Your ref: GW2 Appeal

19 January 2023

Dear Madam

**TOWN AND COUNTRY PLANNING ACT 1990 – SECTION 78
APPEAL MADE BY THE MINISTRY OF JUSTICE
LAND ADJACENT TO HMP GARTH AND HMP WYMOTT, LEYLAND, LANCASHIRE
APPLICATION REF: 21/01028/OUTMAJ**

This 'minded to grant' decision was made by Lee Rowley MP, the Parliamentary Under Secretary of State for Local Government and Building Safety, on behalf of the Secretary of State

1. I am directed by the Secretary of State to say that consideration has been given to the report of Tom Gilbert-Wooldridge BA (Hons) MTP MRTPI IHBC who held a public local inquiry on 12-15, 19-20 and 22 July 2022 into your client's appeal against the decision of Chorley Borough Council to refuse your client's hybrid planning application seeking outline planning permission (with all matters reserved except for means of access, parking and landscaping) for a new prison (up to 74,531.71 sqm GEA) (Class C2A) within a secure perimeter fence following demolition of existing buildings and structures and together with associated engineering works; outline planning permission for a replacement boiler house (with all matters reserved except for access); and full planning permission for a replacement bowling green and club house (Class F2(c)) in accordance with application Ref. 21/01028/OUTMAJ dated 24 August 2021.
2. On 29 June 2022 this appeal was recovered for the Secretary of State's determination, in pursuance of section 79 of, and paragraph 3 of Schedule 6 to, the Town and Country Planning Act 1990.

Inspector's recommendation and summary of the decision

3. The Inspector recommended that the appeal be dismissed.
4. For the reasons given below, the Secretary of State has decided to give the appellant and other parties the opportunity to provide further evidence on highways issues, and allow parties to respond to any such evidence, before reaching a final decision on this appeal. Subject to being satisfied that these matters can be satisfactorily addressed, the Secretary of State is minded to allow the appeal and grant planning permission, subject

Department for Levelling Up, Housing & Communities

to conditions. A copy of the Inspector's report (IR) is enclosed. All references to paragraph numbers, unless otherwise stated, are to that report.

Matters arising since the close of the inquiry

5. One representation has been received since the inquiry, as set out at Annex A. A copy of this representation may be obtained on request to the email address at the foot of the first page of this letter.
6. The Secretary of State is satisfied that the issues raised do not affect his decision, and no other new issues were raised in this correspondence to warrant further investigation or necessitate a referral back to parties.

Policy and statutory considerations

7. In reaching his decision, the Secretary of State has had regard to section 38(6) of the Planning and Compulsory Purchase Act 2004 which requires that proposals be determined in accordance with the development plan unless material considerations indicate otherwise.
8. In this case the development plan consists of the Central Lancashire Core Strategy 2012 (CLCS), the Chorley Local Plan 2012-2026 (CLP), the Joint Lancashire Minerals and Waste Core Strategy 2009 (MWCS), and the Joint Lancashire Minerals and Waste Site Allocation and Development Management Policies Parts 1 and 2 2013 (MWSA).
9. The Secretary of State considers that relevant development plan policies include those set out at IR3.2-3.4.
10. Other material considerations which the Secretary of State has taken into account include the National Planning Policy Framework ('the Framework') and associated planning guidance ('the Guidance').

Emerging plan

11. The emerging plan comprises the Joint Local Plan for Central Lancashire (JLPCL). Preparation has also begun on a new Local Plan (nLP) to replace the MWCS and MWSA.
12. Paragraph 48 of the Framework states that decision makers may give weight to relevant policies in emerging plans according to: (1) the stage of preparation of the emerging plan; (2) the extent to which there are unresolved objections to relevant policies in the emerging plan; and (3) the degree of consistency of relevant policies to the policies in the Framework. Given the early stage of preparation the Secretary of State agrees with the parties (IR3.5) that the emerging JLPCL should be afforded limited weight. As no progress has been made on the nLP since 2018 the Secretary of State agrees with the parties that no weight should be afforded to it (IR3.5).

Main issues

Green Belt openness and purposes

13. There is no dispute that the proposal would represent inappropriate development in the Green Belt (IR13.4). While the Secretary of State agrees (IR13.5) that part of the appeal site comprises previously developed land as set out in CLP Policy BNE5, for the reasons

given at IR 13.4-13.5 the Inspector agrees that in spatial terms the proposal would cause significant harm to openness. He further agrees, for the reasons given at IR 13.6-13.7, that there would be a significant effect on openness in visual terms. For the reasons given at IR13.8 he agrees that the proposal would result in a significant conflict with the Green Belt purpose of safeguarding the countryside from encroachment. As such he agrees (IR13.9) that the proposal would have a significant harmful effect on the openness of the Green Belt and would cause significant conflict with one of the five Green Belt purposes as set out in paragraph 138 of the Framework. He further agrees (IR13.87) that this harm should attract substantial weight against the proposal.

Character and appearance

14. For the reasons given at IR13.10-13.17 the Secretary of State agrees (IR13.17) that there would be a significant harmful effect on the character and appearance of the area, contrary to CLP Policy BNE1(c). He further agrees that this carries significant weight in the overall planning balance (IR13.17).

Highway safety

15. The Secretary of State has had regard to the Inspector's analysis of highway safety at IR13.18-13.36. He notes at IR13.24 that while there is reference to reviewing and amending existing road markings at the junction, and additional measures are proposed, there are no drawings or agreements with the LHA on specific details. He further notes that the appellant does not propose to provide footways linking the northbound bus stop to the footway on Moss Lane, meaning that people would continue to walk in the road or on the verge to access bus services. For the reasons given at IR13.22-13.24, he agrees that there would be an increased risk of vehicle and pedestrian conflicts at the junction that would not be adequately mitigated. For the reasons given in IR13.27, he agrees with the Inspector that vehicles would still be tempted to speed further south on Moss Lane. He further notes that there is no design for a mini-roundabout and no modelling of the effects it would have with the development in place; and no evidence of any costings (IR13.29). The Secretary of State agrees at IR13.29 that in the absence of costings, it cannot be concluded that the financial contribution would meet the statutory tests, and like the Inspector he does not consider it can be taken into account. In addition he notes that no information has been put forward on timescales for completion of the A581 improvement scheme (IR13.30). For the reasons given at IR13.28-13.32, he agrees that it has not been demonstrated that the works would resolve capacity issues or that the financial contribution would be sufficient.
16. In terms of construction phase effects, he notes at IR13.33 that construction traffic has not been modelled or assessed by the appellant. For the reasons given at IR13.33-34 he agrees (IR13.34) that it has not been demonstrated that highway effects of the construction phase can be adequately mitigated.
17. Overall, the Secretary of State agrees that the proposal would exacerbate existing hazards and risks within the local road network, where the appellant's evidence on the proposed mitigation measures is lacking in detail and confidence that they would have the desired effects (IR13.35). As such, on the basis of the evidence before him, he agrees (IR13.35) that the proposal would have an unacceptable effect on highway safety contrary to CLP Policy BNE1(d) and paragraphs 110 (d) and 111 of the Framework. He further agrees that on this basis, this matter should carry substantial weight against the proposal (IR13.87).

18. However, the Secretary of State has taken into account that these conclusions are based largely on a lack of evidence about modelling, detailed proposals, timescales and costs. He considers that it is possible that the highway safety issues could be satisfactorily addressed such that he could be satisfied that the proposal would no longer have an unacceptable impact on highway safety in terms of paragraph 111 of the Framework. He has therefore decided to give the appellant and other parties the opportunity to provide further evidence on highways issues, including in relation to an amended s.106 planning agreement, and allow parties to respond to any such evidence before reaching a final decision on this appeal. This should address the gaps in the evidence which are noted in paragraphs 15 and 16 above and any further evidence which parties consider is relevant to this matter. As the question of whether Condition 4A or 4B should be imposed turns on the question of whether the impacts of construction traffic would be appropriately mitigated (IR13.36), he further invites parties to set out their views on this matter.

Living conditions

19. For the reasons set out by the Inspector at IR 13.37-13.45, the Secretary of State agrees that there would be some adverse effect from the proposal on the living conditions of occupiers of Windy Harbour in terms of noise and disturbance from operational and construction traffic, with the potential for further adverse effects if on-street parking took place on adjoining roads (IR13.45). However, he further agrees, notwithstanding some uncertainties regarding the traffic data underpinning the noise modelling, that none of the modelled levels would equate to a significant or unacceptable adverse effect level, and thus agrees that there would be no conflict in that regards with CLP Policy BNE1(g) (IR13.45). He therefore agrees that the overall effect of the proposal on the living conditions of occupiers of nearby properties with regards to noise and disturbance would be acceptable (IR13.45).

The need for the development

20. The Secretary of State has had regard to the Inspector's analysis on the need for the development at IR13.46-13.68 and 13.71. He notes that there is no dispute between the main parties that the prison population is due to increase in the next decade and that the refurbishment and expansion of existing prisons would not meet all of this demand (IR13.46). He agrees (IR13.57) that there is an obvious need to update existing prison facilities and to provide the right prisons in the right locations. For the reasons given at IR13.48-13.56, the Secretary of State agrees at IR13.57 that there are several uncertainties with the projections of prison places nationally, the future capacity of the system, and the regional capacity gap.

21. However, the Secretary of State considers that some uncertainties are inevitable in the case of any projections, and notes that this is also accepted by the appellant (IR13.47). He has further taken into account that the appellant's projections are based on a suite of modelling tools along with experience and judgement. They are signed off by senior leadership in the MoJ, the Home Office and the Crown Prosecution service, are subject to external scrutiny from the Treasury, and have National Statistic status (IR13.47). As such, and notwithstanding some inevitable uncertainties, the Secretary of State considers that the appellant's projections have been through a rigorous and robust process, and represent strong evidence of need. He has further taken into account the existence of a large number of Category C male prisoners with less than 24 months left on sentences, who have a North-West home address but are being held in prisons outside the region (IR13.55). Like the Inspector he considers that it is evident that prisoners in this situation would benefit from serving the resettlement stage of their

sentence closer to home, to better reintegrate into local communities (IR13.55). While he accepts that this prison would not be open in time to meet the needs of this specific cohort, he considers that it is likely that this trend would continue into the future, and considers that this strengthens the need case for the current proposal. He further notes that the parties agree that there is a specific need for new Category C resettlement prison places in the North West (IR13.46). Overall he attaches significant weight to the need for this proposal.

Alternative sites

22. For the reasons given at IR13.58-68, the Secretary of State agrees with the Inspector in giving little weight to the appellant's propositions that there is a lack of alternative sites or that there are no more appropriate sites than the appeal site.

Economic benefits

23. For the reasons given at IR13.69-13.70, the Secretary of State agrees that the proposal would result in significant employment and investment, and agrees that significant weight should attach to the economic benefits.

Social benefits

24. The Secretary of State agrees with the Inspector (IR13.71) that the provision of a modern prison would enable greater social benefits for prisoners to help with their rehabilitation and reduce reoffending rates. He agrees with the Inspector that this carries significant weight.

25. He agrees that the replacement of the bowling ground and new club house should be afforded significant weight, for the reasons given at IR13.72. For the reasons given at IR13.73 he agrees that the upgrades to Pump House Lane as a public right of way along with improvements in bus and cycle provision should be afforded moderate weight.

Environmental benefits

26. The Secretary of State agrees, for the reasons given at IR13.74, that the environmental benefits including biodiversity net gain, the re-use of previously developed land within the site and the proposed BREEAM ratings would collectively attract moderate weight. He further agrees that the absence of harm to matters as flood risk, air quality, ecology and land contamination are neutral in the planning balance.

Other matters

27. For the reasons given at IR13.75-13.76 the Secretary of State agrees that the negative effects from a sustainability perspective having regard to the carbon footprint of extra car journeys carries moderate weight against the proposal.

28. For the reasons given at IR13.77 he agrees that the loss of best and most versatile (BMV) agricultural land attracts only limited weight against the proposal. In regard to potential mineral extraction, as set out at IR13.77, he notes that the parties agree (IR6.23) that the site is located within a mineral safeguarding area and that it is not possible to extract the minerals before the development due to the location of the existing prisons. As such he concludes that as these minerals cannot be extracted, the the loss of extraction is purely theoretical and thus attracts no weight. For the avoidance of doubt, were he to agree with the Inspector on the weight to be given to this issue, he would also

agree that the need for development would outweigh any harm such that there would be no conflict with MWSA Policy M2 (IR13.77).

29. For the reasons given at IR13.80, the Inspector agrees that the loss of a playing field would be contrary to paragraph 99 of the Framework, and CLP Policy HW2, and agrees that this carries moderate weight against the proposal.
30. He agrees with the Inspector at IR13.81 and IR13.88 that the loss of a non designated heritage asset attracts minor weight against the proposal.
31. For the reasons given at IR13.78 he agrees that there are no long term ecological effects that would count against the proposal. He further agrees, for the reasons given at IR13.79, that there would be a reasonable prospect of Natural England granting a licence for the proposal.
32. For the reasons given at IR13.82-13.85 he considers that the matters set out here are neutral in the planning balance.

Planning conditions

33. The Secretary of State has given consideration to the Inspector's analysis at IR12.1-12.2, the recommended conditions set out at the end of the IR and the reasons for them, and to national policy in paragraph 56 of the Framework and the relevant Guidance. He is satisfied that the conditions recommended by the Inspector, other than those relating to highways matters, comply with the policy test set out at paragraph 56 of the Framework. However, given the lack of details of mitigation in relation to highways safety, the Secretary of State does not propose to reach a conclusion on conditions relating to highways matters, including 4A or 4B, at this time. He will reach a conclusion on these or any other conditions which are put forward regarding highway matters when he reaches his final determination.

Planning obligations

34. Having had regard to the Inspector's analysis at IR12.3-12.9 the planning obligation dated 23 August 2022, paragraph 57 of the Framework, the Guidance and the Community Infrastructure Levy Regulations 2010, as amended, the Secretary of State agrees with the Inspector's conclusion for the reasons given in IR12.9 that the obligation complies with Regulation 122 of the CIL Regulations and the tests at paragraph 57 of the Framework, with the exception of the A581 contribution (Schedule 7, paragraph 4). The matter of Schedule 7, paragraph 4 or any other proposed amendments to the planning obligation dealing with highway matters will be addressed when the Secretary of State makes his final decision.

Planning balance and overall conclusion

35. For the reasons given above, the Secretary of State considers that the appeal scheme is not in accordance with BNE1(c), BNE1(d) and HW2 of the development plan, and is not in accordance with the development plan overall. He has gone on to consider whether there are material considerations which indicate that the proposal should be determined other than in line with the development plan.
36. Weighing in favour of the development is the need for the development which attracts significant weight, the benefits associated with a modern prison which attracts significant weight, the economic benefits which attract significant weight, the replacement bowling

green which attracts significant weight, upgrades to Pump House Lane which attract moderate weight, and the environmental benefits which attract moderate weight. The lack of alternative sites carries little weight.

37. Weighing against the proposal is the harm to the Green Belt which attracts substantial weight, the harm to the character and appearance of the area which attracts significant weight, the highway safety harm which attracts substantial weight, the negative effects from a sustainability perspective having regard to the carbon footprint of additional car journeys which attract moderate weight, the loss of the playing field which attracts moderate weight, the heritage harm from the loss of a non-designated heritage asset which is attributed minor weight, and the loss of BMV agricultural land which attracts limited weight.
38. The Secretary of State concludes that, on the evidence before him, the harm to the Green Belt and the other harms he has identified are not clearly outweighed by the benefits set out above. As such he concludes that very special circumstances justifying approval do not exist, and that thus material considerations do not justify a decision other than in line with the development plan.
39. However, as set out above the Secretary of State considers that the highway safety issues may be able to be resolved satisfactorily. If that were the case, he considers that benefits above would be sufficient to clearly outweigh the Green Belt harm and the remaining other harms, such that very special circumstances would exist, and that material considerations would justify a decision other than in line with the development plan.
40. The Secretary of State therefore considers, as set out in paragraph 18 above, that the appellant and other parties should be given the opportunity to provide any further evidence on highway safety, and that parties should be able to make representations on this further evidence before he reaches a final decision on this appeal. Subject to being satisfied that the highway safety issues identified by the Inspector can be satisfactorily addressed, the Secretary of State is minded to allow the appeal and grant planning permission subject to conditions.
41. The Secretary of State considers that given the nature and amount of work required, a period of six weeks would be appropriate to allow this additional evidence to come forward. He therefore requests the appellant and other parties to provide any additional evidence on these matters by **2 March 2023**. Evidence put forward will then be circulated for parties for comment before the Secretary of State proceeds to his final decision. Please note that this request for further evidence is solely for the purpose stated above, and is not an invitation for any party to seek to reopen any of the other issues covered in this decision letter.
42. In the light of the above, it will not be possible to reach a final decision on this appeal by the previously advised target date of 19 January 2023. Therefore, in the exercise of the power conferred on him by paragraph 6(2) of Schedule 2 to the Planning and Compulsory Purchase Act 2004, the Secretary of State hereby gives notice that he has varied the timetable previously set and he will now issue his decision on or before 19 April 2023.
43. A copy of this letter has been sent to Chorley Borough Council and the Ulnes Walton Action Group and notification has been sent to others who asked to be informed of the decision.

Yours faithfully

Phil Barber

Decision officer

Land adjacent to HMP Garth and HMP Wymott, Leyland, Lancashire

- The appeal is made under section 78 of the Town and Country Planning Act 1990 against a refusal to grant outline and full planning permission.
- The appeal is made by the Ministry of Justice against the decision of Chorley Borough Council.
- The application Ref 21/01028/OUTMAJ, dated 24 August 2021, was refused by notice dated 22 December 2021.
- The development proposed is a hybrid planning application seeking outline planning permission (with all matters reserved except for means of access, parking and landscaping) for a new prison (up to 74,531.71 sqm GEA) (Class C2A) within a secure perimeter fence following demolition of existing buildings and structures and together with associated engineering works; outline planning permission for a replacement boiler house (with all matters reserved except for access); and full planning permission for a replacement bowling green and club house (Class F2(c)).

Summary of Recommendation: That the appeal be dismissed.

1. Procedural Matters

1.1. The original planning application was reported to the Council's Planning Committee on 21 December 2021. Members resolved to refuse outline and full planning permission for the following reasons¹:

- 1) The proposed development would have a greater impact on the openness of the Green Belt and the purpose of including land within it than the existing development on that part of the site that is previously developed and would encroach onto open countryside and is inappropriate development in the Green Belt. Substantial weight attaches to the harm to the Green Belt by reason of inappropriateness and further harm arising here by reason of the impact of the proposed development on the openness of the Green Belt and encroachment. The benefits associated with the proposed development would not clearly outweigh the resulting harm and, therefore, do not constitute, individually or cumulatively, very special circumstances required if inappropriate development is to be approved in the Green Belt in accordance with paragraph 148 of the National Planning Policy Framework.*
- 2) The proposed development would have an unacceptable impact on highway safety by virtue of the increased traffic movements and inadequate highway infrastructure, contrary to paragraph 109² of the National Planning Policy Framework and Policy BNE1 of the Chorley Local Plan 2012 – 2026.*
- 3) The potential noise nuisance and disturbance associated with the vehicular traffic movements that would be generated throughout the use of the development would result in a harmful impact on the amenity of*

¹ Core Document (CD) A100

² This is an erroneous reference to a paragraph in the 2019 version of the National Planning Policy Framework. The equivalent paragraph in the 2021 version is paragraph 111.

residents in the locality contrary to Policy BNE1 of the Chorley Local Plan 2012 – 2026.

- 1.2. On 29 June 2022, the Secretary of State (SoS) directed that he would recover this appeal for his own determination. The reasons for this direction are that the appeal involves proposals for development of major importance having more than local significance, proposals against which another Government department has raised major objections or has a major interest, and proposals for significant development in the Green Belt. These are three of the grounds set out in the guidelines for recovering appeals in the Ministerial Statement of 30 June 2008.
- 1.3. The Inquiry sat for 7 days on 12-15, 19-20 and 22 July 2022. The Ulnes Walton Action Group (UWAG) representing local and community views acted as a Rule 6 party at the Inquiry. The Inquiry closed in writing on 1 September 2022 once the completed and executed Section 106 (S106) agreement had been received³.
- 1.4. There is a minor error in the completed and executed S106 agreement as the definition of 'development' on page 4 refers to the wrong schedule with the relevant (fifth) schedule missing. On 29 September 2022, the appellant provided a handwritten amendment to the definition on page 4 along with a copy of the missing fifth schedule⁴. However, a S106 agreement can only be varied via a deed and so it is not possible to substitute the document in CD K27 for the document in CD K28. Nevertheless, the error is not fundamental as the definition of 'development' also refers to the development proposed in 'the Application' which is set out on page 3 with the correct description. Therefore, the S106 agreement in CD K27 remains effective.
- 1.5. I carried out an unaccompanied pre-inquiry familiarisation visit on 11 July 2022 and an unaccompanied evening visit on 19 July 2022 to see lighting levels at night. An accompanied visit to the site and surrounding area (including parts of HMP Wymott) took place on 21 July 2022. I also carried out unaccompanied visits to land south of Stakehill Industrial Estate and land adjacent to HMP Kirkham on 14 and 18 July 2022 respectively.
- 1.6. The Council confirmed in a screening opinion dated 8 September 2021 that an Environmental Impact Assessment was not required for the proposed development. The Planning Inspectorate's Environmental Services Team agreed with the Council in a screening matrix dated 16 May 2022. While the proposed development falls within the definition of Schedule 2 of the Town and Country Planning (Environmental Impact Assessment) Regulations 2017 due to its size, it would not give rise to significant environmental effects having regard to the relevant criteria in Schedule 3 of the same regulations. Accordingly, no Environmental Statement is required.
- 1.7. During the Inquiry, the Council confirmed that the third reason for refusal no longer formed part of its case. However, UWAG and interested parties continued to raise concerns relating to this matter and so it has been considered as part of my report.

³ CD K27

⁴ CD K28

1.8. A revised phasing plan was submitted during the Inquiry⁵. This simply clarifies that the phases would take place in numerical order as stated in other documents. This revision does not prejudice any interested party and so I have accepted it as an amended plan.

2. The Site and Surroundings⁶

- 2.1. The appeal site comprises 4.5ha of land surrounding HMP Garth and HMP Wymott. HMP Garth is an 850 capacity Category B men's prison and HMP Wymott is a 1,100 capacity Category C men's training prison. The site and existing prisons are on land which was formerly an army ammunition depot. Remnants of depot buildings and structures are visible in the landscape to the north of the site.
- 2.2. The site is located within the countryside and the Green Belt. There are no listed buildings on site and the nearest are 580m to the east and 600m to the south. The site is not in a conservation area and does not include or form part of a scheduled monument. The site is not a designated nature conservation area. The majority of the site is within Flood Zone 1 with only a small strip along the north-west margin, where no built development is proposed, in Flood Zone 2. Most of the northern part of the site is within a mineral safeguarding area.
- 2.3. The site is partly in agricultural use, including associated farm buildings, and partly in use for ancillary prison purposes, including a boiler house with a biomass boiler and tall flue which serves both prisons. Part of the site is open grassland, including fields to the south of the roundabout on the internal access road to the existing prisons. An L shaped belt of mature trees runs along the northern site boundary before turning southwards and separating the agricultural area from the existing boiler house.
- 2.4. Pump House Lane dissects the eastern part of the site, running north from Willow Road. It then splits, heading west to Ridley Lane or north to Nixon Lane. The lane is considered to be an unadopted bridleway and has been treated as a prescriptive right of way. A footpath running east-west along the southern boundary of the proposed prison between Willow Road and the existing boiler house has also been treated as an unadopted right of way for this scheme. There is a third public footpath running east-west from the internal access road roundabout to the woodland at Stanning's Folly in the southern part of the site.
- 2.5. Wymott Bowling Club is located on the eastern side of the site at the junction of Pump House Lane and Willow Road. A pumping station is situated just to the north of the bowling club. A former ammunitions storage building and man-made mound is located in the north-east corner of the site. Part of the site presently provides a playing field and recreation space within the perimeter fence of HMP Wymott. A residential area comprising around 130 houses adjoins the site to the east of the bowling club and to the north of Willow Road. Otherwise, the land surrounding the prison complex is predominantly agricultural. At the junction of Moss Lane and Ulnes Walton Lane is Longton Riding Club showground.

⁵ CD K15

⁶ Largely taken from Section 2 of the Statements of Common Ground (SOCG) (CD C7 and CD C8)

- 2.6. The site is a few miles to the south-west of Leyland, where the nearest junction of the M6 is located (junction 28). The larger settlements of Preston and Blackburn are located to further to the north and north-east respectively. The conurbations of Liverpool and Manchester are to the south-west and south-east respectively. The site and existing prisons are accessed via Moss Lane which also affords access to the housing referred to above. Moss Lane connects with Ulmes Walton Lane which provides a north-south route between Leyland and the A581. On the built-up edge of Leyland (Moss Side), the lane changes name to School Lane before it reaches the junction with Dunkirk Lane. The A581 connects Chorley to the A59 at Rufford.
- 2.7. The nearest railway station is at Croston, about three miles by road to the south-west. The station is part of the branch line between Preston and Ormskirk. It has an hourly service in each direction from early morning to late evening during the week, and less frequent services at the weekend. There is a mainline railway station at Leyland about five miles away. There is a regular hourly bus service from the existing prisons to Leyland town centre (Mondays to Saturdays) with an onward 15 minute walk to the railway station. The bus service operates a one-way loop from Leyland (Moss Side) around Croston to the prisons. There are bus stops on Willow Road and Ulmes Walton Lane.

3. Planning Policy

- 3.1. The adopted development plan comprises the Central Lancashire Core Strategy 2012 (CLCS), the Chorley Local Plan 2012-2026 (CLP), the Joint Lancashire Minerals and Waste Core Strategy 2009 (MWCS), and the Joint Lancashire Minerals and Waste Site Allocation and Development Management Policies Parts 1 and 2 2013 (MWSA). The parties agree that there are a number of relevant policies⁷ in each document. The most pertinent to this appeal are set out below. Apart from those policies specified in the reasons for refusal, the parties agree that the proposal accords with all of the other relevant policies in the adopted development plan.
- 3.2. CLP Policy BNE1 is the only development plan policy referenced in the reasons for refusal. It states that planning permission will be granted for new development provided that it meets relevant design criteria. Criterion (b) requires that development would not cause harm to any neighbouring property by virtue of overlooking, overshadowing or being overbearing. Criterion (c) requires the layout, design and landscaping to be of a high quality that respects the character of the site and local area. Criterion (d) seeks, amongst other things, that the residual cumulative highways impact of the development is not severe and that it would not prejudice highway safety, pedestrian safety or the free flow of traffic. Criterion (g) requires that proposals would not cause an unacceptable degree of noise and disturbance to surrounding land uses.
- 3.3. The parties agree that most of the appeal site is allocated as a Previously Developed Site within the Green Belt as defined by CLP Policy BNE5 (with the exception of land to the east of Pump House Lane and land to the south of the roundabout). The policy permits the re-use, infill or redevelopment of such sites provided that a number of criteria are met including, in the case of infill, that there is no greater impact on Green Belt openness and purposes.

⁷ See paragraph 6.6 in CD C7 and paragraph 4.6 in CD8 for the full list

- 3.4. Ridley Lane and part of Pump House Lane are allocated as part of a new cycle route between Leyland, Ulmes Walton and Croston by CLP Policy ST1 which, amongst other things, seeks to prevent development that would prejudice the implementation of such routes. CLP Policy HW2 looks to protect existing open spaces, sport and recreational facilities, unless a number of criteria can be met. Part of the appeal site is also allocated as a Mineral Safeguarding Area. MWSA Policy M2 aims to prevent to loss of minerals unless one or more criteria apply, including the need for the development outweighing the sterilisation of the resource.
- 3.5. Preparation has begun on a Joint Local Plan for Central Lancashire but this remains at an early stage and the parties agree it should be afforded limited weight. Preparation has also begun on a new Local Plan to replace the MWCS and MWSA but no progress has occurred since 2018 and so the parties agree that no weight should be afforded to it.
- 3.6. There are a number of paragraphs in the National Planning Policy Framework 2021 (NPPF) of particular relevance. NPPF paragraph 81 states that significant weight should be given to supporting economic growth and productivity. NPPF paragraph 99 sets out that existing open space, sports and recreational buildings, including playing fields, should not be built on unless specific criteria are met in (a) to (c).
- 3.7. NPPF paragraph 110 sets out the highway matters that should be considered when assessing development proposals including (a) appropriate opportunities to promote sustainable transport modes can be taken up; (b) safe and suitable access to the site can be achieved for all users; and (d) any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree. NPPF paragraph 111 states that development should only be prevented or refused on highway grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network would be severe. NPPF paragraph 113 notes that all developments that generate significant amounts of movement should provide a travel plan and be supported by a transport statement or assessment so that likely impacts can be assessed.
- 3.8. NPPF paragraph 137 states that the government attaches great importance to Green Belts and that the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. NPPF paragraph 138 notes that Green Belt serves five purposes, including safeguarding the countryside from encroachment. NPPF paragraph 147 states that inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. NPPF paragraph 148 sets out that substantial weight should be given to any harm to the Green Belt and that very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm resulting from the proposal, is clearly outweighed by other considerations. NPPF paragraphs 149 and 150 set out exceptions to inappropriate development in the Green Belt.
- 3.9. NPPF paragraphs 119 and 120 seek to make effective use of land including suitable brownfield land. NPPF 174(d) requires net gains for biodiversity. NPPF paragraph 203 advises that in weighing proposals that directly or indirectly

affect non-designated heritage assets, a balanced judgment will be required having regard to the scale of any harm or loss and the significance of the heritage asset.

4. Planning History⁸

- 4.1. HMP Wymott was constructed in the late 1970s with replacement wings constructed in the mid-1990s. HMP Garth was completed in the late 1980s with an additional cell block added in the early 2000s. There have been various other alterations and additions to the two prisons during their lifetime.

5. The Proposal⁹

- 5.1. The proposal was submitted as a hybrid application seeking (i) outline planning permission for a new prison within a secure perimeter fence following demolition of existing buildings and structures together with associated engineering works, (ii) outline planning permission for a replacement boiler house, and (iii) full planning permission for a replacement bowling green and club house. The development would take place in four phases¹⁰. Phase 1 would entail enabling/early works including the demolition of existing on-site structures. Phase 2 would involve the construction of the new bowling green and club house. Phase 3 would see the construction of the new boiler house and relocated car park. Phase 4 would be the construction of the new prison.
- 5.2. For the new prison, all matters are reserved apart from means of access, parking, and landscaping. A maximum 74,532sqm of floorspace is proposed across 13 buildings laid out as suggested on the indicative plans. Indicative building parameters have also been provided¹¹. The prison would include an entrance resource hub for visitors and administrative space (three storeys); a support building for administrative functions (two storeys); a central service hub for education, health, multi-faith and staff facilities (two storeys); a kitchen block (two storeys plus mezzanine); a workshop building (two storeys); a care and segregation unit (one storey); and seven 'T60' houseblocks, each with a capacity of up to 245 prisoners (four storeys).
- 5.3. The public areas of the prison would be the car parking area and access points to the entrance resource hub. The hub would include the gatehouse to monitor vehicles entering the secure compound, including prisoner transfers and deliveries. The secure areas of the prison would be enclosed by a perimeter fence up to 5.2m high and would comprise a steel post and weldmesh panel fence with 2.4m high steel sheet in an inner concrete apron. The fence would only be lit internally whilst CCTV cameras would be mounted on columns inside the secure perimeter. There would be various internal fences and gates separating buildings and spaces within the secure compound.
- 5.4. The car park for both staff and visitors would be located in front of the entrance resource hub and would provide 525 parking spaces, including 24 accessible spaces, 53 electric vehicle charging spaces, and 27 spaces for car sharing. There would a 51 space covered cycle parking area.

⁸ More information can be found in Section 2 of the SOCG (CD C7 and CD C8)

⁹ Largely taken from Section 3 of the SOCG (CD7 and CD8)

¹⁰ CD K15

¹¹ See the table after paragraph 3.8 in CD8

- 5.5. A detailed landscaping strategy has been submitted. A tree screen would be retained and enhanced along the northern boundary with a larger area of woodland planting in the north-east corner of the site. There would be new ponds, wildflower meadows, grassland areas, tree planting, and hedgerows across the wider site. Land to the south and west of HMP Garth would be used for compensatory landscape planting and ecological enhancement to deliver a minimum 20% biodiversity net gain on site.
- 5.6. For the boiler house, all matters are reserved except for access. The existing energy centre serving both prisons is oversized and the replacement structure would be smaller in scale. It would be located further to the south on an area of hardstanding, accessed via the existing internal site road. The existing portacabin and car parking would be relocated with no loss of existing parking spaces. The replacement structure is proposed to have a footprint of 41m by 14m and extend to a maximum height of 9m. A single external flue would be no higher than 22m. The exact dimensions of the structure would be established at the reserved matters stage. There would also be two biomass pellet silos up to 5.2m high and two oil tanks up to 2m high.
- 5.7. The existing bowling green facilities would be removed to make way for the new prison. The replacement facilities would be provided at an early stage in the construction process, located to the south of the roundabout on the internal access road. The bowling green has been designed in accordance with national standards and would measure 40m by 40m with a 2m wide hard surface around its perimeter. Four lighting columns would be located around the green and a club house or pavilion would be sited to the east of the green with a footprint of 72sqm and a maximum height of 3.1m. The building would be timber clad with a shallow pitched roof. There would be ancillary storage buildings, spectator shelters and a car park providing 37 spaces including two disabled spaces. New hedgerows and trees are proposed around the bowling green and car park.
- 5.8. The proposal was amended during the application process to allow for the proposed replacement pumping station to be brought into the scope of the application rather than be subject to a future separate application by the water company. The replacement building would be located in the proposed woodland in the north-east corner of the site.

6. Other Agreed Facts¹²

- 6.1. Green Belt: The main parties¹³ agree that the proposal represents inappropriate development in the Green Belt and that substantial weight must be afforded to the harm to the Green Belt in this case. They agree that the proposal would result in harm to Green Belt openness. They also agree that there would only be conflict with one of the five Green Belt purposes, namely safeguarding the countryside from encroachment.
- 6.2. Need: The main parties agree that the prison population is forecast to increase over the next 10 years, although the extent of that growth is not agreed

¹² Largely taken from Section 7 of the SOCG between the appellant and the Council (CD C7) and Section 5 of the SOCG between the appellant and Ulnes Walton Action Group (CD C8)

¹³ Reference to "the main parties" in this report means the appellant, the Council, and UWAG

between the appellant and UWAG. The main parties agree that there is a need for new prisons to be constructed as the refurbishment and expansion of existing prisons cannot meet all of the forecast demand. The main parties agree that the proposal is one of four new prisons which will help to address the demand and that they need to be distributed across the country to best target the areas of greatest demand.

- 6.3. The main parties agree that there is a specific need for new Category C resettlement prison places in the North-West to provide prisoners with the opportunity to develop skills so they can find work and resettle into the community on release. The appellant and UWAG agree that the site search criteria are appropriate.
- 6.4. Socio-Economic Benefits: The main parties agree that the proposal could support 122 (gross) full-time equivalent (FTE) jobs, create 69 (net) FTE jobs and generate a gross value added (GVA) of £117.2 million within the region. The construction phase would support 37 indirect and induced jobs with an additional £35.1 million GVA. This phase would provide training opportunities for people and businesses along with apprenticeships and work placements. The appointed contractor would be obliged to meet key performance targets including 25% local spend within 25 miles of the site; £50,000 spend with voluntary, community and social enterprises; and at least one community project per year.
- 6.5. The main parties agree that 643 permanent jobs are forecast to be created at the prison in a wide range of roles. This equates to a total income of £14.1 million per year of which £12.98 million would be retained locally. It is also agreed that the prison expenditure would lead to indirect impacts. Based on 1,715 prisoners, there would be an annual spend of £13.7 million, of which £2.7 million would be retained locally, and 230 jobs would be supported regionally of which 46 would be at a local level. The regional supply chain spend would equate to £17.9 million supporting 299 jobs regionally. Expenditure of prison staff and visitors would equate to £10.4 million per year with 30 jobs supported.
- 6.6. The main parties agree that the relocated bowling green and clubhouse would represent a substantial qualitative improvement to the current facilities as it would make the facility more attractive to new members, encourage people to keep active, and create a more sustainable future for the club.
- 6.7. Design: The main parties agree that, while the layout and appearance of the new prison are reserved matters, the illustrative plans reflect the necessary functional form of the proposed development. UWAG agrees with the appellant that with reference to the existing two prisons, the design would not be out of keeping with the local built form. UWAG also agrees that the proposed landscaping scheme would soften and filter views of the site from public footpaths and other visual receptors
- 6.8. It is agreed by the main parties that the club house design is a modern and functional facility that is no larger than necessary, with the timber cladding providing a natural finish to blend visually with nearby trees. It is also agreed that the boiler house would be of a lesser scale and its relocation further towards the centre of the site would effectively screen the new built form and limit its impact on the character of the area.

- 6.9. Landscape and Visual Impact: The main parties agree that the proposal would be set against the backdrop of two prisons which comprise extensive and significant built form. The Council agrees with the appellant that there are no landscape designations and the site and surroundings do not comprise a valued landscape for the purposes of NPPF paragraph 174(a). The Council also agrees that the landscape and visual impact assessment has been written in accordance with national guidelines and the viewpoint locations were agreed with its landscape officer. The Council agrees that new tree planting would reduce visual impact and would compensate for the proposed tree losses while extending and diversifying the current arboricultural resource.
- 6.10. Transport and Access: The Council and appellant agree that the approach to the traffic surveys is satisfactory and provides a suitable baseline to assess impacts. The surveys were validated against 2019 survey data shared by the local highways authority. The two parties agree that the approach to committed developments in the Transport Assessment is acceptable. The two parties also agree that the proposal would give rise to a junction capacity issue at the A581 Southport Road / Ulnes Walton Lane junction, requiring mitigation, while a number of transport-related measures would be delivered through a S106 agreement.
- 6.11. Noise, Vibration and Residential Amenity: The main parties agree that there are no concerns regarding the impact of existing noise sources on the proposed development and that a suitable amenity would be achieved for prisoners. They also agree that the illustrative plans demonstrate that the proposal could be designed to avoid concerns regarding overlooking. The appellant concurs with the Council that the nearest dwellings on Wray Crescent would be suitably separated such that there would be no adverse impacts on light or outlook.
- 6.12. The main parties agree that the distance between the proposed site access to the new prison and the nearest windows in the side elevation of the closest dwelling (Windy Harbour) is around 30m. The appellant agrees with the Council that this provides an adequate degree of separation and that views from vehicles leaving the prison site would be fleeting and not dissimilar to existing impacts from pedestrians or vehicles passing along Moss Lane. The appellant and UWAG agree that the garden boundary and driveway entrance to Windy Harbour would be 15m from the proposed car park entrance.
- 6.13. The Council and appellant agree that the impact to the occupants of Windy Harbour from vehicle headlights exiting the new prison would be intermittent and restricted to specific times of day and year. They agree that this impact would not be harmful to the amenity of these occupants given the layout of the property and the proposal by the appellant to provide mitigation such as fencing or planting. Insofar as visual impacts are concerned, the two parties consider the proposal would comply with CLP Policy BNE1(b).
- 6.14. The appellant and UWAG agree that the Noise and Vibration Impact Assessment considered both the operational and construction phases of development, including the generation of road traffic, the siting of the car park and the location of plant equipment as well as the impact of existing noise sources.

- 6.15. Air Quality: The main parties agree that, subject to the proposed mitigation measures, the effects of construction dust would be effectively controlled. The parties also agree that the relocation of the boiler house would not exacerbate air quality impacts and would be likely to reduce them. They agree the impact on air quality at the operational stage including traffic would be negligible, such that no mitigation measures would be required for this stage.
- 6.16. Sport and Recreation: The main parties agree that the site includes a football pitch within the secure fence of HMP Wymott and that the pitch is not available for public use. The pitch would be lost to the new prison car park and not replaced, so the main parties agree this would conflict with CLP Policy HW2. The appellant and UWAG agree this would also conflict with NPPF paragraph 99. The Council and appellant agree that the pitch has not been well-used for several years and suffers from poor drainage, while its position close to the secure fence presents a security risk from 'throw overs'. The two parties agree these factors should be considered in the overall balance.
- 6.17. Ecology and Arboriculture: The main parties agree that the ecological surveys undertaken are comprehensive and suitably identify all protected species present at the site. They also agree that it is appropriate for the proposal to use Biodiversity Metric 2.0 rather than 3.0 due to the timescales involved. They agree that there would be a 20.08% net gain in habitats and 11.25% net gain in hedgerows, and that a programme of management and maintenance could be secured to ensure these net gains are maintained for at least 30 years. The main parties agree that the approach to protected species mitigation is broadly acceptable and capable of being secured.
- 6.18. The main parties agree no trees would be impacted by the bowling green or boiler house elements, while the new prison would result in the loss of low and moderate value trees and hedgerows and an area of early mature woodland. The appellant and UWAG agree that there would be a degree of harm to biodiversity in the short to medium term, but subject to mitigation, avoidance and enhancement measures being secured, the proposal would be acceptable in the long term¹⁴.
- 6.19. Flood Risk and Drainage: The main parties agree the site is mostly within Flood Zone 1 and the small area within Flood Zone 2 has no built form proposed within it. They also agree that a safe means of access and egress has been demonstrated and the buildings will incorporate flood resistance and resilience measures. They agree the surface water drainage strategy contains a range of measures to ensure no adverse impact, with no objections from relevant technical consultees¹⁵.
- 6.20. Heritage and Archaeology: The main parties agree that the relevant heritage assets to consider are the listed buildings at Norris Farmhouse and attached barn, the barn to the east of Littlewood Hall Farmhouse, and No 4 Nixon Court, and the non-designated heritage asset comprising the Ministry of Supply Depot. They agree the degree of separation between the site and the listed buildings is such that there would be no meaningful visual connection and thus no harm to their significance. It is agreed that the former depot has some

¹⁴ See CD E2b for further information on ecology matters

¹⁵ See also the appellant's note in CD K21

value and significance, with remnants visible in the surrounding landscape, and that some loss of significance would occur through the removal of one element¹⁶. It is agreed that the loss would be minor/low and that the harm must be taken into account in determining the proposal in line with NPPF paragraph 203.

- 6.21. Ground Conditions: The main parties agree the relevant site assessment did not identify any contamination that cannot be suitably controlled via mitigation measures¹⁷.
- 6.22. Agricultural Land: The main parties agree there is no Grade 1 or 2 agricultural land, with 6% (2.6ha) subgrade 3a land that would be lost to the proposal. The appellant and UWAG agree this loss should be weighed in balance of any other harm while the appellant and the Council agree that the proposal would outweigh this loss.
- 6.23. Mineral Safeguarding: The main parties agree the site is located within a mineral safeguarding area and that it is not possible to extract the minerals before the development due to the location of the existing prisons. The appellant and UWAG agree the loss of minerals is a harm to be weighed in the balance, while the appellant and the Council agree the significant need for the development outweighs that of extracting minerals at the site. All three parties agree there would be no conflict with MWSA Policy M2.
- 6.24. Planning Obligations: The main parties agree there is a requirement for an S106 agreement in order to make the development acceptable.

7. The Case for the Appellant¹⁸

Introduction

- 7.1. The overwhelming benefits of the scheme, which importantly would meet the very substantial and urgent need for a new prison of this type in this location, clearly outweigh the harm. This was the conclusion reached by Council officers. Following extensive pre-application discussions and a thorough consideration of the proposal, the officers' report recommended that permission be granted. An appeal has been made because members disagreed with this expert recommendation. The proposal complies with the development plan and material considerations, in particular the NPPF, also support the grant of permission.

Green Belt policy

- 7.2. The site is located in the Green Belt and is identified as a major previously developed site by CLP Policy BNE5. The policy is permissive and allows redevelopment of such sites where certain criteria are met. It is common ground that the proposal does not meet these criteria. It is also agreed that as the policy is permissive only, the lack of compliance with it cannot and does not displace a conclusion that, as a matter of principle, the proposal complies

¹⁶ See CD K20 for further information on the former depot

¹⁷ See CD A23 and CD K6

¹⁸ Largely taken from the appellant's closing submissions (CD K26)

with the development plan as a whole. The Council's reasons for refusal do not rely on any breach of this policy, only CLP Policy BNE1.

- 7.3. The relevant Green Belt policy is within the NPPF, a highly relevant material consideration in this appeal. It is agreed that the proposal should be assessed as a whole and that it is inappropriate development in the Green Belt triggering NPPF paragraphs 147 and 148. The correct approach to very special circumstances has been addressed by the courts several times¹⁹, where it is established that they do not have to be other than commonplace. The Council's suggestion that very special circumstances will only arise where the benefits are unique is wrong. The other parties' reliance on *Chelmsford* to suggest otherwise should be treated with caution.
- 7.4. UWAG adopted a far more objective approach and accepted that generic benefits, such as economic benefits, are clearly capable of constituting very special circumstances. Little weight should be placed on the Council's assessment of this matter.

Openness and purposes of the Green Belt

- 7.5. The appellant accepts that the significant scale of the proposed built form would inevitably result in a reduction in the spatial openness of this part of the Green Belt and this must weigh against the proposal. However, it is necessary to take into account factors which limit the perceptibility and impact.
- 7.6. First, the majority of the site is previously developed land and there are aspects of the site which already impact on openness both spatially and visually. There are the existing built elements on site including the energy centre, associated hardstandings and storage areas, farm buildings, the disused social club building, the pumping station, Pump House Lane itself, the security fence/wall to the existing prisons, and the sports pitches and associated buildings. Beyond the site, the large-scale built form of the prisons, the adjacent residential area, and the remnant built elements of historic munitions storage also have an influence.
- 7.7. Second, the site is already relatively enclosed by the established woodland and tree belt along the northern boundary and through the centre of the site, other areas of mature vegetation, and the substantial built form of the existing prisons. Together with the low-lying nature of the landscape, there are limited opportunities for wide ranging or long-distance views.
- 7.8. Third, appropriate mitigation means the loss of openness would only be experienced from a limited number of highly localised viewpoints rather than the wider area. The mitigation would include new woodland planting on the northern boundary to bolster filtering and screening of the new built form from the north.
- 7.9. The parties agree that the proposal would only conflict with one Green Belt purpose, namely safeguarding the countryside from encroachment. In relation to the extent of harm here, it is relevant that the majority of the site is previously developed, which means that much of the site has already been

¹⁹ See paragraph 29 of *R (Wildie) v Wakefield Metropolitan District Council* [2013] EWHC 2769 (Admin) (CD K26e) and paragraphs 21-32 of *Wychavon DC v SSCLG* [2008] EWCA Civ 692 (CD K26g)

encroached upon. In addition to the urban influences, level of enclosure and new landscaping planting, the extent of harm to this single purpose is limited.

Landscape character and appearance

- 7.10. The Council's reasons for refusal do not raise any objection in terms of the effect on character and appearance and, unlike the appellant, the Council does not rely on any expert landscape evidence. Positive pre-application meetings were held with the Council's landscape and planning officers to agree the scope of landscape and visual impact assessment (LVIA) and receive feedback on the design and mitigation. The landscape officer accepted the LVIA's findings and the report to committee was positive on this matter²⁰. Given the above, it is difficult to understand how the extensive cross-examination of the appellant's landscape witness by the Council's barrister (and the lengthy section in closing) was justified. That section of the Council's case should be treated with a heavy dose of scepticism.
- 7.11. The site is not subjected to any national or local landscape designations and the appellant contends that the site and local context do not fully represent the published key environmental features of the wider landscape character type²¹. The physical landscape impacts in relation to landform, land use and vegetation are direct and limited to the extent of the site only. In terms of susceptibility, the local context is influenced by the existing prisons which define large lengths of the site's boundaries. There is extensive existing context for the proposed development.
- 7.12. The magnitude of impact is also balanced by the site's relative enclosure which restricts the potential area of influence the proposal would have (see LVIA²² viewpoints 10 and 11). The proposal would not materially harm key environmental features of the wider landscape and the Council's objection that the proposed tree planting would not integrate is without merit. Woodland planting is characteristic of the landscape and is an appropriate means of mitigation²³. The proposed linear planting on the northern boundary is simply an extension of the existing tree belt and the proposed pocket of woodland is a typical landscape feature. Overall, there would be a moderate adverse effect on landscape character in the short term (Year 1) which would reduce to minor to moderate adverse in the longer term (Year 15).
- 7.13. Visual effects have been assessed in the LVIA representative viewpoints. There are no protected key views or vistas. With regard to residential receptors, the impact on private views is limited when assessed against the baseline and taking into account the setback of properties and the setback of taller elements of the proposal. The impact does not come close to materially affecting residential amenity and the Council confirmed there would be no conflict with CLP Policy BNE1(b) in terms of privacy, outlook or light. UWAG agree at least in relation to privacy.

²⁰ CD A97, particularly paragraphs 338-339

²¹ See CD I13 and I14 in relation to the Coastal Plain Landscape Character Type

²² CD A25

²³ CD I14 page 82, second bullet

- 7.14. Recreational receptors comprise users of prescriptive footpaths. Moderate to major adverse effects would occur in the short term for users along Pump House Lane (see LVIA viewpoint 6) with the highest impacts limited to around 300m of the route through the site itself. There would be impacts for users of other prescriptive footpaths, including within the site and close to the proposed bowling green. Significant visual effects within the site are inevitable in any development proposal. The effects would reduce through mitigation planting and the sensitive design of the bowling green and club house where the Council agrees it would blend into the landscape. Some significant visual effects would remain unmitigated within the site, but this is inevitable. Overall, adverse impacts on visual receptors would be limited to recreational receptors near the site's boundaries and on the site itself and would be highly localised.
- 7.15. An assessment of effects on night-time views has been carried out by the appellant²⁴, which shows the impact of prison lighting would not be significant or out of place given the baseline of existing prisons. It would be mitigated by the use of down-lit LED lamps and the existing and proposed tree cover.
- 7.16. In summary, any adverse effects on character and appearance are limited and largely confined to the site itself or to locations very close to it. This significantly tempers the weight to be given to any identified harm, such that this matter does not weigh heavily against the proposal.

Highway safety

- 7.17. NPPF paragraph 111 states that development can only be refused on highway grounds if there would be an unacceptable impact on highway safety or the residual cumulative impacts on the road network would be severe. The Council is clear that its only concern in reason for refusal 2 is highway safety and not the impact on the road network or capacity. There is no allegation from any party that the impact on the network would be severe.
- 7.18. The application was accompanied by a detailed Transport Assessment (TA) (CD A35) and Outline Travel Plan (CD A36), with a Technical Addendum (CD A37) produced in response to the local highway authority (LHA). These documents assessed the impact on the existing network including off-site. A draft Construction Traffic Management Plan (CTMP) (CD K11) has been produced in consultation with the LHA. The above documents are supported by the evidence of the appellant's highways witness, a Chartered Member of the Institute of Logistics and Transport. This is in contrast to the Council's highway witness whose membership of the relevant professional organisations lapsed 10 years ago. The sufficiency of information in a TA is a matter for the expert judgment of the LHA²⁵.
- 7.19. The LHA has judged the development to be acceptable in highways terms, subject to appropriate mitigation being secured. This follows extensive pre-application and post submission discussions²⁶ and a thorough review of the

²⁴ CD E6

²⁵ See paragraphs 128 to 134 of *R (oao Hawkhurst PC) v Tunbridge Wells BC* [2020] EWHC 3019 (Admin) (CD K26c)

²⁶ Three pre-application meetings were held with the LHA to agree the correct scope of assessment, followed by six meetings during the determination period to discuss several topics including agreeing appropriate mitigation measures (CD A35 page 12)

reports by the LHA. The LHA is satisfied that the proposal complies with the NPPF and does not offer any objection to the grant of planning permission²⁷, both in terms of the construction and operational phases of development. It is well-established that the views of an LHA as a statutory consultee should be given great or considerable weight by a decision-maker and a departure from these views requires cogent and compelling reasons²⁸.

- 7.20. There is a link between highway safety and capacity in that if a road is used beyond its design limits then safety issues may occur. The good practice approach is to assess the standard of the road and compare this against the existing road safety record. The evidence here clearly demonstrates that there is no existing safety record of concern and, with appropriate mitigation, the surrounding roads would have sufficient capacity.
- 7.21. There were nine personal injury accidents (PIA) on surrounding roads between 2016 and 2020. To address the Council's concerns that traffic levels for 2020 were suppressed due to Covid, data for 2014-2018 has been provided which shows 10 PIAs in that period. The Council accepted this was not materially different and its earlier concern fell away. The appellant's COBALT assessment²⁹ forecasts 19.4 PIAs across the study area (Moss Lane, Willow Road, Ulnes Walton Lane and School Lane) in the 2016-2020 period. The baseline of 9 PIAs is considerably lower than expected considering existing network characteristics and traffic volumes. This demonstrates an existing substantial headroom in the safety capacity of the area which can safely accommodate more traffic. The Council accepted that the data shows no existing safety issues and assertions regarding alleged near misses are wholly unevicenced.
- 7.22. In response to the Council's criticisms, the appellant has also undertaken a COBALT assessment to forecast the anticipated number of PIAs with and without the proposal³⁰. This shows that for 2025, the increase in traffic associated with the proposal would theoretically generate an additional 0.5 PIA per year. This is still well below expected levels of PIAs and such an increase would not represent an unacceptable impact. In any event, the appellant is also delivering a road improvement scheme to mitigate any impacts.
- 7.23. The Council agrees that the appellant's approach to traffic surveys is satisfactory and provides a suitable baseline to assess the proposal's impacts. The Council also agrees that the approach to committed developments in the TA is acceptable, contrary to the unfounded assertions made by Councillor Michael Green.
- 7.24. The Council's contention that the proposal would have an adverse highway safety impact is not based on existing safety records or forecasts, but purely on the increase in traffic numbers generated by the development, primarily relying on percentage increases. A far better approach would be to assess the existing capacity of each road and model the effect of projected traffic

²⁷ CD E4a Appendix A

²⁸ See paragraph 108 of *East Meon Forge v East Hampshire DC* [2014] EWHC 3543 (Admin) (CD K26b) and paragraph 65 of *Visao Ltd v SSHCLG* [2019] EWHC 276 (CD K26f)

²⁹ COBALT is a software tool for forecasting road accident effects

³⁰ CD K13

increases. The TA modelling demonstrated³¹ that the B5248 Dunkirk Lane/School Lane junction, the Ulnes Walton Lane/Moss Lane junction, and the proposed site access/Moss Lane junction would all operate within capacity with the proposal.

- 7.25. The appellant has also assessed highway link capacity using the Design Manual for Roads and Bridges (DMRB) TA 79/99 Traffic Capacity of Urban Roads³². Although the guidance has been withdrawn, it is appropriate to apply it because the established principles remain true and underpin many transport planning calculations. The assessment is robust and of assistance even though the surroundings roads are more rural than urban. This is because urban characteristics tend to reduce capacity. The assessment demonstrated that none of the roads within the study area would approach their highway link capacity during the AM and PM peak periods. They would remain uncongested following the addition of the traffic generated by the proposal.
- 7.26. The proposal would deliver traffic calming measures along Moss Lane and Ulnes Walton Lane³³ as well as wider Section 278 works³⁴ which have been agreed with the LHA³⁵. These measures would reduce vehicle speeds along both roads and provide a road safety benefit. They were regarded as laudable by the Council's highways witness. In terms of the Council's concerns about the safety impact of increased traffic for residents using the post box and bus stops at the Moss Lane/Ulnes Walton Lane junction, as well as users of public rights of way, the appellant's response is as follows:
- a) As noted above, there would be no highway safety issue at the junction, particularly taking into account the proposed traffic calming measures and the absence of recorded accidents involving pedestrians near this junction;
 - b) There is an existing post box located next to the housing at the northern end of Moss Lane which is more convenient for residents and for staff and visitors to the new prison;
 - c) The proposal would not result in road safety issues for existing users of the bus stop. Crossing the road would not be unsafe and the frequency of pedestrians needing to cross is likely to be very low given the low use of the bus by existing residents (as indicated by one of UWAG's witnesses and the long grass around the bus stop). Staff and visitors to the new prison would use the much closer bus stop at Willow Road;
 - d) The appellant's evidence³⁶ shows that the existing crossing provision of Ulnes Walton Lane for users of the public rights of way remains appropriate given the forecast hourly traffic flow. While this evidence relies on out of date guidance, judging whether a pedestrian crossing is necessary for safety reasons by reference to traffic and pedestrian flows

³¹ CD A35 section 7.3

³² CD E12 section 2.4

³³ CD A37 Appendix B

³⁴ CD E4 section 2.8

³⁵ CD E4a Appendix A

³⁶ CD E12 paragraphs 2.61 to 2.67

remains appropriate in light of up to date guidance³⁷. The Council's evidence does not contain any analysis to show the existing crossing situation would not be appropriate. The Council's highways witness accepted that the nature of the recreational footpaths meant that they would not attract vulnerable users.

- 7.27. The modelling for the A581 Southport Road/Ulnes Walton Lane junction demonstrates that the proposal would have an impact on the free flowing of the junction in the AM peak³⁸. There is agreement with the LHA that the appellant's S106 contributions to help fund the construction of a wider corridor scheme along the A581, to be delivered by the LHA, including a mini-roundabout at this junction, would satisfactorily mitigate this impact. The LHA scheme is understandably not yet fully worked up, but the appellant's highway witness explained that the mini-roundabout (as publicly referenced by the LHA in its business case document to the Department for Transport) would be deliverable and successful. Notably, the LHA's justification for the mitigation is to improve network operation rather than being borne out of any highway safety concerns³⁹.
- 7.28. The capacity issues at the junction are caused by an imbalance of traffic volumes on the junction approaches. A mini-roundabout would effectively re-balance the priorities between the arms of the junction. Moreover, the construction and completion of this scheme would be secured by condition, either prior to occupation of the prison or prior to commencement of the development, depending on the decision-maker's view as to which is deemed necessary (see alternative conditions 4A and 4B). It follows that the decision-maker can be assured that the projected impact in the AM peak would not occur without the appropriate mitigation scheme being in place.
- 7.29. There are no objections to the design of the construction access. The LHA has considered a draft CTMP and is content that construction traffic can be adequately dealt with by mitigation in a finalised CTMP, secured by condition. Temporary construction traffic can be mitigated by temporary measures such as routing, signage, speed limits, banksmen, and managed hours. The criticism that construction traffic has not been modelled and assessed is a non-point in circumstances where, in an average construction month, the volume of such traffic is predicted to be lower than the predicted operational traffic, which has been modelled and assessed. This is the case even when each heavy goods vehicle (HGV) is counted as two vehicles⁴⁰.
- 7.30. While the number of construction vehicles during the peak month would be higher, this would only be for a short period of six weeks. The predicted pinch points in the road network would only occur at the peak hours and construction traffic could be managed to avoid these times. Daily construction traffic numbers in the draft CTMP are based on four weeks and 20 working

³⁷ CD J19 paragraph 13.1.10 and sections 13.3 and 13.4

³⁸ CD A35 Table 7-11

³⁹ CD E4a Appendix A

⁴⁰ When adjusted to take this into account, the daily number of construction vehicles taken from Table 4-2 of the draft CTMP (CD K11) is 573 (i.e. 499 + 73), which equates to 1,144 two way movements. This compares with the figure of 666 for the predicted number of vehicles at the operational stage which equates to 1,332 two way movements.

days per month, when in reality there are more construction days in a month not least due to working on Saturdays. This means the daily construction traffic in the CTMP is likely to be an overestimate. If deemed necessary, mitigation measures for operational traffic could be in place earlier to mitigate for construction traffic.

- 7.31. UWAG's additional highways concerns expressed by Ms Morrissey have been comprehensively rebutted. The speed surveys for Ulnes Walton Lane, with 83.91% of vehicles travelling within the speed limit, were not abnormal (and caution should be given to the reliability of the data from UWAG). Opportunities to promote sustainable transport have been taken up, including measures agreed with the LHA via S106 contributions, and the site would be accessible by a genuine choice of sustainable transport modes. The modal split assumed in the projections has been agreed with the LHA. It assumes more reliance on the car than the Chorley modal split, which itself includes a large rural area in addition to urban areas. It was thus robust and reliable. While deliveries, ambulances and ancillary vehicles are not included in the modelling, these are likely to have a negligible effect as the numbers of such trips are low and would not generally occur in the peak periods.
- 7.32. UWAG accepted that improvements to the bus service to HMP Garth and HMP Wymott is encouraged by CLP paragraph 4.8. As to UWAG's concerns regarding parking provision, the trip generation agreed with the LHA predicts a maximum of 499 vehicles needing car parking at any one time⁴¹. It represents 3 spaces per 5 staff members on site, which is appropriate provision in line with CLP Appendix A⁴². This is comfortably below the 525 spaces which would be provided. Further, the prediction is robust because it assumes that all prisoners would take up their full visitor entitlement of two visits a month, when in reality take-up is likely to be much lower⁴³ and the availability of virtual visiting could lower the number of in-person visits still further.
- 7.33. UWAG's projections of 78 more spaces being required was based on anecdotal discussions with existing prison staff whose shifts meant they were unable to car share. This was not objective or representative evidence, and even if it were, the Travel Plan is able to ensure that shift patterns be arranged to enable car sharing. The appellant would contribute towards the monitoring and enforcement of the Travel Plan. The pedestrian access to the prison would be directly from the proposed car park, meaning the closest place to park would be the car park not on the adjoining roads.
- 7.34. The appellant has addressed all other third party concerns. This included demonstrating that the suggestion by Katherine Fletcher MP (who notably did not object to the principle of the development) of an alternative vehicular site access located to the north-west via Ridley Lane would not achieve a safe and suitable access. There is also no justification for re-opening Midge Hall railway station. Even if it was a viable option, it is less accessible to the proposed

⁴¹ CD A35 section 6.1

⁴² Prisons are not mentioned explicitly in CLP Appendix A, but under Use Class D1 (non-residential institutions), only 1 space is required per 2 staff

⁴³ CD E12 paragraphs 2.2.1 to 2.2.3 notes that at four similar Category 3 resettlement prisons, the take-up of visit entitlement was not higher than 50% in 2019

prison than the existing station at Croston which is nearer and linked to the prison by a bus service.

- 7.35. Overall, the proposal wholly complies with CLP Policy BNE1(d) and NPPF Section 9, and there are no highway matters which weigh against the grant of permission.

Living conditions of nearby occupiers with regard to noise and disturbance

- 7.36. The appellant has undertaken a full assessment of the noise impacts arising from construction and operational road traffic as well as car parking, through the Noise Impact Assessment and the evidence of its noise witness. The evidence follows recognised methodology and guidance for assessing noise impacts. Neither the methodology nor the findings have been substantively challenged. The Council has confirmed that, following confirmation at the Inquiry that it did not offer any evidence to support reason for refusal 3, it has formally withdrawn this reason. It follows that the Council no longer objects on these grounds and no longer contends any conflict with CLP Policy BNE1(g).
- 7.37. UWAG's witness on noise has no noise expertise, her concerns are entirely unquantifiable and bear no relation to any policy or guidance. She fairly conceded that she has no basis for disputing the technical findings of the appellant's noise witness.
- 7.38. The appellant has undertaken noise surveys in the vicinity of the site to assess the baseline situation and has modelled the noise that would be generated by the proposal for existing sensitive receptors. This shows that the noise impact arising from construction and operational road traffic would be moderate for the property known as Windy Harbour on Moss Lane, and negligible to minor for all other residential properties.
- 7.39. The increases in noise levels during the daytime would be below the levels recommended by the World Health Organisation (WHO) and below the level above which adverse effects on health and quality of life can be detected (LOAEL). Road traffic noise associated with the proposal would be present and not intrusive in accordance with Planning Practice Guidance (PPG). Traffic noise during the construction phase, especially the peak period, can be suitably reduced via the CTMP.
- 7.40. Traffic noise associated with the proposal would not exceed the night-time LOAEL, in accordance with WHO guidance. Thus, although associated noise may be noticeable it would not be intrusive and would not result in any change in quality of life. The orientation of first floor windows in Windy Harbour is such that the internal night-time noise levels in bedrooms at this property would in reality be lower than initially assessed.
- 7.41. Technical evidence shows that the average and maximum noise levels associated with the proposed car park at nearby sensitive receptors would be significantly lower than guideline levels. The garden of Windy Harbour is 50m away from the car park entrance. Noise from traffic speeding along Moss Lane is not valid, not least because speeds would inevitably reduce when turning into the development access opposite Windy Harbour
- 7.42. Other living conditions concerns are without merit. There is nothing unusual about living on a street where people walk past and drive with headlights.

There will plainly be no unacceptable impacts on living conditions for occupants of Windy Harbour from car headlights or people walking on the street, considering the setback and orientation of the dwelling, location of habitable rooms and the ability to mitigate any limited impact by closing curtains. There is further no substantive allegation from any party as to harm to residential amenity from overlooking, overshadowing or overbearing.

- 7.43. Overall, the proposal would not cause an unacceptable degree of noise disturbance, either during the daytime or night-time, and there would be no conflict with CLP Policy BNE1(g). This is now common ground with the Council. There are no other factors which would unacceptably affect living conditions. Accordingly, matters relating to the effect on living conditions of nearby occupiers do not provide any justification for refusal.

Need for this development

- 7.44. There is a very substantial and urgent need for the development of additional, better designed, prison places in the North-West region, and the proposal would help to meet this need. This matter was addressed comprehensively in evidence by the appellant's need witness⁴⁴.
- 7.45. There is a large amount of common ground between the main parties on need as set out in the two SOCG⁴⁵. Against this common ground, the dispute between the parties is considerably narrowed. The adult male prison estate is operating close to capacity. As of mid-July 2022, the estate is operating at 98.3% capacity. The projected demand for prison places will soon outstrip supply and there is a need to ensure that there are sufficient prison places of the right type to meet long-term needs.
- 7.46. There is also a need for new, better designed, prisons. Much of the current estate dates from the Victorian era and is difficult to operate and expensive to maintain. The current prison proposals have been designed to hold prisoners in single cell accommodation in a secure environment which enables the delivery of a regime to address their offending behaviour and offer rehabilitation.
- 7.47. The calculation of demand for prison projections uses a suite of modelling tools. In addition to mathematical modelling, judgment and experience play a large part. The total prison population is forecast to increase to a record high of 98,500 by March 2026⁴⁶. As of 10 June 2022, the operational capacity of the system was 82,676 places and at the time of writing the appellant's need proof of evidence, the prison population was 80,115⁴⁷.
- 7.48. At a regional level, the Ministry of Justice (MoJ) estimates a capacity gap of 2,000 prison places in March 2026 that would be served by the proposed prison. In addition, as of May 2022, around 1,350 Category C men with less than 24 months sentence remaining, who had a home address in the North-West, were being held in prisons outside the region. Prisoners, particularly at the resettlement stage of their sentences, need to be held in their home region

⁴⁴ A Deputy Director within the Prison Supply Directorate in His Majesty's Prison and Probation Service, who is the Senior Responsible Owner for the new prisons programme

⁴⁵ CD C7 paragraphs 7.6 to 7.8 and CD C8 paragraphs 5.2 to 5.9

⁴⁶ CD J14 (duplicated at CD G2b)

⁴⁷ CD J13 (duplicated at CD G2f)

in order to improve chances of successfully integrating with their communities and not reoffending when released. By the time of the Inquiry, this number had risen to 1,400 and it was expected to continue to increase.

- 7.49. The appellant fairly acknowledged that there are inherent uncertainties in calculating these projections, given that this obviously relates to crimes which have not yet been committed. Matters such as the change in mix and types of crimes, behaviours of sentencers, efficiencies of the police, and shock events (such as the 2011 riots which resulted in 1,200 additional people in prison in a matter of weeks) are matters which are difficult to model mathematically. Nevertheless, it is crucial that these projections are made on a precautionary basis so that the system can accommodate future changing events, given the dangers that will occur if demand outstrips supply. These include the crowding of prisoners, the expense involved in the use of police cells as a spill over and the early release of prisoners.
- 7.50. Importantly, these projections of need are made using the best available evidence. They are signed off by senior leadership within the MoJ, the Home Office and the Crown Prosecution Service and have National Statistic status meaning that they meet the highest standards of trustworthiness, quality and public value. External scrutiny is also provided by the Treasury, who use these projections to justify signing off spending reviews.
- 7.51. Any deterrent effect as a result of an increase in police would not reduce the number of crimes (out of a much larger pool) which are caught. The easing of Covid restrictions in the Crown Court (which resulted in less courtrooms being available) has been lifted later than anticipated. The appellant's need witness cautioned against reliance on monthly figures as statistically unreliable and explained that this did not capture the particular capacity problems with the adult male estate. As to the House of Commons Report⁴⁸, this makes clear that the challenge of overcoming the Covid backlog is made harder by the urgent need for more prison places which is not being met. The report's criticism of delays in judicial recruitment are addressed in the MoJ's response⁴⁹ to the report and by the further significant financial investment that is being made.
- 7.52. The supply of prison places in the pipeline has been clearly set out. Of the 20,000 places originally planned to be delivered, 3,000 have already been delivered. Of the remaining 17,000 places, 9,000 still do not currently have planning permission. In addition, the planned new prisons are already behind expected delivery due to refusal at local level and progress through the appeal system. It would not be reasonable or prudent to simply rely on these numbers to show an ample supply.
- 7.53. There is no certainty that all existing prison places will remain available in the future given the huge ongoing maintenance need to keep them in operation (£250 million investment per year with £1.3 billion works that need to be done in total) and given the risk of losing places due to other events such as riots.
- 7.54. The grant of permission at HMP Hindley (494 places) and expansion of places at HMP Liverpool does not materially change the picture in the North-West.

⁴⁸ CD G2(d) paragraphs 4 (page 6) and 14 (page 10)

⁴⁹ CD E11

These do not serve the same catchment areas as the prisons on the appeal site. Moreover, HMP Hindley will also contain Category C training places, which cannot be used for Category C resettlement places. The reliance by the Council on such immaterial minor changes in the arithmetic in order to challenge the size of the prison proposed has the effect of acknowledging the urgent need in principle. However, without any expertise or experience, it represents a foolhardy attempt to challenge the judgment, experience, and prudence that plays a large part in projecting need, particularly given the inherent risks in the system (both in terms of increases in prison population, and loss of existing and expected supply) which the prison system needs to be able to accommodate.

- 7.55. Neither the Council nor UWAG, who do not have any expertise in prison population forecasting, have any basis for substantively challenging the MoJ's projections, which show a very substantial and urgent need for a new Category C resettlement prison for up to 1,715 places on the appeal site.

Alternative sites

- 7.56. It is accepted that it is relevant to consider whether the above need can be met on an alternative site. This is because the appeal site is within the Green Belt and because the other main parties, particularly UWAG, have specifically identified two sites which they claim are relevant alternative sites (the Land south of Stakehill Industrial Estate and Land adjacent to HMP Kirkham).
- 7.57. In order to constitute a relevant appropriate site, plainly it must be more acceptable or more appropriate in planning terms than the current site being considered. The correct approach to the relevance of alternative sites has been addressed by the Courts. The judge in *Trusthouse Forte Hotels Ltd v Secretary of State for the Environment* [1986] 53 P&CR 293 set out a number of principles that apply to the assessment of alternative sites⁵⁰. This analysis was recently cited with approval by the Court in *R (Save Stonehenge World Heritage Site Ltd) v Secretary of State for Transport* [2021] EWHC 2161 (Admin)⁵¹. Essentially the same approach was set out by the Court of Appeal in *R (Jones) v North Warwickshire Borough Council* [2001] 2 PLR 59.
- 7.58. Accordingly, the question for the decision-maker in this case is whether there is a more acceptable or more appropriate site elsewhere, other than the appeal site, for meeting the urgent need for a new Category C resettlement prison in this region. To be materially significant, the alternative site has to lack the drawbacks of the appeal site (in this case, its Green Belt status) and has to have "a real possibility of coming about" within the timescales necessary to meet the urgent need. The question is not whether an alternative site is "no worse than" the appeal site, which was the phrasing repeatedly used by UWAG's barrister in questioning. To the extent the phrasing was accepted by the appellant's planning witness does not affect the appellant's case which relies on the correct legal position set out in the caselaw above.
- 7.59. In carrying out this analysis, the reasonableness of the appellant's previous site searches at the feasibility stage and in advance of the appeal submission

⁵⁰ CD K26a page 299 principle (1) and (2) and page 301 principle (6)

⁵¹ CD K26d paragraphs 269 and 270

are relevant to consider. However, the assessment as to whether there is a more acceptable or more appropriate site elsewhere clearly needs to be assessed at the date of this decision on this appeal. The assessment is necessarily high level and cannot realistically descend into anything like the kind of granular detail that would be appropriate if alternative planning applications were pursued and assessed.

- 7.60. The site selection criteria are set out in the evidence of the appellant's need witness⁵² and there is common ground that these criteria are appropriate. The site search process, both at the feasibility stage and as refreshed at the appeal stage, is explained in the evidence of the appellant's planning witness⁵³. At the feasibility stage in 2020, the appellant undertook an extensive site search by contacting local authorities within a 90 minute drive time of Manchester, contacting government departments, and undertaking a site search of private land interests within the 90 minute drive time. A long list of 14 sites was considered plus the land available at HMP Kirkham. Nine of these 15 sites did not meet the mandatory requirements or were not available (see Table 3 of CD E2), so were not shortlisted. The six shortlisted sites (see Table 4 of CD E2), which included the Kirkham site, were then dismissed for site specific constraints.
- 7.61. At the appeal stage, nine sites were shortlisted (see Table 5 of CD E2). This again included the Kirkham site and also included the Stakehill site, which had not been discovered in the 2020 site search. These nine sites were all dismissed due to site specific constraints (see Table 5 of CD E2 and CD E1).
- 7.62. For the sake of clarity and to help the Inquiry, the appellant's planning witness pointed out that paragraph 7.31 of the Planning Statement should be corrected⁵⁴ in order to be consistent with the evidence in her proof. There was nothing controversial about this correction which sought to clarify the process that was followed in shortlisting sites.
- 7.63. Neither of the alternative sites at Kirkham or Stakehill are more acceptable or more appropriate for meeting the urgent need for a new prison. Both of these sites are also in the Green Belt and so would also need to show very special circumstances. This reinforces the point that a Green Belt location is needed for the new prison development. However, these sites are clearly not more acceptable in planning terms than the appeal site, but rather are, at best, the same as the appeal site. For a site to be a relevant alternative site which attracts significant weight in this regard, one would need to show a non-Green Belt site.
- 7.64. For Kirkham, the appellant had a pre-application meeting with, and a formal response from, Fylde Council in 2020⁵⁵. Fylde Council would not support a new prison in this location and its response set out several fundamental concerns.

⁵² CD E3

⁵³ CD E2

⁵⁴ CD A3 paragraph 7.21 second sentence should read "When considered against the mandatory requirements and availability, the shortlist was reduced to five sites and when reviewed against the secondary and tertiary requirements, all sites were ultimately dismissed as one or more significant issues arose".

⁵⁵ CD J2

This included that the site contributed to three Green Belt purposes compared to one purpose for the appeal site; reference to the significant impact on particularly sensitive views in the vicinity of Ribby Hall Village (which includes a heritage asset); and concerns that the existing access would be unlikely to be suitable for construction and operational traffic. This can be contrasted with the positive pre-application engagement with the Council in this appeal⁵⁶, which led to a positive officer recommendation.

- 7.65. Not only is Kirkham not more appropriate than the appeal site, but it also fares considerably worse at least in terms of a high-level assessment. It was wholly reasonable for the appellant not to pursue Kirkham following the pre-application advice. Even if it had been pursued, the indications were that it would almost certainly require an appeal. Given the urgent need for a new prison, it was sensible for the appellant not to pursue this high-risk option. The relevant witnesses for the Council and UWAG agreed with this point, although UWAG's suggestion that the appellant could have made several planning applications on more than one site is not fair and would certainly not be a good use of public money.
- 7.66. The timescales for pursuing an application at Kirkham now (following an appeal decision on this site) would not be appropriate to meet the urgent need for a new prison. Even if permission was granted on appeal for Kirkham, it would likely be 2030 by the time a new prison could accept prisoners.
- 7.67. Stakehill is a draft employment allocation as part of a wider allocation in the emerging Place for Everyone Greater Manchester combined plan. The plan has been submitted for examination with hearing sessions expected in late 2022 and spring 2023. A likely adoption date, given the complexities in the plan, would be late 2024. Any planning application submitted now would likely be refused on grounds of prematurity. The Council's planning witness agreed with this view. Waiting for the plan to be adopted before making an application (which may be protracted given the master planning and design code requirements for the allocation) would likely only result in a prison on this site accepting prisoners in 2030-31. Again, this would not be appropriate to meet the urgent need for a new prison.
- 7.68. Nearby roads are currently unsuitable as a primary access. A new motorway junction, as suggested by UWAG, would be extremely costly and likely involve third party land. Whilst access issues may ultimately be resolved as part of bringing forward the larger allocation, this would inevitably involve considerable investment and delay. Stakehill not more appropriate than the appeal site. Indeed, it is clearly less appropriate.
- 7.69. There are no more appropriate sites than the appeal site to meet the urgent need for a new prison in this region. It has been demonstrated that the development cannot be accommodated on a non-Green Belt site or a more appropriate Green Belt site, and therefore the Green Belt harms from the development would be the inevitable consequence of meeting the urgent need for such a prison anywhere in the North-West. The lack of an alternative site carries significant weight.

⁵⁶ CD A27 paragraph 3.10 third bullet

Benefits of the proposed development

7.70. The economic, social and environmental benefits that would flow from the proposal are overwhelming. The appellant rebuts the Council's argument that they are intrinsically linked to the scale of built development and should be discounted on that basis. The benefits are as much linked to the actual nature of the development (rather than its scale) and, in any event, the harm caused by the scale of development is taken into account on the other side of the balance. Consistent with NPPF paragraph 81, the appellant attributes substantial weight to the significant economic benefits, also dealt with in the unchallenged written evidence of the appellant's economics witness⁵⁷. It is inappropriate for the other main parties to criticise the assessment of the economic benefits in closing in circumstances where the opportunity to cross-examine the appellant's economics witness was not taken up. The economic benefits include:

- a) 122 gross temporary FTE jobs supported during the construction of the development, of which 10% would be for local residents;
- b) Once built and operational, 643 staff are expected to be directly employed at the prison; 347 of these roles (around 54% of all jobs) could be taken by people living in Chorley and South Ribble;
- c) During the construction period there would be an estimated £117.2 million GVA (gross) and construction of the proposed development could support a further £96.5 million turnover/expenditure through the supply chain, of which £32.2 million could be expected to occur at the local level; and
- d) The operational spend of the prison would amount to £13.7 million, supporting 230 jobs at a regional level, and the operational regional supply chain spend would equate to £17.9 million per annum, supporting 299 jobs at a regional level.

7.71. Substantial weight should also be attributed to the social benefits which include:

- a) The delivery of new prison places to meet the substantial and urgent need for new prison places in the North-West, as set out above. The robust site search has shown that there are no alternative sites which are more appropriate for the purpose of meeting this need than the appeal site;
- b) The provision of safe, secure and modern facilities to deliver improved outcomes for prisoners and reduce reoffending rates. This is a significant social benefit in itself, in that the modern design of prisons (compared to older existing designs) achieves good social outcomes through transformative design;
- c) The replacement bowling green would be of at least an equivalent standard, and the new club house would be a significant enhancement to the existing club house provision; and

⁵⁷ CD E2a

- d) The package of measures agreed with the LHA would improve existing highway safety on surrounding roads and would enhance sustainable transport options.

7.72. Moderate weight should be attributed to the environmental benefits which include:

- a) The delivery of a 20% biodiversity net gain as set out in the evidence of the appellant's ecology witness⁵⁸. Notably, the 10% requirement in the Environment Act 2021 has not yet been brought into force and is not currently applicable as law. A net gain of just 1% would be compliant with the encouragement to provide net gains in NPPF paragraph 174(d). Viewed in this context, the delivery of a 20% biodiversity net gain on the appeal site is significant;
- b) The majority of the site is previously development land, and the effective use of such previously developed land is strongly encouraged in NPPF paragraphs 119 and 120. The Council accepted this was a moderate benefit; and
- c) The new prison buildings would also be highly sustainable, and would achieve BREEAM 'Excellent' rating, with endeavours to achieve BREEAM 'Outstanding'.

7.73. Finally, it is noted that there are a number of matters which are matters of agreement with the main parties and which do not weigh against the proposal. These include flooding, heritage, air quality, land contamination and ecology (which were either addressed by the appellant's witnesses on the first day of the inquiry or in written notes in response to queries from the Inspector). Whilst there is some policy conflict caused by the loss of a sports pitch, both of the other parties agreed that this is only of limited weight and no party relies on this as a material policy conflict leading to a breach of the development plan.

The benefits clearly outweigh the Green Belt harm and any other harm, constituting very special circumstances

7.74. The impacts weighing against the proposal are either limited in extent, or non-existent. When considering the impacts, it is important to bear in mind that the development cannot be accommodated on a non-Green Belt site or a more appropriate Green Belt site, and therefore the harms would be the inevitable consequence of meeting the need for such a prison anywhere in the North-West. Set against this are the overwhelming and substantial benefits that the proposal would deliver. All benefits must be weighed in the balance. The approach of the Council's planning witness of discounting certain benefits on the basis that the development is in the Green Belt or because they are generic is not a sound approach and involves double counting of Green Belt harm. Consequently, very limited weight can be given to this skewed balancing exercise.

7.75. The benefits clearly outweigh the Green Belt harm and any other harm, thus constituting very special circumstances justifying development in the Green

⁵⁸ CD E2b

Belt. This was the view reached by Council officers and is a view the appellant endorses. UWAG's planning witness accepted that, if it is concluded that the appellant's site search has been reasonable and if an urgent need for the development is demonstrated, then this would amount to very special circumstances. That is exactly the position here.

- 7.76. Section 38(6) of the Planning and Compulsory Purchase Act 2004 requires that decisions be made in accordance with the development plan unless material considerations indicate otherwise. The proposal complies with the development plan as a whole; there is no breach of CLP Policy BNE1, which is the single policy relied on by the Council in their reasons for refusal. Thus, the clear decision in accordance with the development plan is to grant planning permission. Material considerations do not indicate otherwise; rather material considerations, in particular the relevant parts of the NPPF, further support the grant of permission. On this basis, the appellant respectfully requests that the Inspector recommend that the appeal be allowed and planning permission granted.

8. The Case for Chorley Borough Council⁵⁹

Introduction

- 8.1. This is a large development in the Green Belt, an important project for the appellant, and one which has triggered considerable local interest. The significance of this proposal is reflected in the fact that it has been called in by the SoS. It is not every day that a new prison is proposed in the Green Belt. It would be expected that such a proposal would warrant the highest level of preparation to ensure that every issue was addressed, and that the proper level of scrutiny can be carried out. It is in everyone's interests that, if planning permission is granted, it is done on the most robust of bases.
- 8.2. However, this is not the approach the appellant has taken. Instead, for certain critical areas (transport, alternative sites, and landscape and visual impact) a lighter touch approach has been adopted. One which has meant that there are significant omissions both in the original application and in how the proposal sits today. These omissions form one of the many bases on which the Council will ask the SoS to refuse permission.

Openness and purposes of the Green Belt

- 8.3. It is common ground between all parties that the proposal would be inappropriate development in the Green Belt and would have some impact on openness and purposes. The question for this Inquiry is the level of the impact. The appellant and Council agree that there is a spatial and visual element to openness.
- 8.4. In relation to spatial openness, the approach that should be taken is volumetric i.e. how much of the site is developed before the proposal, and how much would be developed after. Given the level of additional development (on the appellant's calculation 8.41ha of agricultural field being built upon in a 10.27ha area for the new prison alone) it is unsurprising that the Council's

⁵⁹ Largely taken from the Council's closing submissions (CD K25)

planning witness found that there would be a 'significant loss' in spatial terms. This is a point now accepted by the appellant's landscape witness.

- 8.5. The appellant's approach to Green Belt originally formed a section of the LVIA. Green Belt and the impact on it is different from landscape and the impact on its character. Green Belt is not a landscape character designation and should not be treated in the same way. The appellant's landscape witness contended⁶⁰ that the fact the new built form of the prison would not be entirely uncharacteristic with the built form nearby had some relevance to the impact on Green Belt openness. Such a contention is highly unusual and entirely contradictory to the operation of Green Belt policy.
- 8.6. As set out in the NPPF, the fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open. It is often the case that Green Belt adjoins built up areas. If harm could be minimised by developing Green Belt in a manner similar to the built development around it, then this would weaken the protection of Green Belt where it adjoins built up areas. This would frustrate at least three of the five purposes of Green Belt (NPPF paragraph 138(a), (b) and (c)).
- 8.7. This blurred approach also affects the appellant's stance in relation to the visual impact on openness, where they maintained a limited effect would be had. This site is not entirely visually contained. There are two public rights of way that run through it. The bowling green, clubhouse, and mitigation planting, placed into an open countryside view, would have a detrimental effect on openness as perceived from the footpath running adjacent to it. The introduction of the prison would fill a 10.27ha area of the site with an additional 8.41ha of built development.
- 8.8. The visual impact on openness from the new prison would not only be perceived walking north through and away from the site, on a new diverted Pump House Lane running between a prison wall and screening woodland, but also in views looking south. As is illustrated by the modelled LVIA viewpoint 6, the development would fill a previously open landscape, albeit one with low lying prison buildings, with significant and dominating built form. A screening line of trees would not mitigate this effect. There would be a significant impact on visual openness.
- 8.9. Even if the SoS accepted that this site is visually contained, this should not be used as a way of minimising harm to the Green Belt. The appellant's landscape witness' approach is contrary to Sullivan J in relation to the 'death by a thousand cuts' impact in *R (Heath and Hampstead Society) v Camden LBC* [2007] EWHC 977 (Admin)⁶¹. The Green Belt is a diminishing resource which national policy has long held should be given the greatest importance. The appellant cannot avoid the fact that this proposal would have a significant harmful effect on both spatial and visual openness and so there would be a significant loss of openness overall.

⁶⁰ CD A25 paragraph 8.15

⁶¹ CD K25b paragraph 37; the approach was cited with approval in *Turner v SSCLG* [2016] EWCA Civ 466 at paragraph 24

- 8.10. In relation to harm to purposes, the proposal would completely undermine the ability of the site's Green Belt purpose to assist in safeguarding the countryside from encroachment. As the appellant's landscape witness accepted, and as reflected at figure 7 of the LVIA, the north-eastern part of the site where the majority of the prison would go is countryside. The proposal would encroach into it. The same point applies to the bowling club.
- 8.11. The main mitigation relied upon is screening to introduce a new landscape boundary and provide a clear physical limit to the Green Belt. Setting aside the other reasons why screening is not appropriate mitigation in relation to Green Belt, the ineffectiveness of this approach is illustrated by figure 7 of the LVIA. Development would encroach beyond the woodland boundaries to the north of the new bowling club, to the north of the residential area, and to the east of the boiler house. Screening this would not minimise the harm or prevent further encroachment. The proposal would result in significant, not limited, encroachment into the countryside.

Highway safety

- 8.12. The issue of highway safety is one which national policy rightly highlights as an area of critical importance. An unacceptable impact on highway safety is one of the only times that a decision-maker is entitled to refuse an application without going any further (NPPF paragraph 111). It is for this reason that NPPF paragraph 113 requires TAs to assess the likely impacts of a proposal and NPPF paragraph 110(d) requires decision-makers to ensure that any significant impacts on highway safety can be cost effectively mitigated to an acceptable degree. While the latter requirement is not expressly linked to a TA, the appellant's planning witness accepted where a TA is provided it would be the natural place for it to be addressed.
- 8.13. If, at the time of their decision, the Inspector or SoS has a TA which does not properly assess the likely impacts of development, and/or does not provide the evidence to ensure said impacts will be mitigated (and said evidence does not exist elsewhere), the TA would be deficient. This is the case whether the deficiency relates to operational or construction traffic.
- 8.14. The appellant and Council accepted that if the TA is found to be deficient, and that deficiency has not been addressed by the close of the Inquiry, then that entitles the Inspector or SoS to refuse permission under NPPF paragraph 111⁶². This is because the TA and any additional information must together be sufficient to reach a judgment as to whether there would be an unacceptable impact.
- 8.15. The Council's case is that there would be an unacceptable impact on highway safety from the operational phase of the development. There is a critical difference between considering capacity and safety. Safety is not simply a numbers game but requires aligning those numbers with the existing characteristics and usage of a road network. The reliance on revoked government guidance in relation to road capacity reveals a misunderstanding

⁶² See also *Satnam Millenium Ltd v SSHCLG* [2019] EWHC 2631 Admin, paragraphs 58-60 (CD K25a). This case concerned whether residual cumulative impacts would be severe, but there is no reason why the precautionary approach would not equally apply to unacceptable impacts on highway safety.

of the Council's concerns and illustrates that the appellant approaches the issue from the wrong perspective. The Council's evidence should be preferred.

- 8.16. The level of daily trips from the proposal is broadly agreed to be 1,332 (excluding ancillary traffic), which the appellant's highways witness accepted is a significant number. This significant level of trips would be placed on a local network populated by recreational walkers using the public rights of way, cyclists (including those using the Lancashire Cycleway) and equestrians from the various nearby equestrian centres. The characteristics of the road network, coupled with these existing users and the increase of trips, is what leads to an unacceptable impact on highway safety.
- 8.17. Numerous examples could be cited, including the high vehicle speeds on Moss Lane and the non-compliant stretch of Ulnes Walton Lane that forms part of the Lancashire Cycleway. However, the point can be illustrated by the Moss Lane and Ulnes Walton Lane junction. This junction is located where Ulnes Walton Lane bends around a corner after which, if travelling from the south, there is an interaction with vehicles from the north turning right into Moss Lane which have poor forward visibility. The junction has a post box on one side and two bus stops close by. The nearest of these currently serves the prisons and would also serve the bowling club, although there is no existing footway between them forcing people to use the verge or carriageway. This is a very busy junction where factors combine to create a series of significant risks.
- 8.18. The proposal would put 100% of its daily trips through this junction which would be a 48% increase in its use⁶³. The appellant's own capacity modelling shows that the right turn from Ulnes Walton Lane (north) into Moss Lane would be close to capacity at 0.82 Ratio of Flow to Capacity (RFC) and with a Passenger Car Unit (PCU) queue of 4.4⁶⁴. The queue would occur behind the bend limiting its visibility to those travelling from the south. The safety issues this raises are obvious and yet the appellant does not propose any mitigation at this junction beyond the repainting of carriageway markings, the details of which are vague.
- 8.19. Improvement of the Ulnes Walton Lane bus stop, with a new shelter and to be disability compliant, is perhaps laudable in isolation. However, the appellant has refused the LHA's request for a footway to link the bus stop to Moss Lane. To get to the existing prisons or the new bowling club, bus users would still have to navigate the verge or carriageway before crossing Moss Lane. This location would have in the AM peak in one direction an additional four cars a minute to a total of 12 cars a minute or once every five seconds⁶⁵, with no mitigation proposed.
- 8.20. Vagueness has become a defining feature of the appellant's proposed highway mitigations. Only during cross-examination was it revealed that the seemingly promised mitigation scheme for Ulnes Walton Lane south of Moss Lane⁶⁶ was

⁶³ CD F3 paragraph 6.1.1

⁶⁴ CD A35 Table 7-9 (anything below 0.85 RFC indicates that a junction operates within capacity for the assessed flows; anything over 1.0 RFC indicates that a junction is over capacity)

⁶⁵ CD E12 Table 2-2 middle columns "2025 Opening Year with development"

⁶⁶ CD E4 paragraph 2.8.2

not in fact proposed at all. This vagueness becomes a significant concern in relation to the A581/Ulmes Walton Lane junction. The following propositions are put forward, drawn from concessions by the appellant's highways witness:

- a) The A581/Ulmes Walton Lane junction is modelled to be over capacity with the development;
- b) Without mitigation there would be a significant impact;
- c) There is no designed or modelled scheme before the Inquiry;
- d) The appellant's TA scheme is simply illustrative and the intention is that the LHA would provide a mini-roundabout;
- e) But there is no evidence from the LHA about that scheme, no evidence they have used the traffic levels in the TA, and no evidence of design or modelling;
- f) It would not be just a simple re-balancing exercise of the junction; and
- g) The appellant's highways witness accepted that the TA was identifying a problem without providing a solution.

8.21. This is a junction where there would be a significant impact without mitigation on the appellant's own case. It must be mitigated. If it cannot be, then planning permission should be refused. It is that central to the appellant's case. However, at the end of this Inquiry no-one can say how it would be mitigated or produce any evidence to show that it actually could be. The stance of the appellant is "trust the LHA" but there is nothing specific from the LHA other than their non-objection before the Inquiry.

8.22. The scheme has changed from the unmodelled, undeliverable illustrative one in the TA. The best information we have on the new scheme is the vague "it will be a mini-roundabout". Cross-examination of the appellant's highways witness demonstrated how that is not a straightforward solution⁶⁷. This is a busy junction with traffic flows from multiple directions and it is entirely unclear how such a scheme would not just shift the delays and queues to other arms of the junction.

8.23. The SoS needs to have sufficient information to conclude there is a realistic prospect of such mitigation being delivered and that the sum sought via the S106 would be acceptable in planning terms. There is nothing before this Inquiry that allows the SoS to do that, beyond the fact the LHA has not objected. That is an unacceptable approach towards highway safety, an approach that renders the TA deficient, and one that justifies refusal on NPPF paragraph 111 alone.

8.24. Construction traffic is the first of three significant omissions in the appellant's case. This is not a small matter. The appellant's highways witness accepted the following points:

⁶⁷ The appellant's highway witness accepted that a mini-roundabout would delay traffic on the A581 heading west to east (which currently has priority over traffic turning into Ulmes Walton Lane) as it would be necessary to give way to the right on a roundabout.

- a) An unacceptable impact on safety from construction traffic means NPPF paragraph 111 directs the SoS to refuse;
 - b) Neither the TA nor the highways witness' proof or rebuttal properly addressed construction traffic;
 - c) The appellant has not actually quantified it;
 - d) The best information we have on construction traffic levels is that in the peak it exceeds the operational phase in terms of daily trips;
 - e) Both average and peak periods would see a significant increase in HGVs;
 - f) The mitigation has been designed on the basis of operational traffic;
 - g) None of the junction modelling has assessed construction traffic;
 - h) HGVs pose different safety issues from cars; and
 - i) All construction traffic would come along Ulmes Walton Lane and pass through the Moss Lane junction.
- 8.25. The appellant has forecast that, for three years, there would be an average increase of 146 HGVs a day. During a six-week peak period the construction traffic would exceed the operational traffic for both cars and HGVs at 2,022 cars and 102 HGV trips. This information was only to be found in an appendix to the appellant's noise proof. This is an astounding situation, which the appellant does not seem overly concerned about. The appellant has not even fully committed to a condition requiring the off-site road mitigation to be delivered before construction begins.
- 8.26. On the appellant's own evidence and modelling of operational traffic, the unmitigated impact of construction traffic on these roads would cause an unacceptable impact on highway safety. If permission were to be granted, the mitigation should be secured by a pre-construction condition. Even so, that would not solve the concern regarding the higher proportion of HGVs compared to background HGV levels. HGVs cause different safety issues, including slower turning, taking up more junction capacity and a larger degrading impact on carriageways. These safety issues are entirely unaddressed by the appellant because of their failure to consider the impact of construction traffic.
- 8.27. All construction traffic would use the Ulmes Walton/Moss Lane junction with all its inherent safety issues. This point is not properly addressed by the appellant, thereby adding significant uncertainty to the TA which cannot be rectified on the evidence before the Inquiry. This makes the TA even more deficient, prevents the decision-maker from judging whether there would be an unacceptable impact on safety and further enforces why permission should be refused in accordance with NPPF paragraph 111.

Living conditions of occupiers of neighbouring properties

- 8.28. The Inspector will have the evidence of the other parties at this Inquiry, but this main issue no longer forms part of the Council's case.

Character and appearance

- 8.29. The appellant's original assessment was that this proposal would have a short term moderate adverse effect and a long-term minor to moderate adverse effect on the appeal site and its local landscape context⁶⁸. However, that finding was based on the view that the north-east corner of the appeal site (north of HMP Wymott's wall and east of the boiler house) would only be of low susceptibility, being urban edge and dominated by institutional influence. The appellant's landscape witness now accepts that this part of the site actually has a moderate susceptibility due to the fact that it should be considered to be predominantly rural, which increases the adverse effect for this part of the site.
- 8.30. The Council believes this part of the site is one of important areas to focus on. It is the area that is not visually contained to the north, has two public rights of way running through and is predominantly rural. It is where the impact on landscape would be most felt (although the bowling club location comes a close second) and it is where the majority of the development, the prison, would be located. This clear landscape harm should not be watered down simply due to the containment of wider areas of the site such as where the new boiler house would go.
- 8.31. The harm to landscape character is illustrated by the modelled viewpoint 6⁶⁹, which also shows that the appellant cannot justify this scale of development in the open landscape through the use of tree screening. It is an approach directly contrary to the warning given in the Coastal Plain Landscape Character Type⁷⁰. All these points should lift the initial identified moderate adverse landscape effect in the short term to the higher level of significant adverse⁷¹.
- 8.32. Visual effects is the second of the three omissions by the appellant. Whilst it was corrected in the evidence in chief of the appellant's landscape witness, the LVIA missed the fact there are public rights of way running through the site and close to the proposed bowling club location. This is a major omission because, if the impact on those close views⁷² had been assessed, a major adverse effect which could not be mitigated would have been found.
- 8.33. The appellant notes that adverse effects will always be higher closer to the site, but that is not a reason to dismiss them. To do so would artificially lower the visual impact a proposal would have. The appellant's point could carry some weight if a viewpoint was on a private land in the middle of a site, but these are public rights of way often overlooking open countryside which would either be entirely extinguished or diverted to run between a prison wall and trees. It is a major adverse impact which the appellant cannot ignore and yet does not seem to make any difference to the appellant's overall conclusions.

⁶⁸ CD E6 paragraphs 3.47 and 3.48

⁶⁹ CD E6 appendix 2

⁷⁰ See extract in CD A25 paragraph 4.23

⁷¹ CD F1 paragraph 5.79

⁷² Broadly viewpoints 3/4/5 (Pump House Lane) and viewpoint 1 (the east-west footpath north of HMP Wymott) in CD F1

8.34. The appellant has underplayed the visual effects by dismissing the most damaging viewpoints on the public rights of way as they run through the site. This cannot be correct. Instead, the proposal would have a significant visual effect which must be taken into account in the final balancing exercise.

Other considerations and the planning balance

8.35. The all-encompassing test is whether there are very special circumstances as set out in NPPF paragraphs 147 and 148. All the harms and all the benefits need to be weighed into the balance. Once that is done the benefits must clearly outweigh the harms and collectively be said to be very special⁷³. If the benefits do not clearly outweigh the harms, so as to constitute very special circumstances, then it does not matter whether the proposal would otherwise accord with the development plan or NPPF paragraph 11; the proposal should be refused. There is one exception to this. All parties accept that application of NPPF paragraph 111 can lead to immediate refusal on highway safety grounds. An unacceptable impact could not be outweighed by benefits.

8.36. It is important to note the red herring of CLP Policy BNE5. The fact that some of the site is categorised as a previously developed site does not support this proposal nor have any relevance as the exception it enshrines is not met. The proposal is inappropriate development and therefore there is definitional harm to the Green Belt.

8.37. There would be significant harm to Green Belt openness and purposes as well as the automatic definitional harm. In terms of the weight to be given to those harms, the Council's planning witness gives the collective basket of Green Belt harm very substantial weight⁷⁴, while the appellant's planning witness now accepts that each of the three individual Green Belt harms should each carry substantial weight due to the direction of NPPF paragraph 148.

8.38. The weighting process is not quasi mathematical. Three "substantial harms" do not equal one "very substantial harm" and nor is one approach right or wrong. The application of NPPF paragraphs 147 and 148 is a matter of planning judgment, but a very high level of weight should be placed on the harm to Green Belt in line with the Government's intentions.

8.39. There would be highway harm which either solely warrants refusal, if unacceptable, or needs to be taken into account if it falls short of that level. There would be significant adverse landscape and visual effects and the Council gives this significant weight. Despite the appellant's landscape witness increasing her landscape and visual effects, the appellant's planning witness did not alter her assessment of the weight to be attached to these adverse effects, leaving it to the Inspector to consider the veracity of this position.

8.40. The central and predominant benefit relied upon is the need for the prison. The appellant's planning witness accepted that if prison need is not established or if there is an alternative site, then very special circumstances would not be made

⁷³ *R (Chelmsford Borough Council) v The First Secretary of State* [2003] EHC 2978 (Admin) at paragraph 56 (CD K25c)

⁷⁴ CD F1 paragraph 5.83

out. Equally, even if need is proven it would not, by itself, constitute very special circumstances.

- 8.41. There are two sides to the need case, both of which must be established for the appellant to place any weight on it. The first is that there is a regional need which justifies this size of prison. If the prison is oversized, this would reduce the weight to be given to need, as the appellant would have taken up more Green Belt, generated more traffic, and caused more planning harm than is necessary to meet the need.
- 8.42. To save Inquiry time, the Council relies on the submissions of UWAG. At the beginning of the Inquiry, the appellant relied on the projected regional capacity gap by March 2026 of 2,000. By the time the appellant's planning witness gave her evidence, after the appellant's need witness accepted the above figure did not reflect expansion at HMP Hindley (494 cells) and potentially not HMP Liverpool (200 cells), the appellant argued that projections could go up or down and it was a more complex matter of judgment rather than simple reliance on the numbers.
- 8.43. The Council maintains that the placement of the proposed prison at the upper efficiency range (1,715 places across seven houseblocks) was being justified by the capacity gap of 2,000. It is now the case that, on the appellant's own best figures, the gap would be either 1,506 or 1,306 both of which would only justify the lower efficiency range figure (1,468 places across six houseblocks). As accepted by the appellant's need witness, there is no modelled, projected or existing figure which justifies this size of prison. On that basis, the appellant falls at the first need hurdle.
- 8.44. The second side to the need case is whether there are reasonable alternative sites. This is where we encounter the appellant's third omission. Again, this is matter dealt with by UWAG in closing, but it is remarkable that the appellant missed in their original site search Land south of Stakehill Industrial Estate, a site which the Council submits is the reasonable alternative site which the appellant claimed did not exist. The fact that Stakehill would now come up against prematurity arguments is not a sufficient justification for the appellant being let off the hook for missing it the first time, especially given the intention for it to be released from the Green Belt.
- 8.45. The dismissal of Land at HMP Kirkham as a further alternative was down to a pre-application response which was not as damning as first suggested. It seems now that one of the main reasons relied upon for its exclusion would have been the effect such a proposal would have on tourism.
- 8.46. The scrutiny that has been able to be applied to this process during the Inquiry (limited as it was by the lack of any scoring and weighting process of sites against the mandatory, secondary and tertiary considerations) has revealed that the SoS cannot have faith that there are no reasonable alternative sites. Indeed, all the evidence points to the fact there are at least two such sites. If the SoS were to find that there was a reasonable alternative site, which the appellant could or should have identified, then very special circumstances could not be made out. The Council submits that reasonable alternative sites have been identified.

- 8.47. Finishing with other benefits, the economic benefits are generic and ones which arise with large development of this kind. While this does not mean they should carry no weight it does minimise their weight given the danger, especially with development in the Green Belt, of larger developments justifying themselves through the ever-increasing scale of economic benefits. As set out by the Council's planning witness⁷⁵, they should be given limited weight.
- 8.48. The social benefits should be treated with caution due to the overlap with the broader weight given to the delivery of a prison. The purported upgrading of Pump House Lane, which would run between a prison wall and screening trees, should carry no weight at all. As set out by the Council's planning witness, the social benefits should be given moderate weight.
- 8.49. Absence of environmental harm, such as the site not being at flood risk or there being no sensitive ecological designations, does not amount to a benefit. The projected 20% biodiversity net gains should only carry moderate weight, given the incoming national requirement to deliver 10%.

Conclusion

- 8.50. Overall, there are numerous routes which lead to this proposal being refused permission and the appeal dismissed, namely the unacceptable impact on highway safety, the lack of evidenced highway mitigation, the omission of construction traffic, the lack of justification for this size of prison, and the existence of alternative sites. The point can be put in a fairly simple way. This is a proposal which would cause significant harm to the Green Belt, and to landscape character, and would have an unacceptable impact on highway safety all in return for a unevidenced justification for a prison of this size in this location. It falls far short of very special circumstances and on that basis the Inspector and the SoS are requested to refuse planning permission and dismiss the appeal.

9. The Case for Ulnes Walton Action Group (UWAG)⁷⁶

Issues for the Inquiry

- 9.1. The appellant needs to show that the benefits and other factors in favour of development, including need, are such that they can properly be described as 'very special' and that they 'clearly outweigh' the harms identified (NPPF paragraph 148). The appellant must meet this policy test before planning permission for inappropriate development of a Green Belt site can be granted (NPPF paragraph 147). The requirement for something 'very special' is deliberately framed in national policy. It is the cornerstone of the approach to protecting Green Belts. It requires more than 'exceptional circumstances'⁷⁷ which is already a stringent test. The words 'very special' must be given their ordinary and natural meaning⁷⁸ as agreed by the appellant's planning witness.

⁷⁵ CD F1 paragraph 5.116

⁷⁶ Largely taken from UWAG's closing submissions (CD K24)

⁷⁷ See *R (Luton BC) v Central Beds DC and Ors* [2015] EWCA Civ 537 at paragraph 54

⁷⁸ See *R (Chelmsford BC) v First Secretary of State* [2003] EWHC 2978 (Admin) at paragraphs 54-56 and 71 (CD K25c)

- 9.2. The proposal would lead to a significant area of Green Belt land being lost permanently to substantial built development. That sets it aside from ordinary (non-Green Belt) proposals. NPPF paragraph 137 states that the Government attaches great importance to Green Belts and notes the key characteristics of Green Belt land are its openness and permanence. The proposal would amount to a direct conflict with that fundamental aim, which is at the top of the hierarchy of priorities in the NPPF:
- a) Any harm to the Green Belt is to be afforded substantial weight. Unusually, the question of weight is not left to planning judgment.
 - b) In the prisons context, there is no 'tilted balance' policy mechanism unlike for significantly boosting the supply of housing. In any event, Green Belt protection trumps that balance and it is clear that the preservation of permanent open Green Belts is a key strategic priority.
 - c) There is no mechanism in national policy to address a shortfall in prison complexes and no suggestion that the shortage should lessen the importance of protecting Green Belt land (still less that the shortage should be met on Green Belt sites). Although national criminal justice policy might aim to ensure that those in Category C resettlement prisons serve out the final months of their sentence closer to their home address, there is no related policy intervention which indicates the importance of this factor in associated planning decisions. The only sensible conclusion is that Green Belt policy is untrammelled by such aspirations.
- 9.3. Green Belt protection is a political choice but it has been made and reflected in national planning policy. That this proposal is in fundamental conflict with that aim is its defining feature. Ordinarily it should be refused and it is only genuinely where what can be described as very special circumstances arise that there can be any question of permission being granted.
- 9.4. For a large-scale and high-profile appeal, the appellant's case has at times appeared surprisingly cavalier. The TA has left out the impacts of construction traffic and the many ancillary vehicular journeys to and from the prison that already occur with the existing prisons. The assessment of need that is said to lie behind the critical gap between the supply of places and the future prison population appears to have been calculated without any (or any transparent) assessment of future supply of new prison places. The alternative sites assessments appears to have paid no regard to the criteria that were said to be the framework for that exercise, whilst leaving uncorrected until the last days of evidence a wholly misleading section of the Planning Statement dealing with the approach undertaken.
- 9.5. This has made it unnecessarily difficult for a Rule 6 party to engage in the proper scrutiny of the proposal at appeal. UWAG has asked for clarification and been met with dismissive replies⁷⁹. At times it appeared as if the appellant's team had not read their carefully prepared evidence. When the approach was scrutinised in cross-examination it turned out to be based in large part on 'judgment calls' which are impossible to scrutinise rigorously. Rule 6 parties

⁷⁹ See for example the exchange at CD K9, K10 and G4b

generally can add significant value to an inquiry, but UWAG's ability to make a significant contribution here has been in spite of, rather than properly facilitated by, the appellant, which is all the more regrettable given that the appellant is part of central Government.

- 9.6. In many key areas, the appellant's position does not stand up to rigorous scrutiny which is what the inquiry process is for. The evidence about need is essentially incomplete; there is no assessment at all of the future capacity regionally or nationally against which to assess the projection of future population. Without that, talk of a capacity gap is no more than rhetoric and ought not to be sufficient. Similarly, the claimed absence of any reasonable alternative appeared to be based on little more than a negative pre-application advice letter from Fylde Council. That may have been disappointing to receive, but it did not, and does not, make the Kirkham site a non-runner as a reasonable alternative.
- 9.7. These points are developed in more detail below, but our conclusions in very broad terms are:
- a) The proposal amounts to a substantial loss of open Green Belt land, in direct contravention of the national policy imperative to keep such land free from inappropriate development;
 - b) In addition, it would cause a range of other harms;
 - c) That 'basket' of harms amounts to a very substantial accumulation of harm, and clearly outweighing it would take something very special indeed;
 - d) While the socio-economic benefits of the proposal are significant, it is the twin propositions that there is an urgent need for these places and nowhere else they could reasonably go that elevates the case from the ordinary to the potentially very special;
 - e) Any rigorous analysis of the appellant's evidence on future need for these places could only conclude that it was hopelessly uncertain: the projections of need themselves appear to be way too high, and the absence of even the most rudimentary assessment of future supply makes the assessment essentially meaningless; and
 - f) Lastly, it is now obvious that the land next to HMP Kirkham is at least a reasonable alternative; and has obvious potential to be a much better site for this prison than the appeal site. That alone is sufficient to warrant dismissing the appeal, on the appellant's own case⁸⁰.

Definitional harm

- 9.8. This would be a major development including seven blocks up to four storeys in height, large enough to accommodate 245 prisoners each, with significant ancillary development. The replacement boiler house would lead to further visual impact from two 5.2m high silos and a flue extending up to 22m. The

⁸⁰ The appellant's planning witness conceded that without the 'no alternative site' component of the case, very special circumstances do not exist, with the obvious consequences that follow

relocated bowling green would lead to new built forms in previously undeveloped countryside.

- 9.9. Although redevelopment of previously developed sites in the Green Belt can be considered appropriate, this is only where doing so would have no greater impact on openness (NPPF paragraph 149(g)). It is agreed that this case does not meet that requirement, not least because only part of the proposed site is previously developed, and a significant part of the site is undeveloped. That which is previously developed will be replaced with something of a significantly greater impact on openness. It is thus common ground that the proposal comprises inappropriate development. Inappropriate development is harmful to the Green Belt and NPPF paragraph 148 requires that substantial weight should be given to any Green Belt harm.

Visual and spatial loss of openness

- 9.10. The extent to which the loss of openness would be perceptible and appreciable is a matter of planning judgment. The officer's report⁸¹ concludes that the proposal would have a greater impact on Green Belt openness both visually and spatially given the extent of open land across the site and the scale of development proposed. UWAG's planning witness endorsed that view⁸². The appellant does not seriously contest that proposition, which is also made by the Council's planning witness.
- 9.11. The appellant's attempt to downplay the harm to openness by referring to similar built development in the vicinity misses the point. It may be relevant in questions of landscape character and visual impact, but Green Belts exist to prevent urban sprawl and by definition they will be found adjacent to built development. The fact that the reduction in openness occurs adjacent to built form cannot reduce the harm thereby caused. Such an approach would drive a coach and horses through Green Belt policy.
- 9.12. Substantial weight is required to be given to any Green Belt harm as a minimum, including proposals which reduce openness regardless of the extent of reduction, the visibility/perceptibility of the development and so on. There are significant factors which elevate the Green Belt harm above the minimum. The establishment of an industrial-scale prison complex and ancillary development must be appropriately acknowledged with a loss of 8.4ha of open land. This is a significant reduction and very substantial weight must be afforded to that loss.
- 9.13. Contrary to the appellant's position⁸³, the fact that only one of 5 purposes stated in NPPF paragraph 138 is engaged does not mitigate the fact that all parties agree the proposal would conflict with the purpose of safeguarding the countryside from encroachment. That it happens not to conflict with the others is not a factor in its favour. The proposal would involve substantial built development of an urban nature within a currently open, broadly rural area of land. There are significant areas of the site that are presently undeveloped, including grassland, especially in the north-eastern and southern parts of the

⁸¹ CD A97 paragraph 89

⁸² CD G1 section 6

⁸³ CD E2 paragraph 7.22

site. These areas would be encroached upon leading to a significant degree of conflict with this purpose and resulting in a high level of harm.

- 9.14. The proposal would be much taller than anything else on site and significant in scale compared to what is already there. It would be highly visible from some locations including the public rights of way and prescriptive footpaths. There are no significant long-range views of the site, and if this is what the appellant means about the site being 'contained' then so be it. What is clear is that to the north and east of the site there are presently open views across a pleasingly rural landscape, dotted with remnants of the former munitions depot which do nothing to detract from that rural character. Travelling down Pump House Lane from the north would permit extensive views of the new built form.
- 9.15. UWAG endorses in general terms the evidence given by the Council's planning witness about the visibility of the reduction in openness. In addition to the significant loss of openness in spatial terms, that loss would be highly perceptible from the public realm, albeit not from long-distance views. Overall, very substantial weight should be attached to the Green Belt harm, recognising that the proposals do substantially more than the minimum harm.

Landscape character and appearance and visual impact issues

- 9.16. Despite the site not being a valued landscape or subject to any specific landscape designations, there remains value in its local landscape contribution. Harm to its intrinsic character and beauty is harm to be weighed against the grant of planning permission. Unlike a non-Green Belt case, there is no need to weigh up whether this aspect would be unacceptable or a reason for refusal in its own right. All that is needed is to assess the level of harm caused and add it to the basket of harm arising.
- 9.17. The LVIA acknowledges residual effects on local landscape character and the wider landscape character area in the long-term. It finds the effect upon the landscape character area at completion could be 'moderate adverse' reducing to 'minor adverse' at Year 15. In respect of the local landscape character, the effect would be 'moderate adverse' at completion reducing to 'minor-moderate' adverse at Year 15. This harm is very much relevant in the planning balance. It amounts to harm lasting a generation and should be afforded appropriate weight in the balance.
- 9.18. The proposal includes the significant extension of built form into open countryside, with the proposed landscaping significantly changing the current open agricultural character of the existing site. The proposal not only includes the removal of open fields and hedgerows, but also includes the removal of over 21,000sqm of existing mature tree planting, albeit to be 'replaced' elsewhere. The site's character cannot be sensibly described as 'urban fringe' and one only needs to walk the site and its surroundings to see how inappropriate that is.
- 9.19. UWAG endorses the Council's conclusion that the appellant has underplayed the localised effect of the proposal on landscape character and overstated the efficacy of the proposed landscaping mitigation. The proposal would have a notable adverse effect on landscape character and appearance.

- 9.20. The new development would be visible from a range of viewpoints. From a number, the impact would be, on the appellant's own evidence, at least moderate adverse and some would be major adverse. No such impacts arise from long-range views but that is hardly a factor in the proposal's favour. What is required is an assessment of the impact on views, and here a number are significantly affected, including from public rights of way.
- 9.21. In addition, UWAG is particularly concerned about light pollution. The new development would not be without light spill and glow in dark hours, amounting to moderate harm in the planning balance. The appellant's visualisations did little to reassure in this regard. UWAG concludes, in line with the Council, that the harm arising from the landscape and visual impacts are greater than the LVIA suggests and, taken together, merit significant weight.

Traffic, noise and disturbance

- 9.22. Whilst UWAG has not taken an active part in the technical debate over highway safety, if the SoS accepts the Council's evidence that the appellant has failed to provide satisfactory evidence that no highway safety issues will arise, that is likely to be fatal to the appeal. UWAG is particularly concerned that the junction between Ulnes Walton Lane and Moss Lane, which local residents must cross to use the post box and catch the bus, is expected to take a vast number of additional vehicles, including 146 HGV movements a day for three years, without any meaningful upgrade to its safety features.
- 9.23. Ulnes Walton Lane is just 5.2m wide at its narrowest point, which is at the bus stop just south of the junction with Moss Lane (UWAG's measurements were not contested or challenged by the appellant). The prospect of two HGVs attempting to pass one another at this point, not unlikely given forecast volumes in the average construction month, is worrying.
- 9.24. Further, the junction from Ulnes Walton Lane to the A581 is modelled by the appellant to be over-capacity when the traffic generated from the proposal hits the network, causing long delays. The only answer seems to be a vague suggestion of a new mini-roundabout with, as accepted by the appellant's planning witness under cross examination, no technical work at all to show how (or if) that would ease things.
- 9.25. The impact of noise and disturbance from traffic generated by the proposal is another aspect of the case UWAG has sought to have taken seriously, with the focus on Windy Harbour. The noise modelling by the appellant is based on the traffic generation data produced by the TA. That excludes all ancillary trips (deliveries, ambulances, contractors and so on), and for construction traffic relies on a CTMP from another prison which the appellant points out is only in draft, is work in progress, contains too many uncertainties, and contains data which might be different for this prison.
- 9.26. The noise modelling also uses the modal split from the TA which is unrealistic. In reality there would be fewer people using the bus, train, bicycle or car sharing than predicted and more coming in their own car. The TA also proceeds on the basis that traffic would travel at the speed limit⁸⁴, when the

⁸⁴ CD E5 paragraph 6.2.1

TA itself shows that traffic does not presently do that along Moss Lane⁸⁵. It is thus plainly not describing a worst case scenario.

9.27. The appellant uses the approach set out in the DMRB⁸⁶ for its noise assessment, noting that it provides a good framework for this kind of assessment⁸⁷. It is directed specifically at the noise implications of road traffic. That framework suggests the following:

- a) In the **operational phase** of the proposal, there would be an increase of 3.6dB at Windy Harbour (known as ESR3 in the noise assessment) in the daytime, which is described as moderate by the DMRB and thus a significant increase in the noise environment in the short-term;
- b) However, that increase does not push the noise environment above the LOAEL set out in the DMRB (55dB). The noise level would remain below that level;
- c) At night, the increase would be similar (3dB increase at ground floor and 4dB increase at first floor) which would mean that LOAEL would be exceeded;
- d) The effect of exceeding LOAEL is clear from the PPG table⁸⁸;
- e) The appellant suggests that this LOAEL exceedance is not a concern because the noise environment already exceeds that LOAEL. That is strictly true of the first floor but not the ground floor and the current noise environment at first floor level is only above LOAEL by 1dB, which is not perceptible to the human ear⁸⁹;
- f) For this reason, the appellant then abandons the DMRB approach and considers the change in noise environment against the WHO guidelines for community noise, which suggests a higher LOAEL at night-time which would not be exceeded. The reasons for this shift were not easy to understand; the WHO guidelines address all forms of community noise whereas the DMRB is specific to road traffic noise, and if the WHO approach is to be preferred on some objective basis, it is hard to see why DMRB was used at all;
- g) Lastly, while it is true that Windy Harbour does not have a window at first floor directly facing Moss Lane, it has French doors at ground floor level, and even on the revised analysis of the noise environment at first floor level to take account of the fenestration, the resultant noise environment would still be above the LOAEL set out in DMRB at 42dB⁹⁰;
- h) In the **construction phase** of the proposal, for the three-year construction period the average effect (scenario 4 in CD E5) would be a

⁸⁵ CD A35 paragraph 3.3.1

⁸⁶ CD H4

⁸⁷ CD E5 section 4.3

⁸⁸ See extract in CD E5 paragraph 3.4.2

⁸⁹ CD E5 paragraphs 7.2.4 and 7.2.9 (Table 8 shows the predicted figures)

⁹⁰ CD E5 Table 9

4dB increase at Windy Harbour in the daytime, again described by the DMRB as moderate and thus significant;

- i) In the peak construction period (scenario 5 in CD E5), estimated to be six weeks long, there would be a 5dB increase at Windy Harbour, described by the DMRB as a major impact;
 - j) In both scenarios, the duration of that effect would exceed the limit set out at DMRB paragraph 3.19⁹¹;
 - k) Both effects would mean the noise environment at Windy Harbour would be above the LOAEL; and
 - l) The answer offered by the appellant's noise witness to this major impact is to suggest a 20mph temporary speed limit for the peak construction period, which would not assist with the average construction period which is to last three years.
- 9.28. Because the approach is plainly not a worst case, there must be a real risk that these effects will be worse and/or more widespread. This is a further harm to be weighed in the balance.

Parking

- 9.29. The proposed 525 spaces would only be sufficient if the appellant is correct that some 17% of staff would access their workplace by means other than driving their car. Table 3-9 of the TA suggests that (once walking has been removed and redistributed across the other modes) some 4.5% of staff would come by bus, 1.3% by train, and 1.9% by bike (each mode being more than the percentage of Chorley residents using that mode to access their workplace).
- 9.30. That is self-evidently wrong. The vast majority would come by car. This is a workplace with shift patterns, with no usable railway station nearby, with a barely-used bus service that has been upgraded in the past and that upgrade abandoned for lack of use and which is accessed by a narrow lane unsuitable for all but recreational daytime cycling. UWAG suggests that 90% of staff would come by car. If that is right, and it seems eminently likely, then the proposed car park would be too full during the day⁹². The outcome would be staff parking on surrounding roads like Moss Lane and Willow Road, with the resultant noise and disturbance to those that live there.
- 9.31. The appellant's point about estimated visitor numbers being likely to be an over-estimate does not answer the point. Even if you cut visitor numbers by half to account for this, the car park would still be over-capacity for much of each day. Nor does the suggestion that over-providing car parking space disincentivises people to use non-car modes of travel. Often, it does, but not here. Being unable to find a car parking space would not inconvenience people who wish to drive, because they would simply park on the surrounding roads, which is free, and no less convenient. Staff from the two existing prisons do so already.

⁹¹ CD E5 paragraph 7.3.9 and answers in cross-examination

⁹² CD G2k and G2l

9.32. The appellant's noise witness accepted that if the TA underestimates the level of car use in accessing the new prison and that leads to additional parking on the surrounding roads, that would be likely to lead to a worst noise effect. If UWAG's analysis of the likely parking implications and the likely effect in terms of increased on-street parking is accepted, that is a further harm to be added to the basket.

Other identifiable harms

9.33. It is common ground⁹³ that the following matters also constitute harms to be added to that basket:

- a) The loss of a limited amount of high-grade farmland constitutes a negative impact that would not be overcome in the future. UWAG points out that in an era of uncertain food security, that is not to be lightly dismissed;
- b) There would be a loss of land safeguarded for mineral extraction;
- c) There would be a loss of a substantial quantity of mature woodland. It is proposed to be replaced elsewhere but the replacement to the present level of maturity would take many years;
- d) It is agreed that there would be harm to ecology in the short to medium term;
- e) There would be an uncompensated loss of a playing field, albeit one not available for general public use, as identified in the objection from Sport England. It is used by inmates and staff of the existing prisons; and
- f) There would be harm to the significance of a non-designated heritage asset in terms of the former Ministry of Supply Depot.

9.34. In addition, UWAG has expressed concerns about the accessibility of the site, none of which has been seriously challenged by the appellant. This is not a sustainably located site. The vast majority of journeys would be made by car, with very few indeed likely to be made by sustainable modes of transport. One can appreciate the convenience of locating new prisons adjacent to existing ones but that does not make the location sustainable from an accessibility point of view.

Conclusion on harm

9.35. This is not one of those cases where the harm to be assessed is limited to the 'definitional harm' comprised in a reduction in openness. That exists here, in that there would be a significant reduction in openness, comprised in more than 8ha of 'net' new built form where presently there is none, but there is also a very real range of other harms that would be caused by the proposal.

9.36. The permanent and irreversible loss of Green Belt land, which would not be fully mitigated through landscape, siting and design, would also be visible and perceptible. The proposal represents a noticeable encroachment of urban development into the open countryside. The totality of Green Belt harm would

⁹³ CD C8

be significant. The definitional harm alone must attract at least substantial weight as a matter of national policy, but over and above that are a series of other harms, adding considerable additional weight against a grant of permission. In totality, such harm should attract very substantial weight here.

Benefits

- 9.37. It is agreed that there are a range of social, economic and environmental benefits to the proposal. It is clear that on their own, even taking the appellant's assessment of the weight to be attached to them, they cannot amount to very special circumstances. They are respectable, significant benefits of a new prison, but on their own they are in no sense 'special'. It remains the case that those benefits appear to have been calculated by reference to a 2013 report by Peter Brett Associates⁹⁴ which uses data from three non-rural prisons, excluding the fourth prison data source on the basis that it was, like this proposal, in a rural area. That must undermine the reliability of that study as a basis for assessing the likely benefits here.
- 9.38. Some of the benefits relied on by the appellant, particularly under the heading 'environmental benefits', are self-evidently nothing of the sort. The prime example is the suggestion that the proposals would not lead to flooding here or elsewhere: that is a relief, but it is not a benefit of the proposal in any meaningful sense. The same analysis applies to the (claimed) minimisation of landscape and visual impact, and the mitigation of overall effect on species. That the appellant proposes to use modern and efficient building methods is laudable but not a planning benefit either. These should be set to one side.
- 9.39. What really matters in this regard is the proposition that there is an urgent, pressing need for prison spaces of this kind, and nowhere other than this site on which to provide them. Without them, this case has nothing special about it whatsoever. Indeed, the professional view of the appellant's planning witness is that without just the latter, the absence of a reasonable alternative site on which this need could be met, the case for 'very special circumstances' falls away. UWAG agrees.

The need for the facility

- 9.40. There is no dispute that there is a need for more prison places, or that there is a need for a new Category C prison in the North-West. Without more, the existence of a need for a new Category C prison in the North-West cannot constitute the very special circumstances required to clearly outweigh the totality of Green Belt harm. With a growing population, and a governmental determination to catch more criminals and send more of them to prison, there will always be a need for more prison spaces.
- 9.41. In this appeal, though, the question is whether this particular proposed prison, on the proposed scale, must be built at this exact Green Belt site, in order to meet the need that the appellant claims is likely to arise in the next five years. The appellant's case is that it is of 'critical importance'⁹⁵ that this prison is delivered here in order to ease (or help to ease, which seems the maximum

⁹⁴ CD J1

⁹⁵ CD K1

that can be hoped for, given that this proposal offers to deliver 1,715 places) what is said to be a 'capacity gap' in March 2026.

- 9.42. The first observation is that this prison will not deliver any places until Q3 of 2027⁹⁶ and so cannot assist with any capacity gap arising in March 2026. The second is that in order to assess the robustness of the claim that a 'capacity gap' will arise, one needs as a minimum some robust evidence about future need, and robust estimates of future supply. A 'gap' can only be the relationship of one of those data to the other. The third observation is that the 'gap' is said to be a regional one, arising here in the North-West. It follows that the evidence of need and capacity to support it must equally be at a regional level. The Inquiry has none of the necessary evidence.
- 9.43. The first aspect of need relates to the national picture. It is common ground that there is a national need for new prison spaces, and that the prison population is likely to grow into the future. UWAG's case is that the appellant overstates the urgency and extent of national need. As UWAG's evidence has shown, the appellant's case is premised on forecasted demand for numbers. Those projections have been revised down once already since 2020, and the evidence is clear that the actual growth in prison population at the national level is tracking well below that projected in 2021:
- a) The population as of 10 June 2022 was 80,115 prisoners⁹⁷;
 - b) At the same date, the operational capacity was 82,676 places⁹⁸;
 - c) The increase in population in the 7 months since the projections were published (i.e., 19 November 2021) is just 535, while the operational capacity has grown by 1,772 places⁹⁹;
 - d) The rate at which the population has grown since November 2021 is an average of c.100 per month (to May 2022, to permit comparison with the projections), while the 'central projection' suggests growth in that same period at a rate of c.650 per month, six times the rate¹⁰⁰;
 - e) The result is that the present population (as of May 2022) was some 6,000 prisoners lower than projected by the 2020-based projections¹⁰¹, and some 3,000 prisoners lower than projected by the 2021-based projections¹⁰²; and
 - f) The 2021 projections suggested that the population was expected to "rise to pre-COVID levels in July 2022". The pre-COVID level was 83,654 prisoners (February 2020)¹⁰³, but the actual prison population in June 2022 was 80,115 (and will not reach pre-COVID levels by July 2022), being some 3,500 prisoners short.

⁹⁶ CD E10 paragraph 11

¹⁰⁰ Agreed with the appellant's need witness in cross-examination

¹⁰¹ CD G2a

¹⁰² CD G2b

¹⁰³ CD G2e

- 9.44. This is consistent with the appellant's evidence that the projections are necessarily uncertain and rely on specific factors affecting projected demand. That is understandable. Forecasting is an inexact science and highly sensitive to uncertainties. That is why forecasters often use 'sensitivity testing', to explore the possibility that their assumptions turn out not to be reliable, but that does not appear in this case.
- 9.45. The factors identified as being crucial uncertainties in this forecast have turned out not to be robust, to the extent that it is no surprise at all that we are so far short of the projected population at this stage:
- a) The recruitment of police officers may well result in more crimes being detected, and possibly more people ultimately ending up in prison, but it may also have a deterrent effect on crime, or some types of crime. We have no sense of the regional breakdown either as to the number of officers recruited or the likely regional effect. It seems a stretch to base projected increases in prison population on this factor, which must at best be highly uncertain as to its effect on prisoner numbers (particularly on a regional basis);
 - b) The overall aim of Government policy must be to reduce crime, rather than just increase the rate of detection; the trend towards longer sentences must be intended (at least) to have some deterrent effect;
 - c) The effect of the backlog in the Crown Court is not to be underestimated. The Government's aspiration to reduce it (with the effect of increasing the prison population) was considered forensically by the Public Accounts Committee (PAC) of the House of Commons very recently. The report¹⁰⁴ is not happy reading;
 - d) The backlog was 61,000 in June 2021, up from 41,045 in March 2020 when the pandemic hit, and from 33,290 a year prior to that;
 - e) The aspiration is to reduce the current backlog to 53,000 by March 2025, described as a 'meagre' ambition by the PAC¹⁰⁵. If that is achieved, the backlog by that time will be some 30% higher¹⁰⁶ than it was even before the pandemic hit;
 - f) The PAC consider even that 'meagre' ambition to be unlikely. Recruitment of new judges has not been going well and the plan to achieve the reduction was 'not credible'¹⁰⁷;
 - g) All of this pre-dates the ongoing industrial action by the Criminal Bar, which must be having a further negative effect on the backlog.
- 9.46. All of the above both explains why actual data is lagging so far behind the projections but also strongly suggests that the projection is itself over-heated. The appellant's need witness says that this is just a nine month delay in the

¹⁰⁴ CD G2d

¹⁰⁵ *Ibid.* page 5

¹⁰⁶ 53,000 compared to the March 2020 figure of 41,045

¹⁰⁷ *Ibid.* page 5

projections¹⁰⁸, which given the commensurate (almost, it is actually at least 15 months) delay in delivering this proposal is immaterial. This does not bear scrutiny either. The 2021 projection suggested a return to pre-COVID levels of prison population by July 2022. That has not happened but pushing that prediction back 9 months takes us to April 2023.

- 9.47. If there really is a nine month delay, we can expect pre-COVID levels by that date (i.e., around 83,654). If that is so, then that would be some 4,600 short of what the projection suggests would be the population at that time (i.e., 88,300 at least for March 2023). The gap between the actual and projected population would have grown. It is presently around 3,500 as set out above. All of this suggests strongly that the projected national need into the future is a significant overestimate.

Regional need

- 9.48. The second aspect of need is the regional picture. There are no projections of this need and the national projection has not been broken down to a regional or any other level. There is, in any event, some disagreement about the implications the claimed regional need has for the exact proposal presented in this proposal:
- a) The appellant's need witness identified that, as of May 2022, around 1,350 male Category C prisoners with less than 24 months sentence remaining and who had a home address in the North-West were being held in prisons outside the region. He confirmed that this cohort would be held in the new prison. This cannot be correct given that the development, if allowed, would likely take longer than 24 months to build;
 - b) The proposal is for a 1,715 inmate prison on a Green Belt site. The sole reason for the proposed number of inmates is set out clearly in the appellant's evidence in that the figure equates to the maximum efficiency for construction costs and operations;
 - c) However, that efficiency should not be conflated with need, especially where each additional brick, slab or cell increases the level of harm to the Green Belt in respect of encroachment and impact on openness. The Council is surely correct to say that only limited weight could be afforded to any plan, such as the proposal, which extends beyond the current level of identified need;
 - d) In short, there is no evidence whatsoever (short of the appellant's assertions) to support the claimed regional level of need and no analysis whatsoever of the likely future capacity, whether in the North-West or at all.
- 9.49. That absence of any evidence at all about future capacity is extraordinary. All we know is that the operational capacity of the national prison estate was 82,676 as at June 2022 and that new places will be added to the estate at various points in the future, including:

¹⁰⁸ CD E10 paragraph 10

- 500 places when the 'operational headroom' (to provide flexibility and safety in terms of the use of prison accommodation)¹⁰⁹ of 2,500 is reduced to 2,000, perhaps in the autumn;
- 1,715 places in the Midlands when HMP Fosse Way opens, perhaps in 2023;
- 1,440 places in Yorkshire when HMP Full Sutton opens, perhaps in 2025;
- 494 places in the North-West when the expansion of HMP Hindley opens, at some point; and
- Around 200 new (refurbished) cells at HMP Liverpool, perhaps in 2026.

9.50. That is encouraging, but the exercise here is to scrutinise the central component of the case for very special circumstances, a so-called 'capacity gap' in the North-West in March 2026. That is, literally, impossible. There is no data. We know nothing of when the above places will become available, or when (or whether) other places will be expected to come forward. We do not know whether (or when) prison cells space will be lost. There is not even a 'back-of-an-envelope' estimate, year on year, whether nationally or, crucially, regionally. We are simply asked to take the appellant's word for it. That is not how this process works. The only conclusion is that the appellant's case on need is not robust and, for the Inquiry's purposes, not made out.

Lack of alternative location

- 9.51. The lack of a suitable alternative location is at the heart of the case for very special circumstances here. If (as UWAG consider) there are a number of potential locations for this development (even if the urgent need for them is made out), then the case changes materially. The appellant's planning witness was right to accept that this was an essential element of her case, without which it would fail.
- 9.52. There is no national or development plan policy on how possible sites for new prisons should be chosen or taken forward. However, this lacuna does not afford the appellant carte blanche to assert that only this site can feasibly accommodate the required new prison. To make out this aspect of its 'very special circumstances' case, the appellant must evidence that there are no other alternative sites reasonably capable of supporting the proposed development. The appellant's planning witness agreed that the question is whether there is a site which is either as good or better than the appeal site. 'As good' is sufficient to defeat the appellant's case. UWAG's case is that the appellant has failed to discharge that burden.
- 9.53. The appellant's case on alternative sites is at best opaque and at worst flawed. Despite multiple requests (and recourse to the Information Rights Tribunal) the appellant has never disclosed its approach to 'scoring' the candidate sites. In cross-examination of the appellant's planning witness, it was clear that it did not even embark on that process for at least some of the candidate sites (and in particular sites at Stakehill and Kirkham), or for the appeal site for comparative purposes.

¹⁰⁹ CD G2f

- 9.54. Without that information, it is impossible to critically assess the process. How are the secondary criteria weighted one against the other? How are they weighted against the tertiary criteria? How are the tertiary criteria weighted one against the other? How is an overall 'rating' or score reached to permit comparison between sites? We have no idea and consequently no idea how the appeal site compares to either the Kirkham or Stakehill sites on the appellant's own identified criteria.
- 9.55. Remarkably, that is precisely the criticism the appellant advances on UWAG's evidence¹¹⁰, where they say the use of a red/amber/green rating system does not allow for weighting of criteria which may be more significant than others and does not allow for the different scores to be afforded different weight in an overall assessment, with no detail provided on how the appeal site is less preferable than others through an overall scoring.
- 9.56. The one thing we do know is that the appellant considers the appeal site to satisfy 'many of' the identified criteria¹¹¹. It follows that it is not considered to meet them all. But which ones it does not meet, and the way in which that affects any kind of overall score, or the comparison, is entirely obscure.
- 9.57. Even on the evidence we do have, it is obvious that there is at least one, and probably two, sites that are reasonable alternatives to the appeal site for meeting the claimed need. The approach is, by definition, a high-level assessment. The level of detail one might reach in a planning appeal is not possible for the candidate sites. Are there constraints that rule out Stakehill or Kirkham as reasonable alternatives, in this context? We say patently not. Both are in the North-West and well above the requisite size. Both are in the Green Belt, just like the appeal site. Aside from UWAG's work, there is no assessment of either site against the identified criteria, or against the appeal site in that context:
- a) For **Stakehill (Oldham)**, the key issue appears to be its draft allocation in the emerging plan for Greater Manchester ('Places for Everyone'). It is part of a much larger draft allocation for a mix of housing, employment land and associated infrastructure, as Green Belt release. That can only be in its favour as an alternative to the appeal site, which is not proposed to be removed from the Green Belt by any plan. The harm entailed in delivering a prison at Stakehill must be much-reduced in that context;
 - b) The appellant's pessimism about timescales was not persuasive. There is no requirement to wait until a plan is adopted before making a planning application. This appeal is made following an application for a site which is not allocated in any plan, and there is nothing unusual about a pre-emptive application relying on a draft allocation (especially where the plan is at a reasonably advanced stage). This application was determined some 4 months after it was made; the delay to this point is largely down to the appellant delaying its appeal until April 2022;

¹¹⁰ CD G4c

¹¹¹ CD A3 paragraph 7.36

- c) This might all be more persuasive if any attempt to engage with the local planning authority for Stakehill had been made, whether as to its compatibility with the draft allocation, likely officer support, or timescales. There has been none, despite the local planning authority drawing the site to the appellant's attention as part of the call for sites here;
- d) There is no ecology, or heritage constraint that compares unfavourably with the appeal site;
- e) In terms of access, the suggestion is that bus route 17, which offers a frequent and short trip to and from the centre of Manchester, could not be used because there is presently no permeability between the industrial estate to the north (where it stops) and the site. The appellant's planning witness accepted that this was not likely to be insurmountable, especially given the budget apparently available here for enhancing the bus service;
- f) The access by rail is a significant improvement over the appeal site, allowing a short trip from Manchester city centre to the appeal site via a short walk from Mills Hill station;
- g) Unemployment in Oldham is much higher than in Chorley (or South Ribble), meaning the contribution of new jobs would be more valuable there than here;
- h) While a small point, the site does not boast a sports field and so no equivalent loss of one would be suffered;
- i) Overall, Stakehill is just as good as the appeal site, offering some distinct advantages;
- j) For **Kirkham**, the extraordinary position seems to be that this site was dismissed from consideration upon receipt of an unfavourable pre-application response from Fylde Council¹¹². That is, on its own terms, obviously insufficient. Pre-application advice is non-binding, and the letter raises no specific insurmountable constraint. It doubts that the 'very special circumstances' case advanced here, and opposed by Chorley Borough Council here, would be sufficient;
- k) Turning to the detail, the suggestion that it would prejudice the Green Belt 'purposes' relating to the setting of historic towns, and the unrestricted sprawl of large built-up areas, is not developed at all in the letter and seems objectively unsound;
- l) The letter does not suggest any unacceptable (or insurmountable) constraint relating to landscape or visual impact;
- m) It makes literally no reference at all to Ribby Hall¹¹³, a listed building. That part of the case seems to have been misunderstood entirely by the

¹¹² CD J2

¹¹³ The reference in the letter is to Ribby Hall Village, an upmarket holiday complex with surrounds the listed hall, and which is not a heritage asset

appellant¹¹⁴, and it should not be forgotten that developing the appeal site causes harm to a non-designated heritage asset;

- n) In highway capacity terms, the letter suggests early liaison with the LHA, with a list of factors to inform discussions;
- o) There is no 'design' constraint identified;
- p) The ecological implications are no worse than the appeal site¹¹⁵;
- q) The appellant's highways witness agreed in cross-examination that the access implications were no different to those at the appeal site;
- r) In addition, it is better connected to the trunk road network and, crucially, to sustainable travel modes. Journeys by bus and train are considerably more appealing than at the appeal site. Unemployment is higher in Preston and Blackpool than here in Chorley and South Ribble. There is no sports field to lose.

9.58. UWAG's evidence carefully and reasonably demonstrates that there are at least two alternative sites existing in Stakehill and Kirkham, which appear to do better than the appeal site against the appellant's own criteria. Even accepting the approach and criteria set out, Stakehill and Kirkham are no worse than the appeal site. In reality, nothing raised by the appellant in this inquiry has done anything to upset that conclusion.

9.59. An urban setting is generally preferable considering the many underused or vacant brownfield sites identified on local authority registers in the North-West. This preference tallies with the appellant's own assumptions for new prison builds. Rural locations are unhelpful for staff retention and visitor access due to transport services.

9.60. There is no site in the region that is at the present stage of the appeal process so it is likely that no site could as of now deliver a prison sooner than this appeal site could, a point apparently made by way of re-examination of the appellant's planning witness. However, other sites might deliver later but cause less harm. It would be perverse if the advanced stage of the appeal process gave rise to a substantive justification for the grant of planning consent. That is not an 'advantage' of the appeal site in planning terms (especially given the state of the evidence underpinning the claim of urgent need).

9.61. There is no compelling reason for the new prison to be developed on the appeal site, rather than at alternative sites. UWAG's evidence has shown the availability of alternative sites in the appellant's site search. No weight should be attached to that proposition. Without that component of the appellant's case, no very special circumstances can, or do, arise.

¹¹⁴ And even if there is a concern about the impact on the Grade II listed Ribby Hall, for the reasons given by UWAG (CD G4) and not challenged in any meaningful way, there is no basis to treat this as any kind of constraint. The hall is surrounded by the holiday park development

¹¹⁵ The discussion about the potential for it to be a foraging site for pink-footed geese led only to the conclusion, expressed by the appellant's ecology witness, that it was no different to the appeal site in ecological terms

The planning balance and conclusion

- 9.62. The final issue to determine is whether the benefits and other factors are such that they can be properly described as 'very special' and clearly outweigh the harms identified. If they do clearly outweigh them, then planning permission will likely follow. But the hurdle is an important one, not just to outweigh the harms but to do so 'clearly'. Although there are benefits from this proposal, the plans also cause considerable harm to a range of interests.
- 9.63. For all the reasons given here and also by the Council, we invite the SoS to find that the balance of competing priorities and considerations should be settled in favour of the Government's fundamental aim of keeping the Green Belt land permanently open here. Accordingly, this appeal should be dismissed.

10. The Case for Interested Parties

- 10.1. The following parties made representations to the Inquiry:

*Councillor Mary Green – South Ribble Borough Council (SRBC)*¹¹⁶

- 10.2. Garth and Wymott prisons hold 850 and 1200 prisoners respectively. With 1,700 more prisoners planned, that would practically double the number. Since the prisons were built in 1979 and 1988 there have been no improvements to the local area. Although local residents have embraced changes to their environment from a rural to urban feel, they have suffered from excessive speeding traffic down Ulmes Walton Lane and into Moss Side and Leyland at all times of the day, 7 days a week, as the staff work different shift patterns. This does not include deliveries, visitors' cars or taxis, or prisoner movements.
- 10.3. This application went before SRBC Planning Committee for consultation. After due consideration it was unanimously refused for the same reasons as Chorley (namely Green Belt, highway safety, inadequate highway infrastructure and harmful impact on the amenity of local residents). SRBC also raised other points which they felt were necessary to address if the proposal proceeded.
- 10.4. There would be inconvenience during the construction phase in terms of dust, mud and damage to road surfaces. There is a lack of doctors and school places for incoming staff and their families. It is strange that this prison is not being built nearer to the large cities in the North-West where most of the prisoners will come from. This is a rural area where residents expect to live peacefully. Ulmes Walton Lane is narrow and winding and has no pavements and no lighting. The development would cause a massive increase in traffic resulting in gridlock in the Dunkirk and Slater Lane areas.
- 10.5. SRBC suggests that infrastructure needs constructing before the start of development. The pavements need upgrading or creating. The roads need surface treatment and the carriageway narrowed to slow the traffic. All these need to be implemented as traffic control measures. The local junctions all need improving. There should be contributions to the dualling of the B5253¹¹⁷ and a bus service appropriate to the needs of this scale of development.

¹¹⁶ CD K4

¹¹⁷ This road connects the A582 to the north of Leyland to the A581 near Ulmes Walton and has a junction with Dunkirk Lane that leads to School Lane and Ulmes Walton Lane

Finally, SRBC suggested an amount of funding to assist with the re-opening of Midge Hall railway station to enable greater access to the prison by train. It would benefit both visitors and staff, so easing traffic problems.

- 10.6. In conclusion, the appellant needs to reduce the impact on the amenity of local residents if the development were to be allowed.

Councillor Michael Green – SRBC and Lancashire County Council ¹¹⁸

- 10.7. There are some benefits from this development, namely the provision of prison places and the employment opportunities. There is a prison estate in this location, but the imposition of a very large additional prison would virtually double the number of prisoners and staff and would not be sustainable.
- 10.8. The decision of Chorley Borough Council is correct. This proposal would cause harm to the Green Belt to which substantial weight must be afforded. In addition to the significant reduction in openness, the scale and mass of the proposal would have an adverse impact on the character of the local area. It would have an unacceptable impact on highway safety due to the significant increase in traffic and the current inadequate highway infrastructure. The potential noise and disturbance associated with the traffic would harm the amenity of residents.
- 10.9. If the regional need for this new prison is accepted, it could be built anywhere in the North-West. The site is in Chorley but close to South Ribble. Neither area has low employment. There are clearly areas across the North-West with much higher levels of unemployment. Recent permissions and further proposed developments in Chorley and South Ribble will deplete an already small pool of potential local employees. Recruitment of staff is already difficult locally. The appellant has indicated that staff would be recruited from a 40-mile radius and so the weight to be afforded to any benefits for residents of Chorley and South Ribble is clearly reduced.
- 10.10. The rural location of the site would make it difficult to access for construction traffic, prison staff, visitors and service providers. If the appeal is successful, it is important that infrastructure improvements are made to support a significant scale of development. Ulnes Walton Lane (and School Lane further north) is a winding country lane with a lack of pavements and lighting and with dangerous bends. It is used by pedestrians, cyclists, horse-riders and farm equipment in addition to cars and HGVs. The speed limit of 40mph (20mph in the built-up area) is rarely enforced. We can promote walking and cycling, but in this rural location the reality is that over 90% of journeys would be by car, while car sharing is unlikely due to shift patterns. The impact on junctions and the highway network needs to be robustly assessed including the cumulative impacts of committed developments.
- 10.11. If this proposal is permitted, significant highway mitigation is needed, including improvements to the junctions of School Lane with Dunkirk Lane and Slater Lane; a contribution to the dualling of the busy A582 and B5253; traffic calming measures on Ulnes Walton Lane and School Lane to ensure speed limits are adhered to, with gateway treatments, road narrowing and a Pegasus

¹¹⁸ CD K5

pedestrian crossing; and public transport improvements such as a fully funded regular bus service to Leyland, Chorley and Preston, and funding to re-open the station at Midge Hall on the Preston to Liverpool line. These improvements to transport infrastructure would make this development more sustainable and reduce the negative impact upon the amenity of local residents.

Katherine Fletcher MP

- 10.12. I have submitted written correspondence on this proposal already and consider that it should be rejected in its current form. There are two or three major areas that need more work. Infrastructure is the number one issue. I am aware of the proposed traffic mitigation that has been agreed with the LHA, but there is a need to look at the wider network where roads and villages would be impacted. For example, Croston is a historic village with a road not suitable for traffic, particularly HGVs. Ulnes Walton Lane is too small and narrow. It feeds into a 20-30mph zone in Leyland where accidents occur on Dunkirk Lane.
- 10.13. There is a lack of appropriate access from other areas and a lack of public transport options. Even with bus enhancements you would still need to use the same roads. While the proposal cannot be edited at this stage, I have discussed with Ministers the option of a north-west access to the site (via Ridley Lane) and the re-opening of Midge Hall railway station. This is not an objection in principle to the development, but the impact on highway safety is a concern. Alternative plans could be submitted and concerns responded to.

11. Written Representations

- 11.1. Around 150 representations were received at the application stage from local residents and statutory consultees. There were objections relating to a number of issues, including the impact on the Green Belt, the character and appearance of the area, and highway safety as outlined above. Concerns regarding the effect on the living conditions for occupiers of neighbouring properties were not just limited to noise and disturbance from traffic, but also general noise and disturbance from prison-related activities as well as effects on privacy, outlook and light. Some local residents expressed safety worries for them and their families arising from visitors and day release prisoners using the nearby bus stops. Criminal activities were also cited with illegal items being thrown or flown over the security fencing. Other concerns raised related to flood risk, with existing run-off onto Moss Lane, and the effect of local wildlife and habitats. Some commented that there was a poor level of public consultation with the wider community.
- 11.2. The responses from statutory consultees¹¹⁹ generally raised no fundamental concerns with matters able to be addressed via conditions and/or obligations. Sport England has objected to the loss of the playing field within HMP Wymott, noting that no exceptions had been demonstrated contrary to its playing fields policy and NPPF paragraph 99. Sport England has maintained its objection regarding the loss of playing field, stating that it meets the definition of a playing field and the lack of use and poor drainage has no bearing on its lawful use. Sport England's concerns relate to prisoners being able to access

¹¹⁹ CD B1 to B15

adequate sports and leisure facilities for their health and well-being. It seeks a replacement facility to compensate for the loss.

- 11.3. Over 100 representations¹²⁰ were received at the appeal stage from local residents as well as Katherine Fletcher MP. These representations raised many of the same issues outlined above. In addition, there were concerns relating to the carbon footprint of extra car journeys, as well as air quality and light pollution effects. There were concerns about the impact on health and well-being during the construction phase along with noise and emissions from the new boiler house and relocated pump house.
- 11.4. Some suggested the use of an alternative access to the site via Ridley Lane to the north-west to reduce some of the traffic concerns and mitigate the risk of relying on one access via Moss Lane. Others noted that there were inadequate staffing levels at the existing prisons and that recruitment of staff to the proposed prison would be difficult. They also noted the poor conditions within the existing prisons. Objectors also highlighted concerns with contaminated land given the previous use of the area as a munitions depot.

12. Conditions and Obligations

- 12.1. Following discussions at the Inquiry, the parties provided a final list of suggested conditions¹²¹. I have used this list to inform the schedule of conditions contained in Annex 1. Should the SoS decide to grant planning permission, I consider all of the conditions in the annex to be necessary and consistent with the tests in NPPF paragraph 56. The reasons for each condition, including why some need to be pre-commencement, are set out in the annex. The appellant has provided written agreement¹²² for any pre-commencement conditions relating to the full permission element of the proposal.
- 12.2. With regards to Condition 4, my conclusions and recommendation that follow is that Condition 4B should be applied so that the off-site highway works would be in place before construction of the prison begins. This is to mitigate the effect on the road network of construction traffic. Should the SoS disagree, then Condition 4A would be necessary to ensure that the required off-site highway works are in place prior to the occupation of the prison.
- 12.3. A finalised and executed S106 agreement¹²³ was submitted following discussions at the Inquiry. The Council has provided a Community Infrastructure Levy (CIL) Regulation 122 Statement¹²⁴ setting out the justification for each obligation. Regulation 122 of the CIL Regulations 2010 (as amended) states that planning obligations must be necessary to make the development acceptable in planning terms, directly related to the development, and fairly and reasonably related in scale and kind to the development. These three statutory tests are repeated in NPPF paragraph 57.

¹²⁰ CD D1 to D134

¹²¹ CD K23

¹²² CD K26 paragraph 4

¹²³ CD K27

¹²⁴ CD K18

- 12.4. Schedules 1 to 5 of the S106 contain the site plan, phasing plan, bowling green and club house plan, the biodiversity net gain area calculation plan, and the description of development. Schedule 6 would secure the biodiversity net gain enhancements that are being advanced as a benefit of the proposal, as well as the monitoring of these enhancements. Biodiversity enhancements are supported by CLCS Policy 22 and CLP Policies BNE9 and BNE11 which seek opportunities to conserve and enhance habitats and species. Therefore, these obligations meet the three statutory tests.
- 12.5. Schedule 6 would also ensure the delivery and maintenance of the replacement bowling green and club house and require it to be made available to Wymott Bowling Club or any successor/alternative club prior to the existing facilities being made unavailable. This would secure the uninterrupted continuation of sports facilities and comply with NPPF paragraph 99, CLCS Policy 24 and CLP Policy HW2 which seek to protect access to sport. Therefore, this obligation meets the three statutory tests.
- 12.6. Schedule 7 would provide an enhanced bus service contribution to improve the frequency of the existing Preston to Croston bus service that goes via the site. It would also provide an additional bus service contribution to allow for a counter-clockwise two-way service between Preston and Croston (currently the bus does not provide a return journey to Croston and its train station). These obligations would comply with CLCS Policies 2 and 3 as well as NPPF paragraph 112 which seek to improve public transport and sustainable travel and thus would meet the three statutory tests.
- 12.7. Schedule 7 would also provide funding to resurface the existing cycle route between the site and Leyland via Nixon Lane with improved signage. This would enhance sustainable modes of transport and comply with CLCS Policy 3 and CLP Policy ST1. The schedule would also provide a contribution towards the monitoring of the Travel Plan by LHA to encourage the widest range of travel choices in accordance with CLCS Policy 3 and NPPF paragraph 113. Therefore, these obligations would meet the three statutory tests.
- 12.8. Finally, Schedule 7 would secure a financial contribution towards the A581 Corridor Improvement Scheme. This is intended to address capacity issues at the junction between the A581 and Ulnes Walton Lane. For the reasons discussed in my conclusions on highway safety, I do not consider that this contribution would be effective or meet the three statutory tests.
- 12.9. With the exception of the A581 contribution, all of the obligations meet the three tests set out in Regulation 122 of the CIL Regulations 2010 and NPPF paragraph 57. Therefore, they can be taken into account.

13. Inspector's Conclusions

13.1. From the evidence before me at the Inquiry, the written representations, and my inspection of the appeal site and the surrounding area, I have reached the following conclusions. The numbers in square brackets refer back to earlier paragraphs which are relevant to my conclusions

Main Considerations

13.2. The Case Management Conference took place on 19 May 2022 and identified five main issues. Following the recovery of the appeal, these have been carried forward unaltered as the following main considerations:

- 1) the effect of the proposal on the openness and purposes of the Green Belt;
- 2) the effect of the proposal on the character and appearance of the area;
- 3) the effect of the proposal on highway safety;
- 4) the effect of the proposal on the living conditions of occupiers of nearby properties with regard to noise and disturbance; and
- 5) whether harm to the Green Belt, and any other harm, would be clearly outweighed by other considerations (including the need for the development, the availability of alternative sites, the socio-economic benefits, and biodiversity net gain) so as to amount to the very special circumstances required to justify the proposal.

13.3. Matters relating to character and appearance were not covered in the Council's reasons for refusal. However, they were raised by the parties before the Inquiry and there has been sufficient opportunity for all parties to present and test evidence on this topic. Therefore, I have taken the topic into account as part of my report. **[7.10]**

Main Issue 1: Green Belt openness and purposes

13.4. It is common ground that the proposal would represent inappropriate development in the Green Belt as it is not covered by one or more of the exceptions in NPPF paragraphs 149 and 150. The main parties¹²⁵ also agree that it would result in harm to Green Belt openness and conflict with one of the five Green Belt purposes in NPPF paragraph 138, namely (c) "to assist in safeguarding the countryside from encroachment". The dispute between the parties relates to the level of harm and extent of conflict. **[6.1, 7.5, 8.3, 9.9]**

13.5. Part of the appeal site comprises previously developed land as set out in CLP Policy BNE5. It contains a number of structures including a boiler house, agricultural buildings, former munitions warehouse and areas of hardstanding for vehicle movements and parking. However, large parts of the site are undeveloped, including the fields and grassland between the aforementioned structures and the playing field currently associated with HMP Wymott. There would be a significant increase in built development on the northern part of the site where the entirety of the new prison would be located, while a large car park would be sited on the existing playing field. On the southern part of the

¹²⁵ The appellant, the Council, and UWAG

site, there would be a new bowls club house and car park at the top end of an existing open field. Therefore, in spatial terms, the proposal would cause significant harm to openness. **[7.6, 8.4, 8.6, 9.11, 9.12]**

- 13.6. In visual terms, the large and urban forms of HMP Garth and HMP Wymott immediately adjoin the site along with the housing north of Willow Road. There is also well-established planting along the northern boundary between Pump House Lane and Ridley Lane as well as along the west side of Moss Lane and adjacent to the proposed bowling club elements. The site is not highly visible across the wider area and is relatively well-contained. However, there are public footpaths through and along the boundaries of the site. Travelling along a realigned Pump House Lane to and from Leyland, it would be possible to see large parts of the new prison even once proposed vegetation has matured given the scale and footprint of the proposal.
- 13.7. Moreover, the view north across fields from the footpath between Willow Road and the existing boiler house would be extinguished as the route would form part of the perimeter path around the new prison blocks. The view south from the footpath between the roundabout and the woodland at Stanning's Folly would be eroded by the various elements of the new bowling club, including car parking, fencing and the club house itself, and only partly softened by proposed tree planting. The replacement boiler house would be positioned further into the site than the existing structure, but its flue could be up to 22m tall and visible above other buildings. Therefore, despite the presence of existing built form and the screening effects of existing and proposed vegetation, there would be a significant effect on openness in visual terms. The site would appear less open than it does now. **[7.6, 7.7, 8.7, 8.8, 9.14]**
- 13.8. Notwithstanding the existence of structures, large parts of the site are essentially rural. This is particularly the case on the northern side, with fields surrounding the agricultural and former munitions depot structures, but also to the south of the roundabout. As a consequence, given its scale and footprint, the proposal would result in a significant conflict with the Green Belt purpose of safeguarding the countryside from encroachment. **[7.9, 8.10, 9.13]**
- 13.9. In conclusion, the proposal would have a significant harmful effect on the openness of the Green Belt and cause significant conflict with one of the five Green Belt purposes. This harm and conflict should be weighed in the overall planning balance.

Main Issue 2: Character and appearance

- 13.10. As noted above, the northern and southern parts of the site contain fields interspersed with intermittent structures and footpaths/roadways. These parts of the site back onto wider open countryside which contain a patchwork of fields separated by hedgerows and the occasional larger area of woodland. As a consequence, these parts of the site have a rural character and appearance notwithstanding the nearby presence of HMP Garth and HMP Wymott and the housing north of Willow Road. In contrast, the central part of the site has an institutional character and appearance because it contains large areas of car parking associated with the two prisons along with entrance/ancillary buildings and the playing field for HMP Wymott. **[7.11, 8.29, 8.30, 9.16]**

- 13.11. The site shares some of the positive attributes associated with the Lancashire Coastal Plain Landscape Character Type, which is characterised as a gently undulating agricultural landscape with hedged fields. The site also shares some of the urbanising influences that detract from this landscape character type with regard to existing built form, road infrastructure and lighting. Overall, the site has a medium level of susceptibility reflecting its mix of urban and rural characteristics. **[7.11, 8.29]**
- 13.12. The existing site is not prominent in long distance views from the wider landscape due to intervening buildings and vegetation. Nevertheless, it can be seen in short and medium views from public rights of way such as Pump House Lane. Views across the agricultural fields in the northern part of the site can be seen from the footpath between Willow Road and the existing boiler house and the eastern end of the footpath between Pump House Lane and Ridley Lane. The footpath between the roundabout and Stanning's Folly provides views south across the adjoining field and countryside. A number of residential properties on Wray Crescent look rearwards towards the northern part of the site. The existing prisons are floodlit for security purposes which is visible from adjoining roads and footpaths at night. **[7.13, 8.32, 8.33, 9.20]**
- 13.13. Most of the proposed built form would be located in the northern part of the site and would result in the loss of fields either side of Pump House Lane. For the southern section of the lane, nearest to Willow Road, there would be a considerable degree of urbanisation in landscape and visual character for walkers and other users due to the extent of built form and limited landscape screening. Further north on this lane (Viewpoint 6 in the LVIA – CD A25), there would be a significant increase of built development in a countryside location that would be highly visible at Year 1 due to the scale and footprint of buildings. Vegetation planting by Year 15 would help to soften the effects and would not be out of character given the existence of woodland and hedgerows in this landscape character type. However, the development would still be noticeable above the treeline from this viewpoint due the overall height of the four storey house blocks. **[7.12, 7.14, 8.30, 8.31, 9.18, 9.20]**
- 13.14. The footpath between Pump House Lane and Ridley Lane would continue to be screened by the existing tree belt which would be extended along its length. Although this would restrict views of the new built form, there would be a loss of views south across the fields in the northern part of the site. The footpath between Willow Road and the existing boiler house would be extinguished along with any views it currently provides across fields to in the northern part of the site. **[7.14, 8.32, 8.33]**
- 13.15. The lighting of the new prison at night would be noticeable from Willow Road and Pump House Lane particularly at Year 1, although the effects can be offset through the use of appropriate lamps and would lessen over time as vegetation screening matures. Occupants of properties on Wray Crescent would be able to see the development to the rear, but these are private views and sufficient separation distance would be maintained. **[7.13, 7.15, 9.21]**
- 13.16. In the southern part of the site, the bowling green and club house would introduce urban fringe recreational development into a currently open field with clear views across the countryside to the south. Although the scale of development here would be limited, and some tree planting is proposed, harm

would nevertheless be caused to the landscape and visual character of this part of the site. **[7.14, 8.32]**

- 13.17. The proximity of built form at the existing prisons means that this is not a wholly rural site. Nevertheless, the proposal would erode the predominantly rural character of parts of the site and negatively affect views across open fields and countryside from public rights of way. Mitigation through tree planting, while not inappropriate in principle in this location, would not entirely screen the new built form even in the longer term. Therefore, I consider there would be a significant harmful effect on the character and appearance of the area, contrary to CLP Policy BNE1(c). This carries significant weight in the overall planning balance. **[7.16, 8.34, 9.17]**

Main Issue 3: Highway safety

Operational phase effects

- 13.18. It is common ground between the appellant and the Council that the approach to the traffic surveys is appropriate and has been validated by the LHA. It provides a suitable baseline and the TA takes into account committed development. **[6.10, 7.23, 10.10]**
- 13.19. The proposed prison would be accessed via Ulmes Walton Lane and Moss Lane, as is the case for the existing prisons, although there would be a separate access off Moss Lane further to the north than the existing access. In the operational phase, there is no dispute that the prison would generate around 1,330 trips per day from staff and visitors. This excludes ancillary traffic, such as deliveries and contractors, which could take place at any time of the day albeit trip numbers are likely to be much lower than for staff and visitors. **[7.31, 8.16, 9.25]**
- 13.20. 1,330 trips would be a significant increase in the number of daily vehicle movements. The section of Moss Lane north of the existing prisons access would see a 322% increase in traffic and the Moss Lane / Ulmes Walton Lane junction a 48% increase. However, merely relying on percentage increases as evidence of a highway safety issue is overly simplistic. It is necessary to consider any existing safety issues along with the characteristics and capacity of individual roads and junctions. **[7.24, 8.15, 8.16]**
- 13.21. Data provided by the appellant shows that the surrounding road network experienced around half of the expected numbers of personal injury accidents (PIA) for the periods 2014-2018 and 2016-2020 with no noticeable difference allowing for Covid suppressed traffic movements in 2020. The appellant forecasts that PIA would only increase by 0.5 per year with the proposal in place in 2025. Therefore, this indicates that the proposal would not exacerbate any safety issues insofar as PIA is concerned. The appellant has also demonstrated that Moss Lane and Ulmes Walton Lane would not exceed their link flow capacity in terms of the projected number of vehicles per hour in the AM and PM peak **[7.21, 7.22, 7.25]**
- 13.22. Nevertheless, there are hazards and risks associated with different parts of the local road network that are relevant to this proposal. Ulmes Walton Lane is a narrow 40mph country lane with several bends. The junction with Moss Lane is on a bend where forward visibility looking south is restricted for vehicles

turning right into Moss Lane. With the development in place, there would be an increase in queuing and waiting times for traffic turning right. This part of the junction would be close to capacity based on an estimated 0.82 RFC, with a PCU queue of 4.4 vehicles. **[8.18, 10.10]**

13.23. The junction also has a post box and bus stops either side which require users to walk on the verge or road. Although the number of people using these features is low, and there are similar facilities to the north on Willow Road, they are relied upon by residents on this section of Ulmes Walton Lane and people accessing the existing prisons. An increase in the number of vehicles using the junction (12 cars a minute in the AM peak) would create an increased risk of conflict with pedestrians. **[7.26, 8.17, 8.19, 9.22]**

13.24. The appellant's proposed traffic calming measures for either side of the junction would involve a replacement chevron sign and new coloured surface treatment at the bend to the north, and reference to reviewing and amending existing road markings at the junction. Additional measures, including further south on Ulmes Walton Lane, are said by the appellant to be similar to those found elsewhere on the lane, but there are no drawings or agreements with the LHA on specific details. Moreover, the appellant does not propose to provide footways linking the northbound bus stop to the footway on Moss Lane, meaning that people would continue to walk in the road or on the verge to access bus services. Thus, there would be an increased risk of vehicle and pedestrian conflicts at the junction that would not be adequately mitigated. **[7.26, 8.19, 8.20]**

13.25. Ulmes Walton Lane is also used by equestrians and recreational cyclists and has crossing points for walkers using public rights of way. An increase in traffic would have implications for these non-motorised users. However, such users are typically restricted to certain times of the day and week and generally dispersed. Therefore, it is unlikely that the proposal would materially worsen the risks to these users. As a consequence, there would be no need for formalised crossing points of the lane where it meets a public right of way. **[7.26, 8.16, 10.10, 10.11]**

13.26. Further north, heading into Leyland where the road becomes School Lane, the junction with the B5248 Dunkirk Lane would continue to operate within capacity as a result of this development. The appellant has put forward detailed traffic calming measures which would address traffic speeds on this part of the lane. While it is apparent that there are traffic issues in the wider area through to Leyland and the M6, it has not been shown that the proposal would worsen these issues to the extent that mitigation is needed. **[7.26, 10.5, 10.11 10.12]**

13.27. Moss Lane is straight and relatively wide and suffers from excessive traffic speeds. The proposed traffic calming measures would involve 'slow' road markings and a narrowing of the carriageway in two locations, either side of the proposed new access towards the northern end of the road. It would assist with traffic speeds on the approach to the junction, although given the length of Moss Lane, it remains likely that vehicles would still be tempted to speed further south. **[7.26, 8.17]**

13.28. The final key area of the local road network is the junction between Ulmes Walton Lane and the A581. The A581 is a busy road between Chorley and

Rufford and the LHA has identified the need for various improvements between Rufford and Euxton. This arm of the junction is almost at capacity in the AM peak now at 0.84 RFC and would be over-capacity in 2025 and 2026 with the development in place at around 1.1 RFC. Queues would increase from 6.5 PCU at present to 49.7 PCU in 2026, with delays increasing from nearly 32 seconds to over 210 seconds. **[7.27, 8.20]**

- 13.29. The parties agree that mitigation is needed to address this significant impact. While the appellant initially proposed a signalised junction to widen the road and provide separate space for right-hand turns, they are content with the LHA's preferred option for a mini-roundabout. The appellant has put forward a financial contribution in the S106 of over £485,000 towards the A581 improvement scheme. However, there is no design for a mini-roundabout at even an indicative level and no modelling of the effects it would have with the development in place or how it might affect the flow on other arms of the junction. There is no evidence of any costings, so the financial contribution may be either insufficient or excessive. As noted above, I do not consider that this contribution would meet the relevant statutory tests so I have not taken it into account in my assessment. **[7.27, 7.28, 8.20-8.23, 9.24]**
- 13.30. The appellant is satisfied with a planning condition that would prevent occupation of the new prison until all off-site highway improvement works are in place including the A581 improvement scheme. However, the scheme is subject to a business case that has been submitted to the Department for Transport. No information on this business case has been provided with this appeal, including overall costs and timescales. Condition 4 (in both options 4A and 4B) requires the completion of the scheme as a whole before commencement or occupation of the prison, but there are no details on the rest of the scheme to judge the likely completion date. **[7.28, 8.20]**
- 13.31. Negatively worded conditions prohibiting development or occupation authorised by a permission until a specific action has been taken should not be used where there are no prospects of the action in question being performed within the time-limit imposed by the permission¹²⁶. Given that Condition 4A (the appellant's preferred condition) would only prevent the occupation of the new prison rather than the commencement of works for it, there is some prospect that the junction works and overall A581 scheme could be implemented first, even if that took several years. Condition 4B (the Council's preferred condition) would require the works to be carried out before the commencement of the new prison. This would be a stricter time limit for the completion of the A581 improvement scheme which reduces further the prospect of the works being carried out within the time-limit of the permission.
- 13.32. Nevertheless, while the LHA has no objection to the proposed mitigation works for the A581 junction, it has not been demonstrated that the works would resolve capacity issues or that the financial contribution would be sufficient. The inability to satisfactorily mitigate the effects on this junction means that the proposal would have an unacceptable impact on highway safety. **[7.19, 7.28, 8.20-8.23]**

¹²⁶ Planning Practice Guidance Reference ID: 21a-009-20140306

Construction phase effects

- 13.33. Construction traffic has not been modelled or assessed by the appellant, while the mitigation measures discussed above have been designed for operational traffic. All construction traffic would use Ulnes Walton Lane and Moss Lane. The appellant contends that in an average construction month the number of vehicles is predicted to be lower than the predicted operational traffic, at around 1,140 trips per day. However, this would still be a significant increase in traffic, including around 146 HGVs per day, using roads and junctions over a three-year period where there are safety and capacity concerns as outlined above. Moreover, during the peak construction period of around six weeks, there would be a greater number of vehicles journeys at over 2,000 car movements and over 100 HGV moments per day. The width and length of HGVs creates additional hazards on narrow roads such as Ulnes Walton Lane and problematic junctions like the junction between Ulnes Walton Lane and the A581. **[7.29, 8.24, 8.25, 9.22, 9.23]**
- 13.34. An agreed final CTMP would set out a range of measures and traffic could be managed to avoid peak hours. Furthermore, the movements could be dispersed across more days given that there could be more construction days per month than the draft CTMP allows for. However, there would still be a significant amount of traffic using a local road network where there is a need to secure adequate mitigation. As noted above, I have reservations on the extent and effectiveness of mitigation measures for different parts of the road network, including the A581 junction. Therefore, it has not been demonstrated that highway effects at the construction phase can be adequately mitigated. **[7.29, 7.30, 8.26]**

Conclusions on highway safety

- 13.35. In conclusion, the proposal would exacerbate existing hazards and risks within the local road network, where the appellant's evidence (including the TA) on the proposed mitigation measures is lacking in detail and confidence that they would have the desired effect. Therefore, the proposal would have an unacceptable effect on highway safety contrary to CLP Policy BNE1(d) and NPPF paragraphs 110(d) and 111. This weighs heavily against the proposal in the overall planning balance. **[7.17, 7.35, 8.12-8.14, 8.27]**
- 13.36. In the event that the SoS decides to grant planning permission, I recommended that Condition 4B is imposed rather than Condition 4A. Given the amount of construction traffic and the potential for a similar if not worse levels of impact as operational traffic, it would be sensible to ensure that off-site highway improvements are implemented before development commences.

Main Issue 4: Living conditions

- 13.37. The concerns under this main issue relate primarily to the effects of traffic movements and car parking on the levels of noise and disturbance. The property most affected would be Windy Harbour, which would be opposite the proposed access from Moss Lane. The appellant has modelled the noise effects that would occur from construction and operational traffic (along with car parking) and has compared this to the baseline situation. The modelling is based on trip data from the TA and the draft CTMP and presumes that traffic adheres to the speed limit. **[7.36, 7.38, 9.25]**

- 13.38. The modal split in the TA assumes that the majority of trips would be by car drivers (83%) due the nature of the location. The assumption that 8% of trips would be by car passengers depends on an effective Travel Plan in a workplace where most staff work shift patterns. Improvements to the bus service and cycle routes may encourage more people away from their car, but these options will need to be convenient with staff working hours and their start location. The TA data does not include ancillary operational traffic, while the exact levels of construction traffic is not clear at this stage. As the TA notes, speeding is also an issue on Moss Lane although it is likely that traffic would be travelling at slower speeds on the approach to and from the proposed access for safety reasons. As such, the noise modelling can only be described as a best guess in terms of traffic numbers, speeds, and travel behaviour. **[7.31, 9.26, 9.30]**
- 13.39. At the operational phase, the modelling shows that daytime noise levels at the ground and first floor of Windy Harbour would not exceed the LOAEL recommended by the DMRB of 55dB. At night-time, noise levels are already on the DMRB LOAEL threshold of 40dB and would be exceeded by the development by around 2-5dB, depending on the elevation and floor level. The night-time noise level would not exceed the WHO recommended LOEAL of 45dB. **[7.39, 7.40, 9.27(a)-(g)]**
- 13.40. The DMRB guidelines are focussed on road impacts whereas the WHO guidelines look at community noise on a broader basis. Nevertheless, the modelling suggests an increase in noise levels that would be perceptible over 3dB, which at night would exceed the DRMB LOAEL and equal the WHO LOAEL. Therefore, there is likely to be some adverse effect on the living conditions of occupiers of Windy Harbour in terms of noise and disturbance from operational traffic.
- 13.41. At the construction phase, the modelling indicates increases in noise levels at Windy Harbour of around 4dB during the daytime for the average construction period and around 5dB for the peak period. This would not exceed the DMRB LOAEL but would still be moderate and major impacts respectively according to the DMRB. The suggested mitigation of a 20mph speed limit during the peak period would reduce the noise impact to a moderate level similar to the average period where no mitigation is proposed. The noise impacts at this phase would be perceptible to occupants of Windy Harbour but only just within the threshold for observed adverse effects. **[7.39, 9.27(h)-(l)]**
- 13.42. Assuming that vehicle parking for the new prison would only take place within the proposed car park, the noise generated from engines starting and doors slamming would be well below the LOEAL levels in the DMRB and WHO guidelines. The size of the car park (525 spaces) is predicted by the TA to be sufficient to accommodate the likely maximum number of staff and visitor vehicles on site at any one time (499 vehicles). This prediction is based on the TA modal split and relies on 17% of staff traveling by means other than as a car driver. As noted above, this is only a best guess and depends on the attractiveness of alternative travel options and the effectiveness of the Travel Plan. **[7.32, 7.33, 7.41, 9.29, 9.30]**
- 13.43. It is possible that not all prisoners would take up their full visitor entitlement of two visits a month as assumed by the TA, taking into account the option for

virtual visits amongst other things. Nevertheless, the TA indicates that visitor parking would account for a small proportion of the overall predicted number of parking spaces required. Therefore, any reduction in visitor numbers is unlikely to offset any increase in staff parking should the proportion of staff driving be higher than forecast. In the event that the car park was full, people would be likely to park on Moss Lane and other roads to the north given that there are no parking restrictions and there is plenty of available space, particularly on Moss Lane. There is no specific noise modelling for such a scenario, but this would result in some noise and disturbance for the occupiers of nearby properties including Windy Harbour. **[7.33, 9.31, 9.32]**

13.44. In terms of other living condition issues, headlights from vehicles exiting the site onto Moss Lane would be directed towards Windy Harbour. However, this could be mitigated through additional screening along the property boundary and the ability to close curtains on affected windows at night. There may be an increase in people walking past Windy Harbour, but the property is set back from the road and screening could be used to mitigate any overlooking effects. As noted above, there would be sufficient separation distance between existing properties to the north of Willow Road and proposed prison buildings to avoid material adverse effects with regard to outlook, privacy and light. Although the operation of the prison would generate noise and activity, there is little evidence to indicate that this would cause unacceptable levels of disturbance. **[6.11, 6.13, 7.42, 11.1]**

13.45. In conclusion, there would be some adverse effect from the proposal on the living conditions of occupiers of Windy Harbour in terms of noise and disturbance from operational and construction traffic, with the potential for further adverse effects if on-street parking took place on adjoining roads. Notwithstanding some uncertainties regarding the traffic data underpinning the noise modelling, none of the modelled levels would equate to a significant or unacceptable adverse effect level. In that regard, there would be no conflict with CLP Policy BNE1(g) which seeks to avoid an unacceptable degree of noise disturbance to surrounding land uses. Therefore, the overall effect of the proposal on the living conditions of occupiers of nearby properties with regard to noise and disturbance would be acceptable. **[7.43, 9.28, 9.32]**

Main Issue 5: Other considerations (including benefits)

The need for the development

13.46. There is no dispute between the main parties that the prison population is due to increase in the next decade and that the refurbishment and expansion of existing prisons would not meet all of this demand. There is also agreement that the proposed prison would form one of four regional prisons located in areas of greatest demand, and that there is a specific need for new Category C resettlement prison places in the North-West. The disagreement relates to the extent and urgency of need at both the national and regional level. **[6.2, 6.3]**

13.47. As of mid-July 2022, the adult male prison estate was operating at 98.3% capacity. The total prison population in England and Wales is projected to reach 98,500 by March 2026 from its current level of 80,115 in June 2022. As the appellant notes, these projections are based on a suite of modelling tools along with judgment and experience. They are signed off by senior leadership in the MoJ, the Home Office and the Crown Prosecution Service and have

National Statistic status. There is also external scrutiny from the Treasury who sign off spending reviews. The appellant accepts that there are inherent uncertainties in the projections as it is difficult to model changes in crimes, sentencing, police efficiencies, and extreme events such as riots. **[7.47, 7.49, 7.50, 9.44]**

- 13.48. It is evident that in the past couple of years, actual growth in the national prison population has lagged behind the projections. The present population is around 6,000 lower than the 2020 projections and 3,000 lower than the 2021 projections. Between November 2021 and May 2022, the prison population increased by an average of approximately 100 prisoners per month rather than the projected average of 650 per month. The 2021 projections forecast a return to pre-Covid prison population levels of around 83,600 by July 2022 but the June 2022 data shows that, in reality, it was around 3,500 places below that figure. **[9.43]**
- 13.49. The data covers a relatively short time period and there are inevitably fluctuations in projections from month to month. Nevertheless, the projections are based, in part, on assumptions that an increase in more than 20,000 police officers and the recovery of the criminal justice system post-Covid will result in more people going to prison. With regard to the former, it is possible that additional police officers could act a deterrent to criminal behaviour, but it is not unreasonable to assume an overall increase in crimes being detected based on the number of new officers. However, there is little data underpinning this assumption and uncertainty as to how greater detection rates would translate into more prison places. **[7.51, 9.45]**
- 13.50. In terms of the latter assumption, there is a significant backlog in the Crown Court as a consequence of Covid. According to the PAC report of March 2022, the backlog stood at 61,000 cases in June 2021, up from 41,000 in March 2020 and an all-time low of 33,000 in March 2019. The MoJ's plan is to reduce the backlog to 53,000 by March 2025 which would still be well above pre-Covid figures. The PAC report notes it would require a significant increase in judges to achieve the March 2025 target and casts doubt on the MoJ's recruitment plan. It is clear from the MoJ's response to the PAC report that considerable financial investment is going into reducing the backlog, but it is not clear whether the reduction will be achieved along with its resultant effect on prison places. **[7.51, 9.45]**
- 13.51. The appellant states that the delay in lifting Covid restrictions in Crown Courts until March 2022 has had a 9-month effect on the 2021 projections. However, even if pre-Covid prison levels are achieved by April 2023 rather than July 2022, this would still be below the 2021 projections for this date by around 4,500 places. From the evidence before me, there are uncertainties that the projected national prison population for March 2026 will be reached. **[9.46, 9.47]**
- 13.52. There is clearly a need to provide modern, better designed prisons to address operational and maintenance issues with the current estate that dates back to the Victorian period in places. A more appropriate prison environment, with prisoners held in the right category prisons, would undoubtedly help with rehabilitation and the rate of reoffending. It is also apparent that the current operational capacity of 82,676 is not guaranteed due to the large ongoing

maintenance programme and the risk of losing places from riots or other unknown events. **[7.46, 7.53]**

13.53. In terms of the future capacity of the prison system, the usable operational capacity can change (currently a headroom of 2,500 is allowed for but this could reduce by 500) and there are at least two other prisons due to open in the next few years in the Midlands (HMP Fosse Way) and Yorkshire (HMP Full Sutton) with around 3,000 places between them. Other new prison places are in the pipeline. Around 11,000 out of the 20,000 additional places sought by the MoJ have either been delivered already or have planning permission. Given the above uncertainties with the projected March 2026 prison population, it is not clear how urgent the national need for more prison places actually is. **[7.52, 9.49]**

13.54. At the regional level, the appellant states there is an estimated capacity gap of 2,000 prison places by March 2026, based on existing prison capacity and population projections. However, the detailed figures behind this have not been provided to be able to understand how the number of regional places might change over the next few years. This makes it difficult to verify the accuracy of this statement. **[7.48, 9.42, 9.50]**

13.55. The appellant argues that the 1,715 place (seven houseblock) capacity of the proposed prison is necessary to meet this regional gap and maximise construction and operational efficiencies. One factor in this argument is the existence of around 1,350-1,400 Category C male prisoners, with less than 24 months left on sentences, who have a North-West home address but are being held in prisons outside the region. It is evident that they would benefit from serving the resettlement stage of their sentence closer to home, to better reintegrate into local communities. Although the proposed prison, if allowed, would not be open in time to meet this specific need, it is possible than this trend would continue into the future albeit the exact figures are unknown. **[7.48, 9.2, 9.48]**

13.56. However, it is apparent that two existing prisons in the North-West are due to be expanded or refurbished, at HMP Hindley and HMP Liverpool respectively, to provide nearly an additional 700 places. Even though these works are not necessarily providing the same type of prison places as the proposal, these additional places would help to address any regional gap. It weakens the case for a prison as large as the one proposed in this location. **[7.54, 8.42, 8.43, 9.50]**

13.57. In conclusion, there is an obvious need to update existing prison facilities and provide the right prisons in the right locations. However, the appellant's case that there is a very substantial and urgent need for more prison places has not been demonstrated. There are several uncertainties with the projections of prison places nationally, the future capacity of the system, and the regional capacity gap. Therefore, while there is a need for the more prison places in a general sense, I afford only moderate weight to this consideration in the overall balance. **[7.55, 8.41, 9.40]**

The availability of alternative sites

13.58. There is common ground between the parties over the site selection criteria used by the appellant to identify potential suitable sites in the North-West. An

initial search was carried out at the pre-application stage and was refreshed at the appeal stage. While some sites passed the mandatory requirements in terms of size and location, they were all ultimately dismissed for secondary or tertiary site specific constraints. The Council and UWAG have expressed numerous complaints about the transparency of this process and the availability of information on each site. There is no detail before me on how sites compared against the criteria including the appeal site. Nevertheless, the Inquiry ultimately focussed on the appropriateness of two alternative sites at HMP Kirkham and Stakehill Industrial Estate. **[6.3, 7.60, 7.61, 8.46, 9.53-9.56]**

13.59. The appellant's argument in closing that the alternative site had to be more appropriate in planning terms than the proposed site was at odds with the appellant's case up until this point. From the planning statement¹²⁷, statement of case¹²⁸, and planning proof of evidence¹²⁹, through to the opening statement¹³⁰ and the evidence of its planning witness, the appellant's position was that there was a lack of suitable alternative sites. The argument put forward in closing is consistent with case law, but equally there is nothing before me in terms of case law to say that it would be wrong to consider a site as good as the one being proposed. Both propositions are tested in the following paragraphs in relation to the two alternative sites. **[7.56, 7.57, 7.58, 9.51, 9.52]**

13.60. Both sites are located in the Green Belt and so share the same NPPF policy tests and the need to show very special circumstances. However, that does not mean they could not be more appropriate, depending on the degree of Green Belt harm and the assessment of other relevant planning issues. It would not be necessary to find a non-Green Belt site in order to show there were no alternative or more appropriate sites. **[7.63, 8.46, 9.57]**

13.61. The Kirkham site is a 32ha largely greenfield site to the west of HMP Kirkham, adjacent to the A583 and immediately to the south of the urban area of Kirkham. The appellant received negative pre-application advice from Fylde Council in 2020, unlike the appeal site where officer advice from Chorley Council was more positive. However, a negative response alone is not sufficient and it is necessary to look at the factors underpinning that response. **[7.64, 7.66, 9.57(j)]**

13.62. Fylde Council commented that three Green Belt purposes would be affected, but Kirkham does not appear to be a large built-up area or a historic town. Therefore, purposes (a) and (d) in NPPF paragraph 138 do not appear to be applicable, only (c) regarding countryside encroachment which is the same for the appeal site. The appellant misunderstood Fylde Council's reference to Ribby Hall Village as the Grade II listed building known as Ribby Hall, when in fact it was a reference to a holiday village to the west of the site. It was clear from my site visit that the listed building is heavily screened from the site by vegetation and holiday homes such that there would be no effect on its special interest from the development of a new prison. **[7.64, 8.45, 9.57(k)(m)]**

¹²⁷ CD A3 including paragraphs 7.37 to 7.44, 9.15, 9.29 and 10.6

¹²⁸ CD C2 paragraph 5.4

¹²⁹ CD E2 paragraphs 6.4 to 6.17, 6.19, 7.68 and 10.24

¹³⁰ CD K1 paragraph 29

- 13.63. Fylde Council expressed concerns about the highway access off the A583, which is a bypass for Kirkham and dual carriageway past the site. However, the Council advised further pre-application discussions with the LHA on this matter. The appellant confirmed in response to my question at the Inquiry that no such discussions have taken place. **[7.64, 9.57(n)]**
- 13.64. Subject to those discussions, it is possible that Kirkham would have better connection to the road network than the appeal site via the A583. Kirkham has bus and train services that could be more easily accessed on foot than the appeal site. There are no absolute landscape, design or ecology constraints. A higher local unemployment rate than Chorley could mean that the scheme would provide greater local economic benefits. There would be no loss of a playing field. **[9.57(l)(o)(p)(q)(r)]**
- 13.65. It is understandable that the appellant pursued the appeal site over Kirkham due to the different pre-application responses and the likelihood that a planning application to Fylde Council may well have ended up at appeal. However, this proposal has ended up at appeal too and it is an insufficient argument to say that a negative letter justified ruling out Kirkham when there appear to be no insurmountable issues. The fact that starting again with an application for Kirkham would delay the delivery of a new prison does not automatically justify this proposal, which needs to be assessed on its own merits. **[7.65, 7.66, 8.45, 9.57(j), 9.60]**
- 13.66. The Stakehill site is a 71.8ha greenfield site to the south-east of the existing industrial estate on the Oldham and Rochdale border, bounded by the A627(M) to the east and a railway line to the west. The site is a draft employment allocation in the Greater Manchester Places for Everyone development plan as a Green Belt release. The plan's examination is underway and it may not be adopted until 2024. This would not preclude a planning application at this stage, but it could be refused on the grounds of prematurity and add delay to the delivery of a prison. It is also a very large site that would need to be properly master planned to integrate a new prison. However, its emerging development plan status indicates that the principle of development in this Green Belt location is likely to be acceptable. There has also been no discussion with the local authority on the principle of a prison development here, despite Oldham Council drawing the site to the appellant's attention. **[7.67, 8.44, 9.57(a)-(c)]**
- 13.67. The Stakehill site currently has limited connections to the road network, but given its promotion as a strategic employment allocation, it seems likely that access issues could be resolved, perhaps by a link road to the existing industrial estate rather than a costly new motorway junction. Such a link would also allow access to a regular bus service that serves the estate. Access to the train station at Mills Hill might be trickier, given that it would be across fields to the south, but this is comparable to the appeal site. There are no absolute ecological or heritage constraints and, like Kirkham, a higher local unemployment rate could generate greater local economic benefits. No playing field would be lost either **[7.68, 9.57(d)-(h)]**
- 13.68. In conclusion, from a high-level analysis, both Kirkham and Stakehill appear to be as good as the appeal site in terms of all relevant planning issues, with some advantages in terms of accessibility. There is also a reasonable prospect

that either or both sites are more appropriate than the appeal site. Therefore, I give little weight to the appellant's propositions that there is a lack of alternative sites or that there are no more appropriate sites than the appeal site. **[7.69, 8.46, 9.58, 9.61]**

Economic benefits

- 13.69. As set out in the two SOCG, the parties agree on the number of jobs and amount of investment that would be created by the proposal at the construction and operational stages. The appellant's data and evidence¹³¹ underpinning these figures was not seriously challenged at the Inquiry, even though the report by Peter Brett Associates focussed more on urban prison locations than rural ones like the appeal site. To an extent, the predicted level of jobs and investment are linked to the overall size of the proposal. However, they are also due to its complex nature where prisons require various specialist buildings and staff. **[6.4, 6.5, 7.70, 8.47, 9.37]**
- 13.70. Chorley and South Ribble have lower unemployment rates than other parts of Lancashire and the North-West, but the appellant's economics witness notes that around 50% of people live and work in these two boroughs. Therefore, whilst it is not unreasonable to conclude that around 50% of the 640 staff would be drawn from the local area, there would also be job opportunities for people in the wider county and region. Current recruitment issues at HMP Garth and Wymott are noted, but this could relate to a number of factors relating to pay and conditions that are beyond the scope of this appeal. In summary, the proposal would result in significant employment and investment. Therefore, having regard to NPPF paragraph 81, I afford significant weight to the economic benefits. **[7.70, 10.9, 11.4]**

Social benefits

- 13.71. The provision of a modern prison would enable greater social benefits for prisoners to help with their rehabilitation and reduce reoffending rates. This carries significant weight by itself. However, as noted above, the extent and urgency of the need for new prison places in the North-West and the lack of alternative/more appropriate sites have not been demonstrated. These elements only carry moderate weight as a consequence. **[7.71(a)(b), 8.48]**
- 13.72. The replacement bowling green would be an of equivalent standard and the new club house would be of a better quality and more accessible than the existing facility. The new facilities would also be provided before the existing one is lost. Therefore, this can be afforded significant weight. **[7.71(c)]**
- 13.73. There would be upgrades to Pump House Lane as a public right of way along with improvements in bus and cycle provision. This would enhance sustainable transport options and improve recreational opportunities for more than just future users of the proposal. Therefore, these benefits can be afforded moderate weight in favour of the proposal. **[7.71(d), 8.48]**

¹³¹ Economic benefits note (CD E2a) and Peter Brett Associates report (CD J1)

Environmental benefits including biodiversity net gain

13.74. Even with the forthcoming requirement in the Environment Act 2021 to provide at least 10% biodiversity net gain in all applicable development, the proposed provision of 20% biodiversity net gain is notable in light of NPPF paragraph 174(d). The re-use of previously developed land within the site finds favour in national policy at NPPF paragraphs 119 and 120. The new prison would achieve a BREEAM Excellent rating with the aim of achieving a BREEAM Outstanding rating. All of these environmental benefits carry moderate weight. The absence of harm to matters such as flood risk, air quality, ecology and land contamination carry neutral weight in the overall balance. **[7.72, 7.73, 8.49, 9.38]**

Other matters

13.75. Concerns have been raised by UWAG and interested parties about the accessibility of the site. Most of the journeys to the site would be via private car, although improvements to the bus service would provide an alternative for some people. On balance, there would be some negative effects from a sustainability perspective having regard to the carbon footprint of extra car journeys, which carries moderate weight against the proposal. **[7.31, 9.34]**

13.76. Suggestions by interested parties that an alternative access could be provided via Ridley Lane to the north-west of the site have not been tested in terms of viability or effect on traffic movements. It has also not been demonstrated that the suggested reopening of Midge Hall railway station would alter travel behaviour patterns given its distance from the site and the need to still rely on private motor transport to complete the journey from the station. I have made my assessment on the basis of the scheme as submitted. **[7.34, 10.5, 10.12, 10.13]**

13.77. Only 6% of the site area represents best and most versatile agricultural land and only at grade 3a. Despite the importance of farming, its loss would attract limited weight against the proposal. The minerals covered by the safeguarding area cannot be extracted due to the existing land uses and so their loss only attracts limited weight. The need for the development would outweigh the harm such that there would be no conflict with MWSA Policy M2. **[6.22, 6.23, 9.33]**

13.78. The loss of areas of mature woodland in the northern part of the site would be offset by replacement tree planting resulting in an overall neutral effect even though in the short-term there would be fewer trees. In a similar fashion, the loss of trees and other habitats would have a short to medium term adverse effect on ecology that would be balanced in the longer term by the proposed biodiversity net gain measures. Survey work has been carried out to identify the presence of protected species such as bats and barn owls. Conditions are proposed that would require the updating of method statements for amphibians and water voles and the submission of detailed mitigation strategies to safeguard roosting and nesting sites. New or replacement habitats would also be provided (including for the loss of a barn owl nest) that would be secured by condition. Thus, there are no long-term ecological effects that would count against the proposal. **[6.17, 6.18, 9.33, 11.1]**

- 13.79. Any disturbance of protected species would likely require a licence from Natural England before works could begin. The licence does not need to be provided before planning permission is granted, but there must be a reasonable prospect of the licence being issued. Having regard to the three derogation tests, it could be argued by the SoS that the proposal would be in the overriding public interest to provide additional prison spaces. It could also be argued that there is no satisfactory alternative to the proposal. Finally, the mitigation strategies can be secured by condition. As a consequence, the favourable conservation status of the affected species would be maintained. Thus, in those circumstances, I consider there would be a reasonable prospect of Natural England granting a licence for the proposal.
- 13.80. The proposal would result in the loss of the playing field at HMP Wymott. It has not been demonstrated that the playing field is surplus to requirements, or that it would be replaced with equivalent or better provision in a suitable location. Notwithstanding the security issues raised by the appellant and the condition of the playing field, I consider that its loss would be contrary to NPPF paragraph 99 and CLP Policy HW2. The loss of the playing field carries moderate weight against the proposal. **[6.16, 9.33, 11.2]**
- 13.81. One of the structures associated with the non-designated heritage asset known as the former Ministry of Supply depot would be removed as part of this proposal. Seven have already been removed as part of previous prison development. 14 structures would remain in the landscape to the north of the site which comprised a large part of the former depot. There would be minor harm as a result of the loss which would need to be weighed in the overall balance in line with NPPF paragraph 203. **[6.20, 9.33]**
- 13.82. The former depot use has raised concerns from some interested parties about contaminated land issues. However, the site assessment work has not identified anything insurmountable that could not be addressed via a suitably worded planning condition. Thus, this is a neutral matter in the overall balance. **[6.21, 11.4]**
- 13.83. It is evident that there have been surface water flooding issues on Moss Lane, based on photographs from interested parties. The appellant suggests that this is the result of topography and possible drainage failure. The surface water drainage scheme for the proposal has been designed to avoid any adverse off-site effects and so there would be no worsening of any existing flooding issues. In addition, the built form of the proposal would be located entirely within Flood Zone 1. Thus, there are no flood risk issues to be weighed in the overall balance. **[6.19, 11.1]**
- 13.84. Interested parties have referred to anti-social behaviour and criminal activities associated with the existing prisons and expressed fears that this would increase with an additional prison. This is a matter for the relevant authorities to address, along with concerns about the conditions for prisoners within the existing prisons. Effects of the construction phase on people's health and well-being, including dust and air pollution, can be mitigated via a management plan secured by condition. Negative air quality issues are not anticipated in the operational phase and so no mitigation is required. The illumination of the development could be controlled through a lighting condition. **[6.15, 10.4, 11.1, 11.3]**

13.85. There is little information to verify concerns that local schools and doctors would be unable to accommodate new staff and their families. Public consultation took place in June and July 2021 and was advertised to local residents beforehand¹³². It has not been demonstrated that this consultation was insufficient. **[10.4, 11.1]**

Planning balance and very special circumstances

13.86. NPPF paragraph 147 states that inappropriate development is, by definition, harmful to the Green Belt and should not be approved except in very special circumstances. NPPF paragraph 148 advises that substantial weight should be given to any harm to the Green Belt and that very special circumstances will not exist unless the potential harm to the Green Belt by reason of inappropriateness, and any other harm arising from the proposal, is clearly outweighed by other considerations. In the parties' closing submissions, the appellant's proposition that the other considerations do not have to be unique was not contested. **[7.3, 7.4, 8.35, 9.1]**

13.87. The proposal would represent inappropriate development in the Green Belt and would result in significant harm to Green Belt openness and significant conflict with one of the Green Belt purposes. This carries substantial weight against the proposal. Significant weight should be given to the harm to the character and appearance of the area. My finding of unacceptable harm to highway safety should carry substantial weight given that NPPF paragraph 111 indicates that proposals can be refused on this basis.

13.88. Moderate weight should be afforded to the negative sustainability credentials of the site in terms of accessibility by means other than the private car. The loss of the playing field carries moderate weight, while minor weight should be given to the harm to the non-designated heritage asset. Limited weight should be attributed to the loss of agricultural land and mineral safeguarding area.

13.89. Significant weight should be afforded to the economic benefits and moderate weight afforded to the environmental benefits. Moderate weight should be given to the proposed enhancements to sustainable transport options. While the provision of a modern prison and a replacement of a bowls facility carry significant weight, the other considerations relating to urgent need and the lack of alternative or more appropriate sites only carry moderate weight. Drawing this all together, my overall assessment is that the benefits would not clearly outweigh the harm to the Green Belt and the other harms that I have identified. As a consequence, the very special circumstances necessary to justify the proposal do not exist. **[7.74-7.76, 8.50, 9.62]**

13.90. In conclusion, the proposal would harm the Green Belt, the character and appearance of the area, and highway safety. It would conflict with CLP Policies BNE1 and HW2, and NPPF paragraphs 110, 111, 147 and 148. This points towards the refusal of planning permission. **[7.76, 8.50, 9.63]**

¹³² CD A27

14. Inspector's Recommendation

- 14.1. For the reasons set out above, I recommend that this appeal be dismissed.
- 14.2. Nonetheless, if the SoS is minded to disagree with my recommendation and allow the appeal, then the conditions listed in Annex 1 should be attached to any permission granted along with the obligations set out in the S106 agreement in CD K27. In these circumstances, I would recommend imposition of Condition 4B rather than Condition 4A for the reasons given above.

Tom Gilbert-Wooldridge

INSPECTOR

Annex 1: Suggested Conditions (34)Conditions relating to the outline parts of the permission:

- 1) An application for approval of the reserved matters, namely the appearance, layout, and scale of phases 1 and 4 and the appearance, layout, scale and landscaping of phase 3 of the development hereby permitted, as set out on the Site Phasing Plan, shall be made to the Local Planning Authority before the expiration of three years from the date of this permission and the development hereby permitted shall be begun two years from the date of approval of the last of the reserved matters to be approved.

Reason: To meet the requirements of Section 92 of the Town and Country Planning Act 1990 (as amended).

- 2) The development hereby permitted shall be carried out in accordance with the following approved plans:

Site Location Plan	608623-0000-PEV-GHX0011-ZZ-DR-A-9000 Rev.P05
Site Phasing Plan	608623-0000-PEV-GHX0011-ZZ-DR-A-9400 Rev.P05
Comprehensive Landscape Masterplan	608623-0000-PEV-GHX0011-XX-DR-L-0301 Rev.P06
Site Demolition Plan	608623-0000-PEV-GHX0011-ZZ-DR-A-9002 Rev.P05
Proposed New Access	GARTH-ATK-HGN-MOSS-DR-D-0001 P2

Reason: For the avoidance of doubt and in the interests of proper planning.

- 3) No part of the development under phase 4 hereby approved shall commence until a scheme for the off-site works of highway improvement has been submitted to and approved in writing by the Local Planning Authority in consultation with the Highway Authority.

Reason: To satisfy the Local Planning Authority and Highway Authority that the final details of the highway scheme/works are acceptable before work commences on site.

- 4) **EITHER 4A:**

No part of the development under phase 4 hereby approved shall be occupied until the approved scheme for the construction of the site access and the off-site works of highway improvement has been constructed and completed in accordance with the scheme details.

For the avoidance of doubt, this shall include the construction and completion of the A581 Corridor Improvement Scheme.

Reason: In order that the traffic generated by the development does not exacerbate unsatisfactory highway conditions in advance of the completion of the highway scheme/works

OR 4B:

(a) No part of the development under phase 4 hereby approved shall be commenced until the approved scheme for the construction of the off-site works of highway improvement has been constructed and completed in accordance with the scheme details.

For the avoidance of doubt, this shall include the construction and completion of the A581 Corridor Improvement Scheme.

(b) No part of the development under phase 4 hereby approved shall be occupied until the approved scheme for the construction of the operational site access has been constructed and completed in accordance with the scheme details.

Reason: In order that the traffic generated by the development, including at the construction phases, does not exacerbate unsatisfactory highway conditions in advance of the completion of the highway scheme/works

- 5) Prior to the commencement of the development under phase 4 hereby approved, full details of the pedestrian/cycle connection to the site from Nixon Lane shall be submitted to and approved in writing by the Local Planning Authority in consultation with the Highway Authority. Thereafter, the approved connection shall be provided in accordance with the approved plan prior to the first use of phase 4.

Reason: To ensure safe and suitable access to the development for pedestrians and cyclists.

- 6) The development hereby permitted shall be carried out in broad accordance with the Flood Risk Assessment (August 2021, Ref: 608623-0000-HYD-GHX0000-XX-RP-D-0001, Hydrock) and Surface Water Drainage Strategy (August 2021, Ref: 608623-0000-PEV-GHX0011-ZZ-RP-C-0503, Pick Everard).

The measures shall be fully implemented prior to the first use or occupation of any building developed under phase 4 as set out on the Site Phasing Plan and in accordance with the approved phasing of the development.

Reason: To ensure satisfactory sustainable drainage facilities are provided to serve the site in accordance with NPPF paragraphs 167 and 169, the Planning Practice Guidance, and Defra Technical Standards for Sustainable Drainage Systems.

- 7) Prior to the commencement of the use of development within phases 3 or 4 of the development hereby permitted, or with any reserved matters relating to these phases, an operational lighting scheme shall be submitted to and approved in writing by the Local Planning Authority. The approved scheme shall thereafter be implemented prior to first use of the relevant phase in line with the approved details.

Reason: Due the presence of nearby habitat for bats.

- 8) Prior to the commencement of the development within phase 4 of the development hereby permitted, full details of the circulation routes for the

area of the site within phase 4 shall be submitted to and approved in writing by the Local Planning Authority.

Reason: To ensure safe and suitable circulation routes within the development.

Conditions relating to the full parts of the permission:

- 9) Phase 2 of the development hereby permitted in full, as set out on the Site Phasing Plan (ref. 608623-0000-PEV-GHX0011-ZZ-DR-A-9400 Rev.P05), shall be begun not later than three years from the date of this permission.

Reason: To meet the requirements of Section 91 of the Town and Country Planning Act 1990 (as amended)

- 10) The development hereby permitted shall be carried out in accordance with the following approved plans:

Site Sections - Proposed	608623-0000-PEV-GHX0031-ZZ-DR-A-9201 Rev.P04
Site Block Plan - Proposed	608623-0000-PEV-GHX0031-ZZ-DR-A-9100 Rev.P04
Roof Plan - Proposed	608623-0000-PEV-GHX0031-R0-DR-A-9301 Rev.P05
Site Plan Utilities	608623-0000-PEV-GHX0031-ZZ-DR-E-0600 Rev.P03
Proposed Highways-Proposed Surface Water Drainage	608623-0000-PEV-GHX0031-ZZ-DR-C-0502 Rev.P02
Proposed Highways-Long Sections	608623-0000-PEV-GHX0031-ZZ-DR-C-0701 Rev.P02
Proposed Highways-General Arrangement Plan	608623-0000-PEV-GHX0031-ZZ-DR-C-0700 Rev.P02
Proposed Highways-Cross Sections	608623-0000-PEV-GHX0031-ZZ-DR-C-0702 Rev.P02
Ground Floor Plan - Proposed	608623-0000-PEV-GHX0031-00-DR-A-9300 Rev.P03
Elevations - Proposed	608623-0000-PEV-GHX0031-ZZ-DR-A-9400 Rev.P03
Drainage Details - Sheet 01	608623-0000-PEV-GHX0031-ZZ-DR-C-6501 Rev.P01
Bowling Green Landscape Proposals	608623-0000-PEV-GHX0031-XX-DR-L-0405 Rev.P03
Bowling Green External Lighting Layout – Sheet 01	608623-0000-PEV-GHX0031-ZZ-DR-E-6310 Rev.P02

Bowling Green External Lighting Layout – Sheet 02	608623-0000-PEV-GHX0031-ZZ-DR- E-6311 Rev.P02
--	--

Reason: For the avoidance of doubt and in the interests of proper planning.

- 11) Prior to the commencement of the use of phase 2 of the development hereby permitted a schedule of maintenance of the bowling green, including a programme for implementation for a minimum period of five years starting from the commencement of use of the development, shall have been submitted to and approved in writing by the Local Planning Authority. Following the commencement of use of the development the approved schedule shall be complied with in full.

Reason: To ensure that the playing field is first established as a functional playing field to an adequate standard and is fit for purpose.

- 12) Prior to the commencement of phase 2 of the development hereby permitted the following documents shall have been submitted to and approved in writing by the Local Planning Authority:
- (a) A detailed assessment of ground conditions (including drainage and topography) of the land proposed for the playing field which identifies constraints which could adversely affect playing field quality; and
- (b) Where the results of the assessment to be carried out pursuant to (a) above identify constraints which could adversely affect playing field quality, a detailed scheme to address any such constraints shall be submitted to and approved in writing by the Local Planning Authority. The scheme shall include a written specification of the proposed soils structure, proposed drainage, cultivation and other operations associated with grass and sports turf establishment and a programme of implementation.

Prior to the commencement of the use of phase 2 of the development hereby permitted the following documents shall have been submitted to and approved in writing by the Local Planning Authority:

- (c) Full details of the proposed flood lighting scheme for the bowling green.
- The approved details in (b) and (c) shall thereafter be carried out in full and in accordance with the approved programme of implementation. The land shall thereafter be maintained in accordance with the scheme and made available for playing field use in accordance with the scheme.

Reason: To ensure that the playing field is first established as a functional playing field to an adequate standard and is fit for purpose.

- 13) All planting, seeding or turfing comprised in the approved details of landscaping set out on the Bowling Green Landscape Proposals (ref. 608623-0000-PEV-GHX0031-XX-DR-L-0405 Rev.P03) shall be carried out in the first planting and seeding seasons following the first use of the Bowling Green or club house facilities, or the completion of phase 2 of the development, whichever is the sooner, and any trees or plants which within a period of five years from the completion of the development die, are removed or become seriously damaged or diseased shall be replaced in the next planting season with others of similar size and species, unless the Local Planning Authority gives written consent to any variation.

Reason: In the interest of the appearance of the locality.

- 14) The approved car parking provision as set out on Site-Block Plan (ref. 608623-0000-PEV-GHX0031-ZZ-DR-A-9100 Rev.P04) shall have been constructed and laid out in accordance with the approved details prior to the first use of the Bowling Green or club house facilities and retained at all times thereafter specifically for this purpose.

Reason: To ensure that that the site is adequately served by parking and disabled parking and that motorcycle and bicycle parking is sufficiently provided.

- 15) The external facing materials of the bowling club buildings and structures as detailed on the approved plans shall be used and no others substituted.

Reason: To ensure that the materials used are visually appropriate to the locality.

- 16) The floodlighting to the bowling green hereby permitted shall only operate between 10:00 hours and 22:00 hours and not at any other time.

Reason: In the interests of the rural character of the area, the amenity of the area, ecological impacts, and the amenity of nearby residential properties.

- 17) Notwithstanding the approved details, a fully detailed lighting scheme to include all necessary highways illumination, pedestrian footways and any other external lighting to the building shall be submitted to and approved in writing by the Local Planning Authority prior to the occupation of phase 2 of the development hereby permitted. The approved scheme shall thereafter be implemented in line with the approved details.

Reason: Due the presence of nearby habitat for bats.

- 18) No surface water run-off from the bowling club (phase 2) element of the scheme shall at any time be directed into any nearby ponds.

Reason: The existing pond is a Priority Pond and supports protected species and it is likely that the newly created ponds will colonise with great crested newts.

General conditions:

- 19) Notwithstanding the landscaping details set out on the Comprehensive Landscape Masterplan (ref. 608623-0000-PEV-GHX0011-XX-DR-L-0301 Rev.P06), no development shall commence in phase 4 until a detailed scheme of soft landscaping has been submitted to and approved in writing by the Local Planning Authority. This shall include the location of all existing trees and hedgerows affected by the proposed development, details of those to be retained and details of species to be planted and planting density.

All of the approved planting, seeding or turfing shall thereafter be carried out in the first planting and seeding seasons following the first use of the occupation of any buildings permitted under phase 4 or the completion of phase 4 of the development hereby permitted, whichever is the sooner, and any trees or plants which within a period of five years from the completion of the development die, are removed or become seriously damaged or diseased shall be replaced in the next planting season with others of similar

size and species, unless the Local Planning Authority gives written consent to any variation.

Reason: In the interest of the appearance of the locality.

20) Prior to commencement of each phase of development, a Construction Management Plan for that phase shall have been submitted to and approved in writing by the Local Planning Authority in consultation with the Highway Authority. The approved Plan shall be adhered to throughout the construction period. The Plan shall provide for:

- the parking of vehicles of site operatives and visitors;
- the hours of operation (including deliveries) during construction;
- the loading and unloading of plant and materials;
- the storage of plant and materials used in constructing the development;
- the siting of cabins;
- the erection and maintenance of security hoarding including decorative displays and facilities for public viewing, where appropriate;
- wheel washing facilities;
- a dust management plan including measures to control the emission of dust and dirt during construction;
- a scheme for recycling/disposing of waste resulting from demolition and construction works;
- the routing of construction vehicles and deliveries to site; and
- an engagement strategy with local residents.

Reason: In the interest of highway safety and to protect the amenities of the nearby residents.

Pre-Commencement Reason: To ensure that details relating to the construction phase are agreed before works begin.

21) The Outline Travel Plan (608623-0000-ATK-GHX0000-XX-RP-X-0002 P04) as agreed must be implemented in full in accordance with the timetable within it. All elements shall continue to be implemented at all times thereafter for a minimum of five years.

Prior to the first use of phase 4 of the development hereby permitted, a Full Travel Plan shall be submitted to, and approved in writing by, the Local Planning Authority. The Full Travel Plan shall be developed in accordance with the agreed Outline Travel Plan.

All elements of the Full Travel Plan shall be implemented after the first use of phase 4 of the development hereby approved and at all times thereafter for a minimum of period of five years following completion of the development

Reason: To ensure that the development provides sustainable transport options.

- 22) No above ground development shall commence in phases 2, 3 or 4 until a detailed, final surface water sustainable drainage strategy for the relevant phase of the site has been submitted to, and approved in writing by, the Local Planning Authority.

The detailed sustainable drainage strategy shall be based upon the site-specific flood risk assessment and indicative sustainable drainage strategy submitted and sustainable drainage principles and requirements set out in the National Planning Policy Framework, Planning Practice Guidance and Defra Technical Standards for Sustainable Drainage Systems. No surface water shall be allowed to discharge to the public foul sewer(s), directly or indirectly.

Those details shall include, as a minimum:

- (a) Sustainable drainage calculations for peak flow control and volume control (1 in 1, 1 in 30 and 1 in 100 + 40% climate change), with allowance for urban creep.
- (b) Final sustainable drainage plans appropriately labelled to include, as a minimum:
 - (i) Plan identifying areas contributing to the drainage network, including surface water flows from outside the curtilage as necessary;
 - (ii) Sustainable drainage system layout showing all pipe and structure references, dimensions and design levels;
 - (iii) Details of all sustainable drainage components, including landscape drawings showing topography and slope gradient as appropriate;
 - (iv) Flood water exceedance routes in accordance with Defra Technical Standards for Sustainable Drainage Systems;
 - (v) Finished Floor Levels (FFL) in AOD with adjacent ground levels for all sides of each building to confirm minimum 150mm+ difference for FFL;
 - (vi) Details of proposals to collect and mitigate surface water runoff from the development boundary; and
 - (vii) Measures taken to manage the quality of the surface water runoff to prevent pollution, protect groundwater and surface water, and deliver suitably clean water to sustainable drainage components.
- (c) Evidence of an assessment of the site conditions to include site investigation and test results to confirm infiltrations rates and groundwater levels in accordance with industry guidance.

The sustainable drainage strategy shall be implemented in accordance with the approved details.

Reason: To ensure satisfactory sustainable drainage facilities are provided to serve the site in accordance with NPPF paragraphs 167 and 169, the Planning Practice Guidance and Defra Technical Standards for Sustainable Drainage Systems.

- 23) No above ground development shall commence in phases 2, 3 or 4 until a Construction Surface Water Management Plan for that phase detailing how surface water and pollution prevention will be managed during each construction phase has been submitted to and approved in writing by the Local Planning Authority.

Those details shall include for each phase, as a minimum:

- (a) Measures taken to ensure surface water flows are retained on-site during construction phase(s) and if surface water flows are to be discharged they are done so at a restricted rate to be agreed with Lancashire County Council as the Lead Local Flood Authority.
- (b) Measures taken to prevent siltation and pollutants from the site into any receiving groundwater and/or surface waters, including watercourses, with reference to published guidance.

The development shall be constructed in accordance with the approved details.

Reason: To ensure that the development is served by satisfactory arrangements for the disposal of surface water during each construction phase so it does not pose an undue flood risk on site or elsewhere; and to ensure that any pollution arising from the development as a result of the construction works does not adversely impact on existing or proposed ecological or geomorphic condition of water bodies.

- 24) No building on phases 2, 3 or 4 (or within an agreed implementation schedule) of the development hereby permitted shall be occupied until a Verification Report and Operation and Maintenance Plan for the lifetime of that phase of the development, pertaining to the surface water drainage system and prepared by a suitably competent person, has been submitted to and approved by the Local Planning Authority.

The Verification Report must demonstrate that the sustainable drainage system has been constructed as per the agreed scheme (or detail any minor variations), and contain information and evidence (including photographs) of details and locations (including national grid reference) of inlets, outlets and control structures; landscape plans; full as built drawings; information pertinent to the installation of those items identified on the critical drainage assets drawing; and the submission of a final 'operation and maintenance manual' for the sustainable drainage scheme as constructed.

Details of appropriate operational, maintenance and access requirements for each sustainable drainage component are to be provided, with reference to published guidance, through an appropriate Operation and Maintenance Plan for the lifetime of the development as constructed. This shall include arrangements for adoption by an appropriate public body or statutory undertaker, and/or management and maintenance by a Management Company and any means of access for maintenance and easements, where applicable. Thereafter the drainage system shall be retained, managed and maintained in accordance with the approved details.

Reason: To ensure that flood risks from the development to the future users of the land and neighbouring land are minimised, together with those

risks to controlled waters, property and ecological systems, and to ensure that the development as constructed is compliant with and subsequently maintained pursuant to the requirements of NPPF paragraph 167.

- 25) Prior to the commencement of the development, an updated method statement setting out Reasonable Avoidance Measures (RAMS) in relation to amphibians and water voles throughout the course of the development hereby approved shall be submitted to and approved in writing by the Local Planning Authority. The RAMS shall include pre-commencement surveys of the pond and two ditches (P34 and Ditches 1, 2 and 3) prior to their clearance and shall include timing and pumping out strategies. The development shall thereafter be carried out in full accordance with the approved RAMS.

Reason: Due to the potential for disturbance of great crested newts and water voles.

Pre-Commencement Reason: To update survey information on these protected species before works commence.

- 26) No phase of development shall take place (including demolition, ground works, vegetation clearance) until a Plan for Biodiversity Management during Construction (PBMC) for that phase has been submitted to and approved in writing by the Local Planning Authority. The PBMC shall include the following:

- (a) Risk assessment of potentially damaging construction activities;
- (b) Identification of "biodiversity protection zones";
- (c) Practical measures (both physical measures and sensitive working practices) to avoid or reduce impacts during construction (may be provided as a set of method statements);
- (d) The location and timing of sensitive works to avoid harm to biodiversity features;
- (e) The times during construction when specialist ecologists need to be present on site to oversee works;
- (f) Responsible persons and lines of communication;
- (g) The role and responsibilities on site of an ecological clerk of works or similarly competent person;
- (h) Use of protective fences, exclusion barriers and warning signs;
- (i) Details of how each RAMS integrates with the relevant phases of the implementation; and
- (j) A construction lighting strategy.

Reason: To protect against harm to bats, great crested newts, barns owls and water voles.

Pre-Commencement Reason: To ensure that appropriate plans are in place before any works commence.

- 27) Prior to the commencement of any works within 30m distance of the barn owl breeding (B11) and roosting site (B10) a full mitigation strategy for barn owls, which shall include timings for the implementation of measures,

shall be submitted to and approved in writing by the Local Planning Authority. The development shall thereafter be carried out in full accordance with the approved mitigation strategy.

Reason: Due to the presence of barn owls.

- 28) Prior to the commencement of any works within 30m of the identified maternity bat roost (building B15) a full mitigation strategy for bats, which shall include timings for the implementation of measures, shall be submitted to and approved in writing by the Local Planning Authority. The development shall thereafter be carried out in full accordance with the approved mitigation strategy.

Reason: Due to presence of bats.

- 29) A landscape and ecological management plan (LEMP) shall be submitted to and approved in writing by the Local Planning Authority prior to the commencement of phases 2, 3 or 4 of the development hereby approved. The content of the LEMP shall include the following:

- (a) Description and evaluation of features to be managed;
- (b) Ecological trends and constraints on site that might influence management;
- (c) Aims and objectives of management;
- (d) Appropriate management options for achieving aims and objectives;
- (e) Prescriptions for management actions;
- (f) Preparation of a work schedule (including an annual work plan capable of being rolled forward over a five-year period);
- (g) Details of the body or organization responsible for implementation of the plan;
- (h) Schedule of ongoing monitoring and remedial measures;
- (i) eDNA monitoring of P39 and the newly created ponds to demonstrate successful enhancement;
- (j) Schedule of biodiversity enhancement measures and timetable for delivery; and
- (k) A mechanism of reporting to the Local Planning Authority/their identified agent and remediation agreement process.

The LEMP shall also include details of the legal and funding mechanism(s) by which the long-term implementation of the plan will be secured by the developer with the management body(ies) responsible for its delivery. The plan shall also set out (where the results from monitoring show that conservation aims and objectives of the LEMP are not being met) how contingencies and/or remedial action will be identified, agreed and implemented so that the development still delivers the fully functioning biodiversity objectives of the originally approved scheme. The approved plan will be implemented in accordance with the approved details.

Reason: To mitigate against the reduction in scale of the biological heritage site as a result of the development proposals and to deliver a net gain for biodiversity.

- 30) Prior to the commencement of phases 2, 3 or 4 of the development a phasing plan for the delivery of the Biodiversity Net Gain habitats shall be submitted and approved in writing by the Local Planning Authority. The landscaping shall thereafter be implemented in line with the approved phasing plan.
- Reason: To deliver biodiversity net gain benefits at the earliest opportunity and as the development progresses.
- 31) No works to trees or hedgerows shall occur or building works commence between the 1st March and 31st August in any year unless a detailed bird nest survey by a suitably experienced ecologist has been carried out immediately prior to clearance and written confirmation provided that no active bird nests are present which has been agreed in writing by the Local Planning Authority.
- Reason: Nesting birds are a protected species.
- 32) The development hereby approved shall be carried out in accordance with the details contained in the approved Tree Protection Plan (Ref. 13498/P03) and Arboricultural Method Statement (Ref. 13498/P04) received 24 August 2021. All remaining trees must be fully safeguarded in accordance with BS5837.2012 for the duration of the site works.
- Reason: To safeguard the trees to be retained.
- 33) No development, site clearance/preparation, or demolitions shall take place in any phase on the site until the applicant, or their agent or successors in title, has secured the implementation of a programme of building recording and analysis relevant to that phase of development. This must be carried out in accordance with a written scheme of investigation, which shall first have been submitted to and approved in writing by the Local Planning Authority. The programme of works shall comprise the creation of a record of the building(s) to Level 2-3 as set out in 'Understanding Historic Buildings' (Historic England 2016). It shall include a full description of the building(s), inside and out, a drawn plan, elevations and at least one section (which may be derived from checked and corrected architect's drawings), and full photographic coverage, inside and out. The record shall also include further documentary research, putting the building(s) and its features into context. This work shall be undertaken by an appropriately qualified and experienced professional contractor to the standards and guidance of the Chartered Institute for Archaeologists (www.archaeologists.net). A digital copy of the report and the photographs shall be placed in the Lancashire Historic Environment Record.
- Reason: To ensure and safeguard the recording and inspection of matters of archaeological/historical importance associated with the buildings/site.
- Pre-Commencement Reason: To ensure that appropriate measures for recording and inspecting are implemented before works begin.
- 34) No development in phases 2, 3 or 4 of the development shall take place until:
- (a) a methodology for investigation and assessment of ground contamination has been submitted to and approved in writing by the Local Planning Authority. The investigation and assessment shall be

carried in accordance with current best practice including British Standard 10175:2011+A2:2017 Investigation of potentially contaminated sites - Code of Practice. The objectives of the investigation shall include identifying the type(s), nature and extent of contamination present, the risks to receptors, and the potential for migration within and beyond the site boundary;

(b) all testing specified in the approved scheme (submitted under (a)) and the results of the investigation and risk assessment, together with remediation proposals to render the site capable of development have been submitted to the Local Planning Authority; and

(c) the Local Planning Authority has given written approval to any remediation proposals (submitted under (b)), which shall include an implementation timetable and monitoring proposals. Upon completion of remediation works a validation report containing any validation sampling results shall be submitted to the Local Authority.

Thereafter, the development shall only be carried out in full accordance with the approved remediation proposals.

Should, during the course of the development, any contaminated material other than that referred to in the investigation and risk assessment report and identified for treatment in the remediation proposals be discovered, then the development shall cease until such time as further remediation proposals have been submitted to and approved in writing by the Local Planning Authority.

Reason: Due to past processes and activities at or adjacent to the application site, there is a potential for ground contamination and it is the applicants responsibility to properly address any land contamination issues, to ensure the site is suitable for the proposed end-use.

Annex 2: Appearances

For the Appellant:

Jenny Wigley KC and Anjoli Foster of Counsel, instructed by Helen Robinson of Womble Bond Dickinson.

They called:

Stephen Yeates BSC (Hons) MSc CMILT	Atkins Ltd
Eddy Goldsmith BEng MIOA	Hydrock Consultants Ltd
Katie Machin BSc PGDip CMLI	Pegasus Group
Robin Seaton	HM Prison and Probation Service
Katrina Hulse BA (Hons) MA MRTPI	Cushman & Wakefield
Claire Pegg	Cushman & Wakefield
Helen Robinson	Womble Bond Dickinson
Chris Gleed-Owen BSc PHD MCIEEM	CGO Ecology Ltd
Danny Hope BSc (Hons) MSc SiLC	Hydrock Consultants Ltd
Graham Harker BSc CEng MIAQM MIEnvSc	Ramboll UK Ltd
Rikesh Patel BA (Hons)	Pick Everard

For the Council:

Piers Riley-Smith¹³³ of Counsel, instructed by Alex Jackson of Chorley Borough Council.

He called:

Kevin Riley	WSP
Tamsin Cottle	Planning and Design Group
Iain Crossland	Chorley Borough Council

For Ulnes Walton Action Group (UWAG):

Josef Cannon, Matthew Wyard and Jack Barber of Counsel, instructed pro bono through Advocate.

They called:

Jackie Copley BA (Hons) MA PGCert (UD) MRTPI	Planning consultant
--	---------------------

¹³³ On Day 1, Mark Howells of Counsel stood in for Mr Riley-Smith

Lynette Morrissey	UWAG
Emma Curtis	UWAG
Paul Parker	UWAG

Interested Parties who spoke at the Inquiry:

Councillor Mary Green	South Ribble Borough Council
Councillor Michael Green	South Ribble Borough Council and Lancashire County Council
Katharine Fletcher MP	Member of Parliament for South Ribble
